

General description

The aim of this document is to give a description of Murata's Embedding & wirebondable Silicon Capacitor (EMSC) characteristics for Embedding or Chip On Board (COB) assembly solutions.

The EMS Capacitor targets power supplies decoupling and filtering of active devices. This version is a single 100nF capacitor in 0605 package size.

100nF EMSC Capacitor targets filtering and decoupling in high reliability applications with space constraint.

100nF EMSC Capacitor is using our PICS3-HV process which allows it to operate under 16V at 100°C (10years)

EMSC Capacitor is based on Silicon Integrated Passive technology could operate up to 250°C on request.

Assembly: This Capacitor is designed to support wire bond on lead frame applications, as well for embedding inside PCB.

Pads finishing: Aluminum. Copper pads for embedding version and Gold pads for wire bonding version, as an optional finishing.

Other capacitance values and other package size are available as a single die or capacitor array, please feel free to contact us

Key features

- High operating temperature (up to 150 °C)
- Ultra-high stability of capacitance value:
 - Temperature 70ppm/K (-55 °C to +150 °C)
 - Voltage <0.1%/Volt
 - Negligible capacitance loss through ageing
- Low profile: 100 µm
- Small size 1.59x1.32mm (0605)
- Break down voltage : 30V
- Low leakage current < 100pA
- High reliability
- ESD compatibility
- Load Dump
- Compatible with high temperature cycling during manufacturing operations (exceeding 300 °C)
- Applicable for almost embedded and wire bonding application

Key applications

- Any demanding applications, such as medical, aerospace, automotive industrial...
- Supply decoupling / filtering of active device
- High reliability applications
- High volumetric efficiency (*i.e. capacitance per unit volume*)
- Devices with battery operations
- High temperature applications

Pinning definition

Figure 2 Pin configuration

pin #	Symbol	Coordinates X / Y
1	Signal	-580 / 445
2	Signal	580 / 445
3	Signal	-580 / -445
4	Signal	580 / -445

Parts should be glued with non-conductive paste. If conductive glue is used on the backside of the silicon cap, it's strongly recommended to avoid to connect the backside to electrical signal. If backside is connected to electrical signal, this signal will absolutely be the same as pads 3-4.

Ordering Information for EMSC733.610

Regardless of packaging, Murata Integrated Passive Devices delivers products with AQL level II (0.65).

Pad Metallization

This Wirebondable and Embedding Silicon Capacitor is delivered as standard with Aluminum finishing (3µm thickness +/- 10%), with 2 pads on each terminal.

Other Metallization, such as ENIG, Copper or Thick Gold are possible on request.

Silicon dies are not sensitive to humidity, please refer to applications notes 'Assembly Notes' section 'Handling precautions and storage'.

Material regulation

This product is RoHS compliant at the time of publication. For further information about regulation compliancy, please ask your sales representative.
