650V CoolMOS™ CFD7A SJ Power Device

650V CoolMOS™ CFD7A is Infineon's latest generation of market leading automotive qualified high voltage CoolMOS™ MOSFETs. In addition to the well-known attributes of high quality and reliability required by the automotive industry, the new CoolMOS™ CFD7A series provides for an integrated fast body diode and can be used for PFC and resonant switching topologies like the ZVS phase-shift full-bridge and LLC.

Features

- Latest 650V automotive qualified technology with integrated fast body diode on the market featuring ultra low Q_{rr}
- Lowest FOM $R_{DS(on)} * Q_g$ and $R_{DS(on)} * E_{oss}$
- 100% avalanche tested
- Kelvin source contact available
- Best-in-class $R_{DS(on)}$ in SMD and THD packages

Benefits

- Optimized for higher battery voltages up to 475 V thanks to further improved robustness
- Lower switching losses enabling higher switching frequencies
- High quality and reliability
- Advanced controllability due to kelvin source
- Increased package creepage distance
- Increased efficiency in light load and full load conditions

Potential applications

- Suitable for PFC and DC-DC stages for:
- Unidirectional and bidirectional DC-DC converters,
 - On-Board battery Chargers

Product validation

Qualified according to AEC Q101

Please note: The source and sense source pins are not exchangeable. Their exchange might lead to malfunction. For production part approval process (PPAP) release we propose to share application related information during an early design phase to avoid delays in PPAP release. Please contact Infineon sales office.

Table 5 Dynamic characteristics

External parasitic elements (PCB layout) influence switching behavior significantly.

Stray inductances and coupling capacitances must be minimized.

For layout recommendations please use provided application notes or contact Infineon sales office.

¹⁾ For applications with applied blocking voltage > 475 V, we recommend to evaluate the impact of the cosmic radiation effect in early design phase. For assessment, please contact local Infineon sales office.

²⁾ We do not recommend using the CoolMOS mentioned in this datasheet to operate in "linear mode". For assessment of potential "linear mode", please contact Infineon sales office.

³⁾ $C_{o(er)}$ is a fixed capacitance that gives the same stored energy as C_{oss} while V_{DS} is rising from 0 to 400V

⁴⁾ $C_{o(tr)}$ is a fixed capacitance that gives the same charging time as C_{oss} while V_{DS} is rising from 0 to 400V
