Description

Pericom Semiconductor's PI3VDP411LS provides the ability to use a Dual-mode DP transmitter in HDMI mode. This flexibility provides the user a choice of how to connect to their favorite display. All signal paths accept AC coupled video signals. The PI3VDP411LS converts this AC coupled signal into an HDMI rev 1.3 compliant signal with proper signal swing. This conversion is automatic and transparent to the user.

The PI3VDP411LS supports up to 2.5Gbps, which provides 12-bits of color depth per channel, as indicated in HDMI rev 1.3.

TMDS Outputs

The level shifter's TMDS outputs are required to meet HDMI 1.3 specifications.
The HDMI 1.3 Specification is assumed to be the correct reference in instances where this document conflicts with the HDMI 1.3 specification.

TMDS output oscillation elimination

The inputs do not incorporate a squelch circuit. Therefore, we reccomend the input to be externally biased to prevent output oscillation. Pericom reccomends to add a 1.5Kohm pull-up to the CLK- input.
