### Description

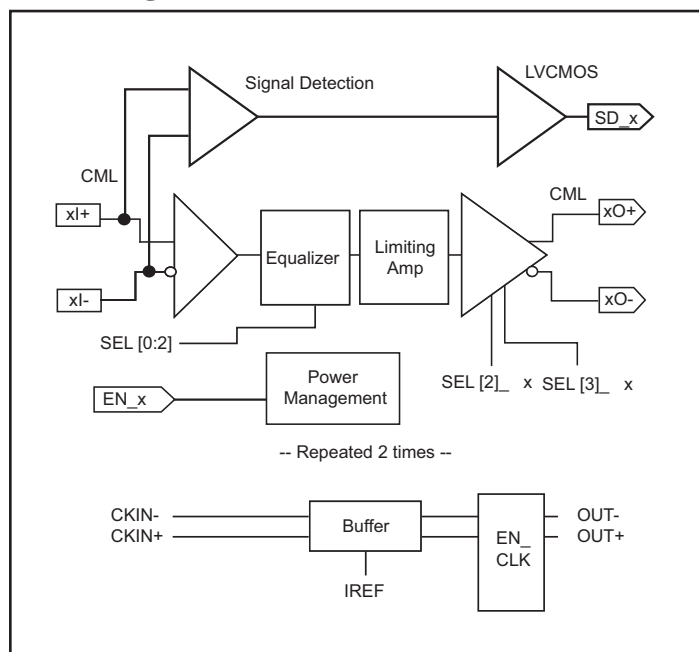

Pericom Semiconductor's PI2EQX3202B is a low power, signal ReDriver™. The device provides programmable equalization, amplification, and de-emphasis by using 7 select bits, SEL[0:6], to optimize performance over a variety of physical mediums by reducing Inter-symbol Interference. PI2EQX3202B supports four 100-Ohm Differential CML data I/O's between the Protocol ASIC to a switch fabric, across a backplane, or to extend the signals across other distant data pathways on the user's platform.

The integrated equalization circuitry provides flexibility with signal integrity of the signal before the ReDriver. Whereas the integrated de-emphasis circuitry provides flexibility with signal integrity of the signal after the ReDriver.

A low-level input signal detection and output squelch function is provided for all four channels. Each channel operates fully independently. When a channel is enabled (EN\_x=1) and operating, that channel's input signal level (on xI+/-) determines whether the output is enabled. If the input level of the channel falls below the active threshold level (V<sub>th</sub>-) then the outputs are driven to the common mode voltage.

In addition to providing signal re-conditioning, Pericom's PI2EQX3202B also provides power management Stand-by mode operated by an Enable pin.

J <sub>RM</sub>	Random Jitter <sup>(1,2)</sup>			1.5		psrms

**Notes**

- K28.7 pattern is applied differentially at point A as shown in Figure 1.
- Total jitter does not include the signal source jitter. Total jitter (TJ) = (14.1 × RJ + DJ) where RJ is random RMS jitter and DJ is maximum deterministic jitter. Signal source is a K28.5 ± pattern (00 1111 1010 11 0000 0101) for the deterministic jitter test and K28.7 (0011111000) or equivalent for random jitter test. Residual jitter is that which remains after equalizing media-induced losses of the environment of Figure 1 or its equivalent. The deterministic jitter at point B must be from media-induced loss, and not from clock source modulation. Jitter is measured at 0V at point C of Figure 1.
