Unpack the board. Verify package contents according to the kit Web site: www.freescale.com/ sensortoolbox

Assemble the hardware by connecting a development board to the interface board. Any Sensor Toolbox electrode boards, including the ones in this kit can be used with this interface board.

All Sensor Toolbox kits use the same software and driver, so the install only needs to be done once. Follow the on-screen instructions to install the communication driver for the tool. Check back occasionally for software updates. Plug in the USB and turn the board on using the power switch. Run the Sensor Toolbox link on your desktop.
