

# IW416

## Dual-band 1x1 Wi-Fi 4 and Bluetooth 5.1 Combo SoC

Rev. 4 — 25 June 2021

Product data sheet

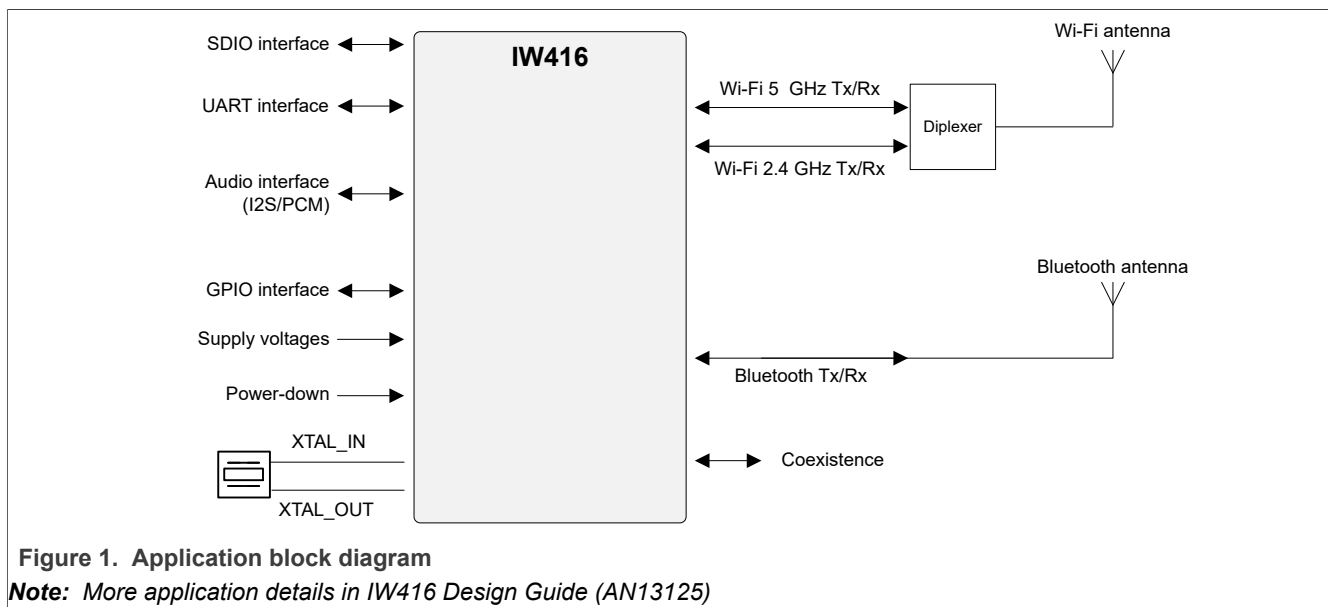

### 1 Product overview

The IW416 is a highly integrated Wi-Fi 4 and Bluetooth 5.1 System-on-Chip (SoC) enabling a low-cost connectivity solution. Supporting a 1x1 SISO Wi-Fi operation in the 2.4 GHz and the 5 GHz band, the SoC provides a full-feature Wi-Fi subsystem with a peak PHY data rate of 150 Mbit/s. In addition to classic Bluetooth features, the IW416 enables Bluetooth 5.1 capabilities including Low Energy (LE), LE long range and LE data up to 2 Mbit/s.

With integrated transmit (Tx) PAs, receive (Rx) LNAs and Tx/Rx switches for the Wi-Fi and Bluetooth radios, the IW416 simplifies design allowing quick integration of either dual or single-antenna operation. The dual-antenna configuration enables simultaneous Wi-Fi and Bluetooth operation. With the single-antenna configuration, simultaneous 5 GHz Wi-Fi and Bluetooth is supported and in the 2.4 GHz band, the single-antenna configuration allows arbitrated transmit and receive operation of Wi-Fi and Bluetooth.

Promoting synergistic operation, the IW416 implements advanced Wi-Fi and Bluetooth co-existence hardware in conjunction with algorithms to optimize collaborative performance. In addition, support for external radio co-existence (e.g. cellular) is provided through an external interface.

Available in both HVQFN68 and WLCSP76 packages with two operating temperature ranges of 0 to 70°C and -40 to 85°C, the IW416 supports a SDIO host interface for the Wi-Fi radio and a UART host interface for Bluetooth radio.

**1.1 Applications**

- Smart home: Voice assist device, smart printer, smart speaker, home automation gateway, and IP camera
- Industrial and building automation
- Asset management
- Retail/POS
- Healthcare and medical devices
- Smart city

**1.2 Wi-Fi key features**

- Support 802.11 a/b/g/n
- Dual band: 2.4 GHz and 5 GHz
- Single stream 802.11n with 20 MHz and 40 MHz channels
- Up to MCS7 data rates (150 Mbit/s)
- Dynamic Rapid Channel Switching (DRCS) for simultaneous operation in 2.4 GHz and 5 GHz bands
- Interface to coexist with 802.15.4, LTE, or other radios
- Security: WPA3, WPA2, WPA2 and WPA mixed mode, WEP

**1.3 Bluetooth key features**

- Full Bluetooth 5.1 features
- Long range - 4x coverage
- 2 Mbit/s data rate - 2x faster
- Improved advertisement capability - enables more IoT services
- I2S and PCM audio interfaces
- AES security

**1.4 Host interfaces**

Wi-Fi and Bluetooth host interface options

Wi-Fi	Bluetooth
SDIO 3.0	UART

## 1.5 Operating characteristics

- Supply voltage: 1.05V, 1.8V, and 2.2V
- Operating temperature:
  - Commercial: 0 to 70°C
  - Industrial: -40 to 85°C

## 1.6 General features

- Package options
  - HVQFN68 (68 pins, 0.4 mm pitch, 8 mm x 8 mm x 0.85 mm body)
  - WLCSP76 (76 terminals, 3.95 mm x 3.565 mm x 0.495 mm body)
- Simultaneous Wi-Fi and Bluetooth operation supported with dual antenna configuration
  - Shared Wi-Fi and Bluetooth operation with single antenna is possible
- Power saving features
  - Efficient power management system
  - Sleep and standby modes
  - Deep-sleep mode
- Independent ARM-based Wi-Fi and Bluetooth CPUs
  - Wi-Fi CPU: 160 MHz clock speed
  - Bluetooth CPU: 128 MHz clock speed
- Memory:
  - Internal SRAM
  - Boot ROM
  - OTP memory to store the MAC address and calibration data
- Peripheral Interface
  - General-Purpose I/O (GPIO) interface

1.7 Internal block diagram

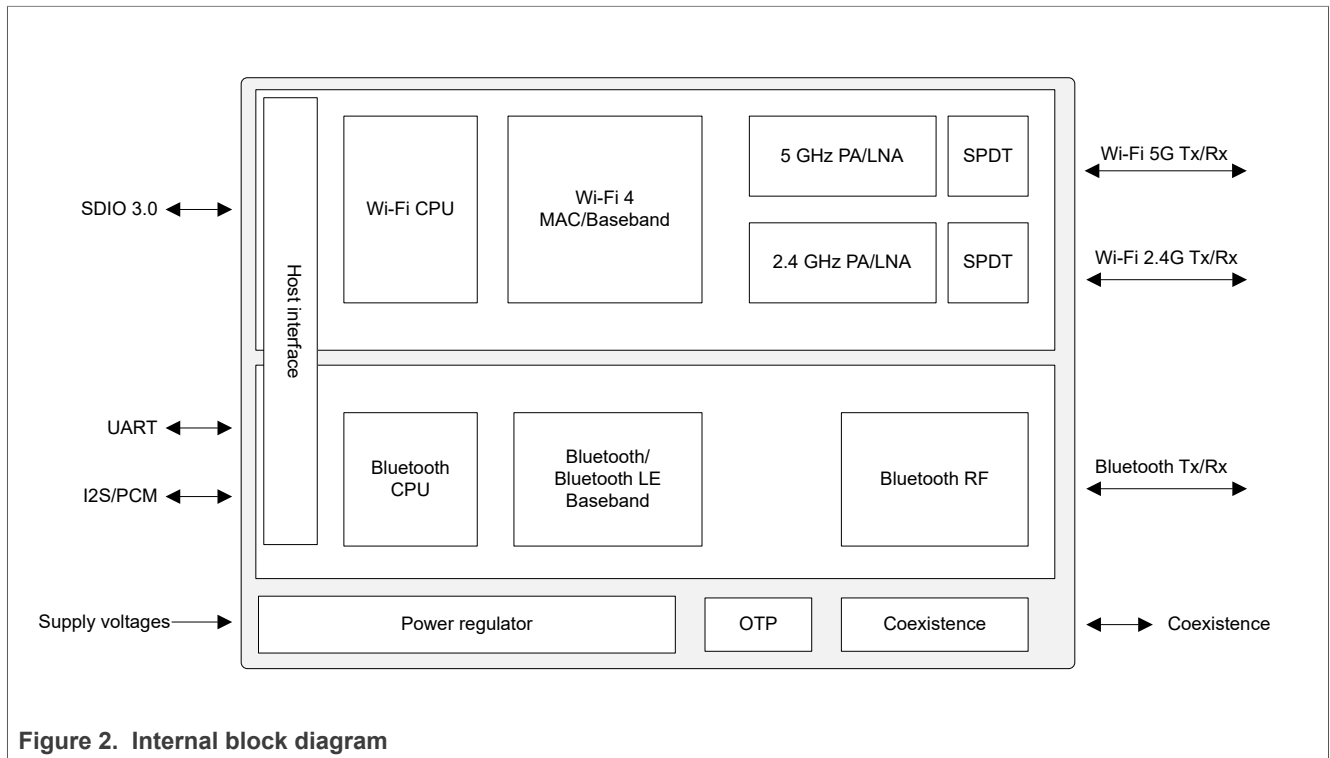

Figure 2. Internal block diagram

## 2 Ordering information

Figure 3. Part numbering scheme

Table 1. Part order codes

Part order code	Package type	Operating temperature range	Packing
IW416HN/A1CK	HVQFN68 - 8 x 8 x 0.85 mm, with 0.4 mm pitch	Commercial	Tray
IW416HN/A1CMP	HVQFN68 - 8 x 8 x 0.85 mm, with 0.4 mm pitch	Commercial	Tape and Reel
IW416HN/A1IK	HVQFN68 - 8 x 8 x 0.85 mm, with 0.4 mm pitch	Industrial	Tray
IW416HN/A1IMP	HVQFN68 - 8 x 8 x 0.85 mm, with 0.4 mm pitch	Industrial	Tape and Reel
IW416UK/A1CZ	WLCSP76 - 3.95 x 3.565 x 0.495 mm	Commercial	Tape and Reel
IW416UK/A1IZ	WLCSP76 - 3.95 x 3.565 x 0.495 mm	Industrial	Tape and Reel

## 3 Wi-Fi subsystem

### 3.1 IEEE 802.11 standards

- 802.11n maximum data rates up to 72 Mbit/s (20 MHz channel bandwidth), 150 Mbit/s (40 MHz channel bandwidth)
- 802.11a/g/b backward compatibility
- 802.11d international roaming
- 802.11e quality of service
- 802.11h transmit power control
- 802.11h DFS radar pulse detection
- 802.11i enhanced security
- 802.11k radio resource measurement
- 802.11n block acknowledgment extension
- 802.11r fast hand-off for AP roaming
- 802.11u Hotspot 2.0 (STA mode only)
- 802.11v TIM frame transmission/reception
- 802.11w protected management frames
- Fully supports clients (stations) implementing IEEE Power Save mode

### 3.2 Wi-Fi MAC

The Wi-Fi MAC has the following features:

- Simultaneous peer-to-peer and infrastructure modes
- RTS/CTS for operation under DCF
- Hardware filtering of 32 multicast addresses and duplicate frame detection for up to 32 unicast addresses
- On-chip Tx and Rx FIFO for maximum throughput
- Open System and Shared Key Authentication services
- A-MPDU Rx (de-aggregation) and Tx (aggregation)
- 20/40 MHz coexistence
- Reduced Inter-Frame Spacing (RIFS) receive
- Packet drop scheme
- Management information base counters
- Radio resource measurement counters
- Quality of service queues
- Block acknowledgment extension
- Dynamic frequency selection
- TIM frame transmission/reception
- Multiple BSS/Station
- Transmit rate adaptation
- Transmit power control
- Long and short preamble generation on a frame-by-frame basis for 802.11b frames
- NXP mobile hotspot

### 3.3 Wi-Fi baseband

The Wi-Fi baseband has the following features:

- 802.11n 1x1 SISO
- Bandwidth supported:
  - 20 MHz
  - 20 in 40 MHz (upper and lower)
  - 40 MHz
  - 20 MHz duplicate
- 802.11n modulation coding scheme (MCS) 0-7 and MCS 32 (HT duplicate mode)
- 802.11n 400 ns and 800 ns guard interval
- Dynamic frequency selection (radar detection)
  - Enhanced radar detection for long and short pulse radar
  - Enhanced AGC scheme for DFS channel
- Radio resource measurement
- Optional 802.11n SISO features:
  - 20/40 MHz coexistence
  - 1 spatial stream STBC reception
  - Short guard interval
  - RIFS on receive path for 802.11n packets
  - 802.11n greenfield Tx/Rx
- Power save features

### 3.4 Wi-Fi radio

The Wi-Fi radio has the following features:

- Integrated direct-conversion radio
- 20 MHz and 40 MHz channel bandwidths

#### Wi-Fi Rx path

- Direct conversion architecture: no need for an external SAW filter
- On-chip gain selectable LNA with optimized noise figure and power consumption
- High dynamic range AGC function in receive mode

#### Wi-Fi Tx path

- Internal PA with power control
- Optimized Tx gain distribution for linearity and noise performance

### Radio channel frequencies

The Wi-Fi RF radio integrates all the necessary functions for transmit and receive operation.

The channel frequencies are controlled through an internal bus and software programmable.

[Table 2](#) shows the frequencies supported by the 20 MHz channels.

**Table 2. Frequencies supported by 20 MHz channels**

Channel	Frequency (GHz)
1	2.412
2	2.417
3	2.422
4	2.427
5	2.432
6	2.437
7	2.442
8	2.447
9	2.452
10	2.457
11	2.462
12	2.467
13	2.472
--	--
36	5.180
40	5.200
44	5.220
48	5.240
52	5.260
56	5.280
60	5.300
64	5.320
100	5.500
104	5.520
108	5.540
112	5.560
116	5.580
120	5.600
124	5.620
128	5.640

Table 2. Frequencies supported by 20 MHz channels...continued

Channel	Frequency (GHz)
132	5.660
136	5.680
140	5.700
149	5.745
153	5.765
157	5.785
161	5.805
165	5.825
128	5.640
132	5.660
136	5.680
140	5.700
149	5.745
153	5.765
157	5.785
161	5.805
165	5.825

[Table 3](#) shows the frequencies supported by the 40 MHz channels.

Table 3. Frequencies Supported by the 40 MHz channels

Channel	Frequency (GHz)
1–5	2.422
2–6	2.427
3–7	2.432
4–8	2.437
5–9	2.442
6–10	2.447
7–11	2.452
--	--
36–40	5.190
44–48	5.230
52–56	5.270
60–64	5.310
100–104	5.510
108–112	5.550
116–120	5.590
124–128	5.630

Table 3. Frequencies Supported by the 40 MHz channels...continued

Channel	Frequency (GHz)
132–136	5.670
149–153	5.755
157–161	5.795

### 3.5 Wi-Fi encryption

- WEP 64 bit and 128 bit encryption with hardware TKIP processing (WPA)
- AES/CCMP as part of the 802.11i security standard (WPA2 and WPA mixed mode)
- AES/CMAC as part of the 802.11w security standard

### 3.6 Wi-Fi host interfaces

- SDIO 3.0 device interface

## 4 Bluetooth subsystem

### 4.1 Bluetooth 2.4 GHz Tx/Rx

- Bluetooth 5.1
- Bluetooth Class 2 and Bluetooth Class 1
- Single-ended, shared Tx/Rx path for Bluetooth
- PCM interface for voice applications
- Baseband and radio Basic Data Rate (BDR)/Enhanced Data Rate (EDR) packet types —1 Mbit/s (GFSK), 2 Mbit/s ( $\pi/4$ -DQPSK), and 3 Mbit/s (8DPSK)
- Fully functional Bluetooth baseband—Adaptive Frequency Hopping (AFH), forward error correction, header error control, access code correlation, Cyclic Redundancy Check (CRC), encryption bit stream generation, and whitening
- Adaptive Frequency Hopping (AFH) using Packet Error Rate (PER)
- Interlaced scan for faster connection setup
- Simultaneous active Asynchronous Connection-Less (ACL) connection support
- Automatic ACL packet type selection
- Full master and slave piconet support
- Scatternet support
- Bluetooth-based indoor location with up to 16 antenna support
- Standard UART HCI transport layer
- HCI layer to integrate with profile stack
- SCO/eSCO links with hardware accelerated audio signal processing and hardware supported PPEC algorithm for speech quality improvement
- All standard SCO/eSCO voice coding
- All standard pairing, authentication, link key, and encryption operations
- Standard Bluetooth power saving mechanisms (hold, sniff modes, and sniff sub-rating)
- Enhanced Power Control (EPC)
- Channel Quality Driven Data Rate (CQDDR)
- Wide Band Speech (WBS) support (2 WBS link)
- Encryption (AES) support
- Low Latency Reconnection (LLR) (future BT standard)

## 4.2 Bluetooth Low Energy (LE)

- Broadcaster, Observer, Central, and Peripheral roles
- Supports link layer topology to be master and slave (connects up to 16 links)
- Wi-Fi/Bluetooth Coexistence protocol support
- Shared RF with BDR/EDR
- Encryption (AES) support
- Intelligent Adaptive Frequency Hopping (AFH)
- LE Privacy 1.2
- LE Secure Connection
- LE Data Length Extension
- LE Advertising Extension
- 2 Mbit/s LE

## 4.3 Bluetooth host interfaces

- High-Speed UART interface up to 4 Mbit/s

## 4.4 Audio interfaces

### 4.4.1 I2S interface

- I2S (Inter-IC Sound) interface for audio data connection to Analog-to-Digital Converter (ADC)
- Master and slave modes for I2S, MSB, and LSB audio interfaces
- Tri-state I2S interface compatibility
- I2S pins shared with PCM pins

### 4.4.2 PCM interface

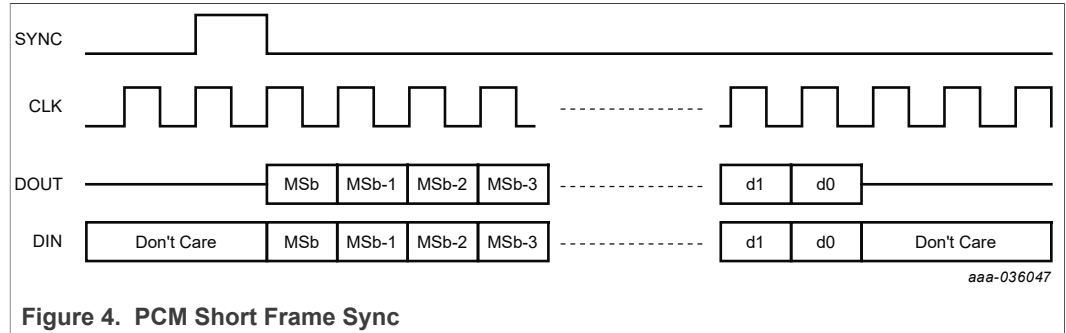

The PCM interface is used to exchange audio data between the host and the Bluetooth/LE functional block.

- Master or slave mode
- PCM bit width size of 8 bits or 16 bits
- Up to 4 slots with configurable bit width and start positions
- PCM short frame and long frame <sup>1</sup> synchronization
- Tri-state PCM interface capability
- PCM pins shared with I2S pins

<sup>1</sup> In PCM Master mode, PCM long frame synchronization is 1 clock wide. In PCM Slave mode, PCM Master's long frame synchronization pattern is supported.

4.4.2.1 Protocol description

The PCM interface supports short frame sync. [Figure 4](#) shows an example of a PCM interface with 4 signals.

4.5 Coexistence

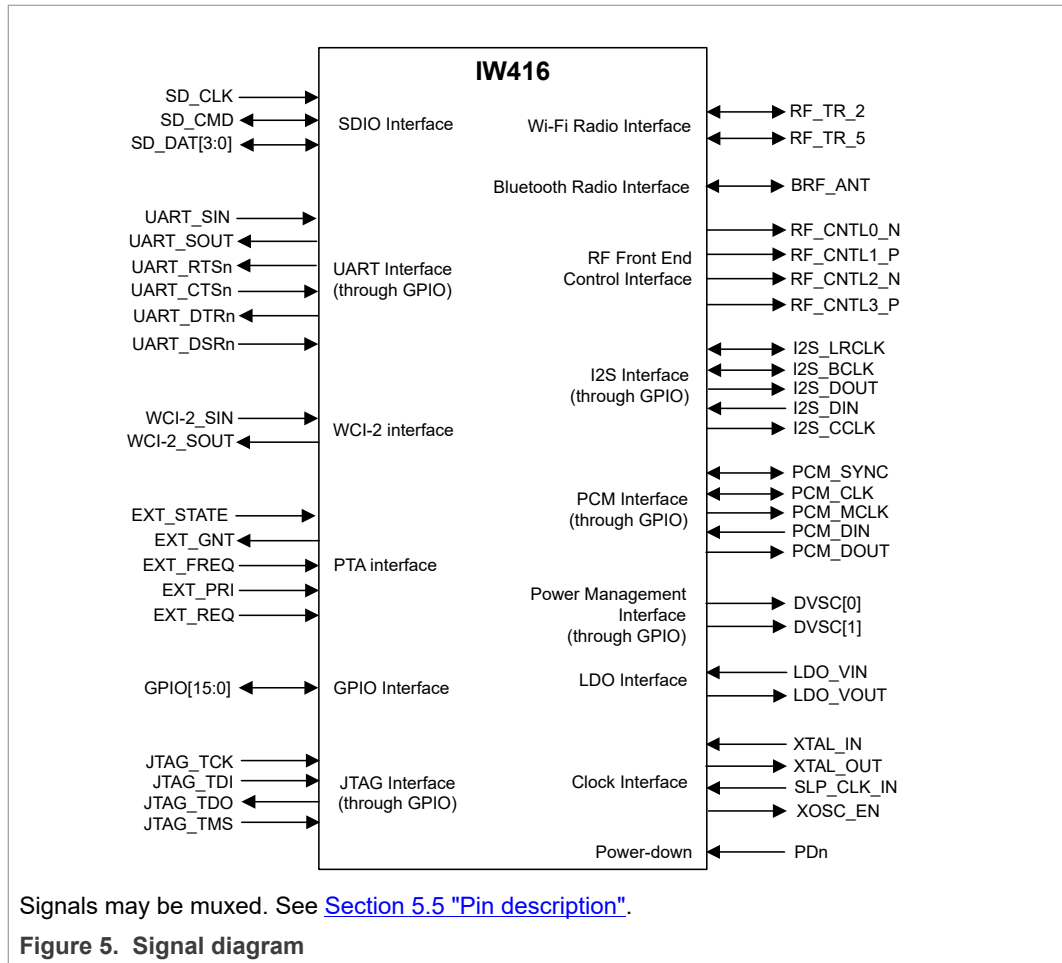

The advanced coexistence framework provides packet traffic arbitration (PTA) for the following use cases:

- Coexistence between internal Wi-Fi and internal Bluetooth radios
- Coexistence between internal Wi-Fi and Bluetooth radios and an external radio such as 802.15.4, LTE or 5G. The external radio can be connected to the PTA interface or WCI-2 interface. WCI-2 message format and message type comply with Bluetooth special interest group (SIG) core specification volume 7 part C.

## 5 Pin information

### 5.1 Signal diagram

Figure 5 shows the signals for the device. Some signals are muxed through GPIO.

5.2 Pin assignment - HVQFN68 package

Note that some pins have muxed signals. See [Section 5.5 "Pin description"](#).

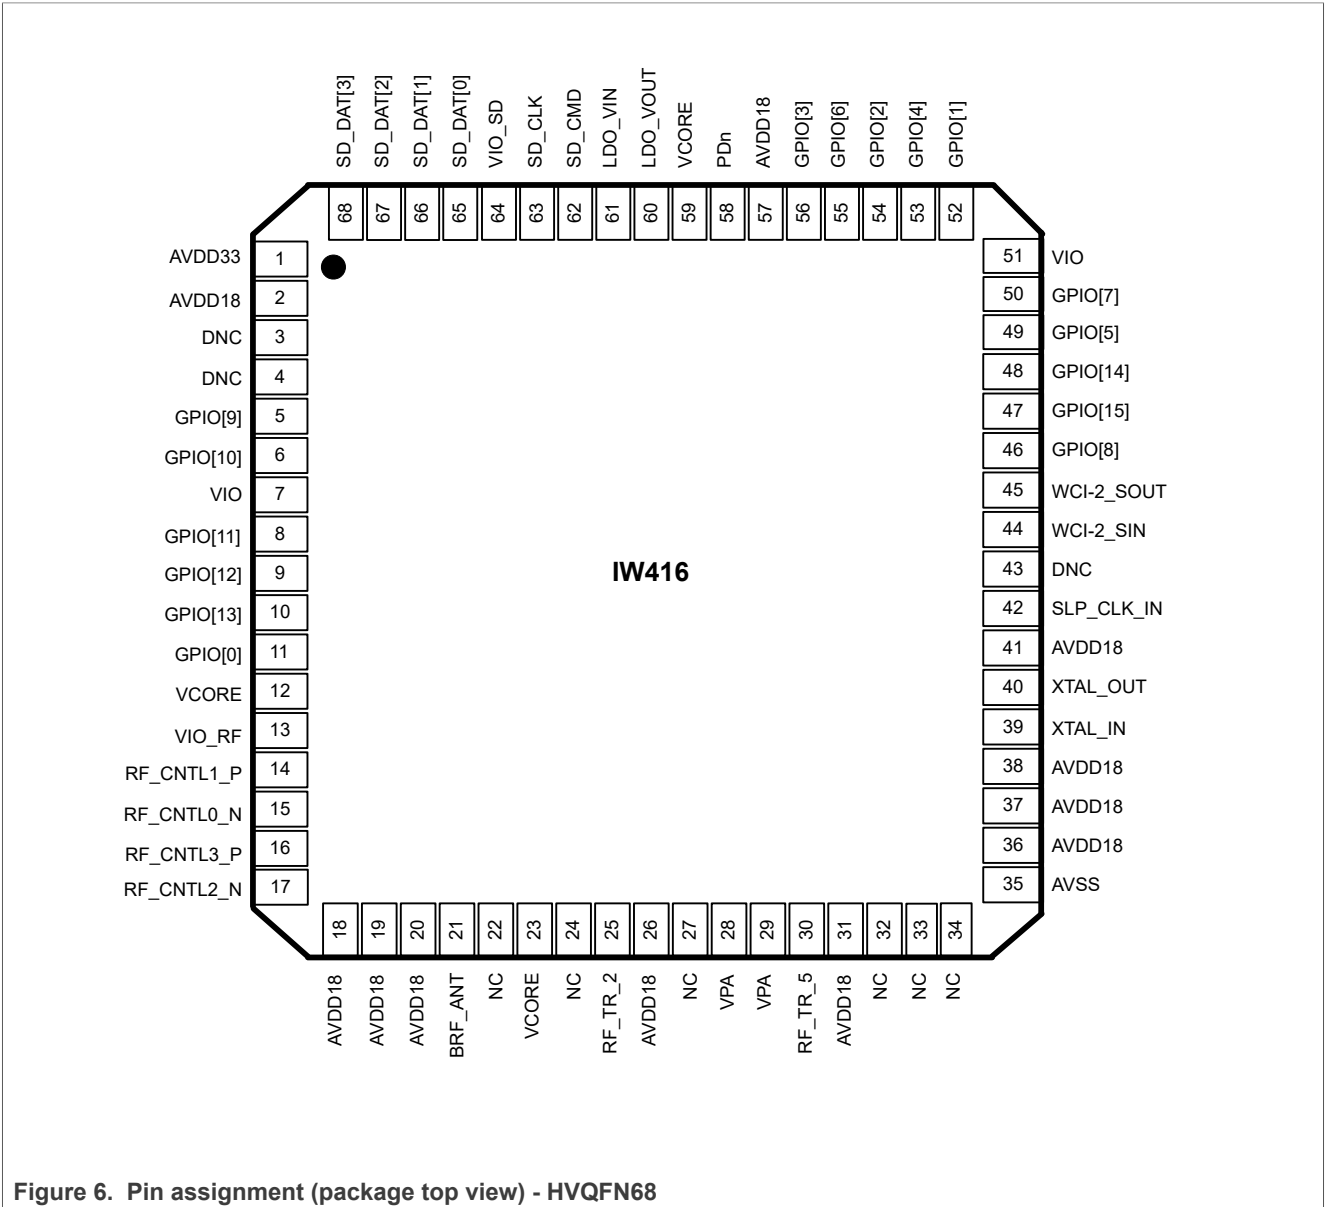

Figure 6. Pin assignment (package top view) - HVQFN68

**Note:** See [Section 9.10 "Reference clock specifications"](#) for electrical specifications. See [Section 10.3 "Package marking"](#) for more information on package marking and pin 1 location.

### 5.2.1 Pin list by number - HVQFN68 package

The following table shows the pin list sorted by pin number.

Table 4. Pin list by number - HVQFN68 package

Pin number	Pin name	Power	Type

## 5.4 Pin types

Table 7. Pin types

Pin type	Description
I/O	Digital input/output
I	Digital input
O	Digital output
A, I	Analog input
A,O	Analog output
A, I/O	Analog input/output
NC	No connect
DNC	Do not connect
Power	Power
Ground	Ground

## 5.5 Pin description

### 5.5.1 Pin states

The pin states information provided in the tables includes:

- **No Pad Power State** indicates the state when there is no power
- **PwrDwn State** denotes the power-down state in default configuration. Many pads have programmable power-down values, which can be set by firmware.
- **Reset State** is the state after the power-on-reset state and before the hardware state (HW State)
- **HW State** (hardware state) is the state after boot code finishes and before firmware download begins (firmware may change the pin state). HW State may differ based on the pin muxing/strap setting. For example, for UART\_RTSn and UART\_SOUT, the boot code will enable the UART interface when the device is in SDIO-UART mode, making the HW states output high and output low, respectively.
- **PwrDwn Prog** indicates if the power-down state can be programmed
- **Internal PU/PD** columns indicates the following:
  - Type of PU/PD (weak vs nominal)
  - The polarity (PU vs. PD)

The internal pull-up or pull-down applies when the pin is in input mode
- **PU** denotes whether the pull-up can be programmed or not
- **PD** denotes whether the pull-down can be programmed or not
- Pull-up and pull-down are only effective when the pad is in input mode
- After firmware is downloaded, the pads (GPIO, RF control, and so on) are programmed in functional mode per the functionality of the pins

5.5.2 General purpose I/O (GPIO) (MFP)

Table 8. GPIO<sup>[1]</sup> (MFP)

Pins may be Multi-Functional Pins (MFP).

Pin Name	Supply	No Pad Power State	Reset State	HW State	PwrDwn State	PwrDwn Prog	Internal PU/PD	PU	PD
GPIO[15]	VIO	tristate	input	input	drive high	yes	nominal PU	yes	yes

### 5.5.6 UART host interface

**Table 12. UART host interface (MFP)**

*Pins may be Multi-Functional Pins (MFP).*

Pin Name	Type	Supply	Description
UART_SIN	I	VIO	UART serial input signal - muxed with GPIO[9]
UART_SOUT	O	VIO	UART serial output signal - muxed with GPIO[10]
UART_RTSn	O	VIO	UART request-to-send output signal (active low) - muxed with GPIO[11]
UART_CTSn	I	VIO	UART clear-to-send input signal (active low) - muxed with GPIO[8]
UART_DTRn	O	VIO	UART data-terminal-ready output signal (active low) - muxed with GPIO[13]
UART_DSRRn	I	VIO	UART data-set-ready input signal (active low) - muxed with GPIO[12]

### 5.5.7 Audio interface

**Table 13. Audio interface pins (MFP)**

*Pins may be Multi-Functional Pins (MFP). See pin descriptions for functional modes.*

Pin Name	Type	Supply	Description
PCM_DIN	I	VIO	PCM receive input signal - muxed with GPIO[4]/GPIO[5]
PCM_DOUT	O	VIO	PCM transmit output signal - muxed with GPIO[4]/GPIO[5]
PCM_SYNC	I/O	VIO	PCM frame sync - muxed with GPIO[7] <ul style="list-style-type: none"> <li>• Output if master</li> <li>• Input if slave</li> </ul>
PCM_CLK	I/O	VIO	PCM data clock - muxed with GPIO[6] <ul style="list-style-type: none"> <li>• Output if master</li> <li>• Input if slave</li> </ul>
PCM_MCLK	O	VIO	PCM clock signal (output, optional) - muxed with GPIO[3] Optional clock used for some codecs.
I2S_DIN	I	VIO	I2S receive input signal - muxed with GPIO[4]/GPIO[5] , depending on the configuration.
I2S_DOUT	O	VIO	I2S transmit output data signal - muxed with GPIO[4]/GPIO[5] , depending on the configuration.
I2S_LRCLK	I/O	VIO	I2S left-right clock - muxed with GPIO[7] <ul style="list-style-type: none"> <li>• Output if master</li> <li>• Input if slave</li> </ul>
I2S_BCLK	I/O	VIO	I2S bit clock - muxed with GPIO[6] <ul style="list-style-type: none"> <li>• Output if master</li> <li>• Input if slave</li> </ul>
I2S_CCLK	O	VIO	I2S clock (output/optional) - muxed with GPIO[3] . Optional clock used for some codecs.

### 5.5.8 PTA interface

**Table 14. PTA interface (MFP)**

*Pins may be Multi-Functional Pins (MFP). See pin descriptions for functional modes.*

Pin Name	Type	Supply	Description
EXT_STATE	I	VIO	External radio state input signal - muxed with GPIO[1] External radio traffic direction (Tx/Rx): <ul style="list-style-type: none"> <li>• 1: Tx</li> <li>• 0: rx</li> </ul>
EXT_GNT	O	VIO	External radio grant output signal - muxed with GPIO[5]
EXT_FREQ	I	VIO	External radio frequency input signal - muxed with GPIO[4] Frequency overlap between external radio and Wi-Fi: <ul style="list-style-type: none"> <li>• 1: overlap</li> <li>• 0: non-overlap</li> </ul> This signal is useful when the external radio is a frequency hopping device.
EXT_PRI	I	VIO	External radio input priority signal - muxed with GPIO[6] Priority of the request from the external radio. Can support 1 bit priority (sample once) and 2 bit priority (sample twice). Can also have Tx/Rx info following the priority info if EXT_STATE is not used.
EXT_REQ	I	VIO	Request from the external radio - muxed with GPIO[7]

### 5.5.9 WCI-2 interface

**Table 15. WCI-2 interface**

Pin Name	Supply	No Pad Power State	Reset State	HW State	PwrDwn State	PwrDwn Prog	Internal PU/PD	PU	PD
WCI-2_SIN	AVDD18	tristate	input	input	tristate	no	weak PU	yes	yes
WCI-2_SIN (input)									
WCI-2_SOUT	AVDD18	tristate	output	output	tristate	no	weak PU	yes	yes
WCI-2_SOUT (output)									

5.5.10 Clock interface

Table 16. Clock interface

Pin Name	Supply	No Pad Power State	Reset State	HW State	PwrDwn State	PwrDwn Prog	Internal PU/ PD	PU	PD
XTAL_IN	AVDD18	--	--	--	--	--	--	--	--
Reference clock input Reference clock signal frequency must be 26 MHz or 40 MHz from an external crystal or external crystal oscillator. Power consumption in sleep mode is lower with an external crystal compared to an external crystal oscillator when an external sleep clock is not used. See <a href="#">Section 9.10 "Reference clock specifications"</a> .									
XTAL_OUT	AVDD18	--	--	--	--	--	--	--	--
Connect this pin to an external crystal when an external crystal is used. When an external crystal oscillator is used, connect this pin to ground with resistance less than 100 Ω.									
SLP_CLK_IN	AVDD18	tristate	input	input	tristate	no	nominal PU	yes	yes
Sleep clock input (optional) Used for lower power operation in sleep mode. <ul style="list-style-type: none"> <li>• An external sleep clock of 32.768 kHz can be used to reduce the current consumption in sleep mode.</li> <li>• If no external sleep clock is used, leave this pin floating (DNC).</li> </ul>									
XOSC_EN	VIO	--	--	--	--	--	--	--	--
Oscillator enable (output) (active high) XOSC_EN signal can be used ONLY when an external sleep clock is used. Used to enable an external oscillator. 0 = disable external oscillator 1 = enable external oscillator <b>Note:</b> Muxed with GPIO[0].									

5.5.11 Power down (PDn) pin

Table 17. Power down (PDn) pin

Pin Name	Supply	No Pad Power State	Reset State	HW State	PwrDwn State	PwrDwn Prog	Internal PU/ PD	PU	PD
PDn	AVDD18	--	--	--	--	--	--	--	--
Full power-down (input) (active low) 0 = full power-down mode 1 = normal mode <ul style="list-style-type: none"> <li>• PDn can accept an input of 1.8V to 4.5V</li> <li>• PDn may be driven by the host</li> <li>• PDn must be high for normal operation</li> </ul> No internal pull-up on this pin.									

### 5.5.12 Power supply and ground

Table 18. Power and ground pins

Pin Name	Type	Description
VCORE	Power	1.05V core power supply
VIO	Power	1.8V/3.3V digital I/O power supply
VIO_SD	Power	1.8V/3.3V digital I/O SDIO power supply <b>Note:</b> 1. For SDIO 2.0, VIO_SD must be 3.3 V 2. For SDIO 3.0, VIO_SD must be 1.8 V
VIO_RF	Power	1.8V/3.3V analog I/O RF power supply
AVDD33	Power	3.3V analog power supply <b>Note:</b> For new designs, leave this pin unconnected.
AVDD18	Power	1.8V analog power supply
VPA	Power	2.2V analog power supply
LDO_VIN	Power	LDO voltage input (1.8V)
LDO_VOUT	Power	LDO voltage output
AVSS	Ground	Ground
NC	NC	No Connect
DNC	DNC	Do Not Connect Do not connect these pins. Leave these pins floating.

### 5.5.13 JTAG interface

Table 19. JTAG interface pins (MFP)

Pins may be Multi-Functional Pins (MFP).

Pin Name	Type	Supply	Description
JTAG_TDO	O	VIO	JTAG test data output signal - muxed with GPIO[3]
JTAG_TDI	I	VIO	JTAG test data input signal - muxed with GPIO[2]
JTAG_TMS	I	VIO	JTAG test mode select input signal - muxed with GPIO[15]
JTAG_TCK	I	VIO	JTAG test clock input signal - muxed with GPIO[14]

### 5.6 Configuration pins

The table below shows the pins used as configuration inputs to set parameters following a reset. The definition of these pins changes immediately after reset to their usual function.

To set a configuration bit to 0, attach a 50 kΩ–100 kΩ resistor from the pin to ground. No external circuitry is required to set a configuration bit to 1.

Table 20. Configuration pins

Configuration bits	Pin name	Configuration function
CON[9]	GPIO[1]	Reserved
CON[8]	GPIO[11]	Set to 111.
CON[7]	GPIO[8]	
CON[6]	RF_CNTL1_P	Reserved Set to 1.
CON[5]	RF_CNTL3_P	Reference clock frequency select 1 = 26 MHz (default) 0 = 40 MHz
CON[1]	RF_CNTL2_N	Host configuration options (see <a href="#">Table 21</a> ).
CON[0]	RF_CNTL0_N	No hardware impact. Software reads and boots accordingly. See the table below. <b>Note:</b> <i>The boot code needs to use the strap value to set the correct boot sequence.</i>

[Table 21](#) shows the host configuration options.

Table 21. Host configuration options

RF_CNTL2_N/ CON[1]	RF_CNTL0_N/ CON[0]	Wi-Fi	Bluetooth/ Bluetooth LE	Number of SDIO functions
1	0	SDIO	UART	1 (Wi-Fi)
Others	Others	Reserved	Reserved	—

## 6 Power information

The table in [Section 5.5.12 "Power supply and ground"](#) shows the required voltage levels for each rail and PDn input signal.

### 6.1 Power modes

The IW416 power modes reflect the combination of the respective state of Wi-Fi and Bluetooth subsystems.

[Table 22](#) shows the device power modes, Wi-Fi and Bluetooth states, and associated Wi-Fi and Bluetooth CPU status.

Refer to [Section 9.6 "Current consumption"](#) for the power consumption values of Wi-Fi and Bluetooth subsystems.

**Table 22. Device power modes**

Device mode	Wi-Fi state	Bluetooth state	Wi-Fi CPU status	Bluetooth CPU status
Wi-Fi and Bluetooth active	Active	Active	Active	Active
Standby	Standby	Standby	Active	Active
Wi-Fi active	Active	Sleep	Active	WFI <sup>[1]</sup>
Bluetooth active	Sleep	Active	WFI	Active
Sleep	Sleep	Sleep	WFI	WFI
Deep-sleep <sup>[2]</sup>	Deep-sleep	Deep-sleep	--	--

[1] Wait for Interrupt: the ARM-based CPU is in low-power standby state.

[2] Memory placed in low-power retention mode.

## 6.2 Power-up sequence

The IW416 VCORE is supplied through an external PMIC. The PDn pin of the IW416 is tied to 1.8V. The ramp-up is controlled by the Host using PMIC\_EN, the input enable pin of the power regulator.

The power configuration is detailed in [Section 6.2.1 "Configuration—VCORE from PMIC"](#) and [Section 6.2.2 "Power-up sequence timing"](#) shows the power-up timing.

### 6.2.1 Configuration—VCORE from PMIC

- VCORE from PMIC
- PMIC\_EN ramps up from Host 3.3V or Host GPIO pin
- PDn supplied from AVDD18 (follow AVDD18; PDn is connected 1.8V supply)
- External VPA/AVDD18 from PMIC
- External VIO/VIO\_RF from Host (1.8V/3.3V)

Table 23. Configuration—VCORE from PMIC [1]

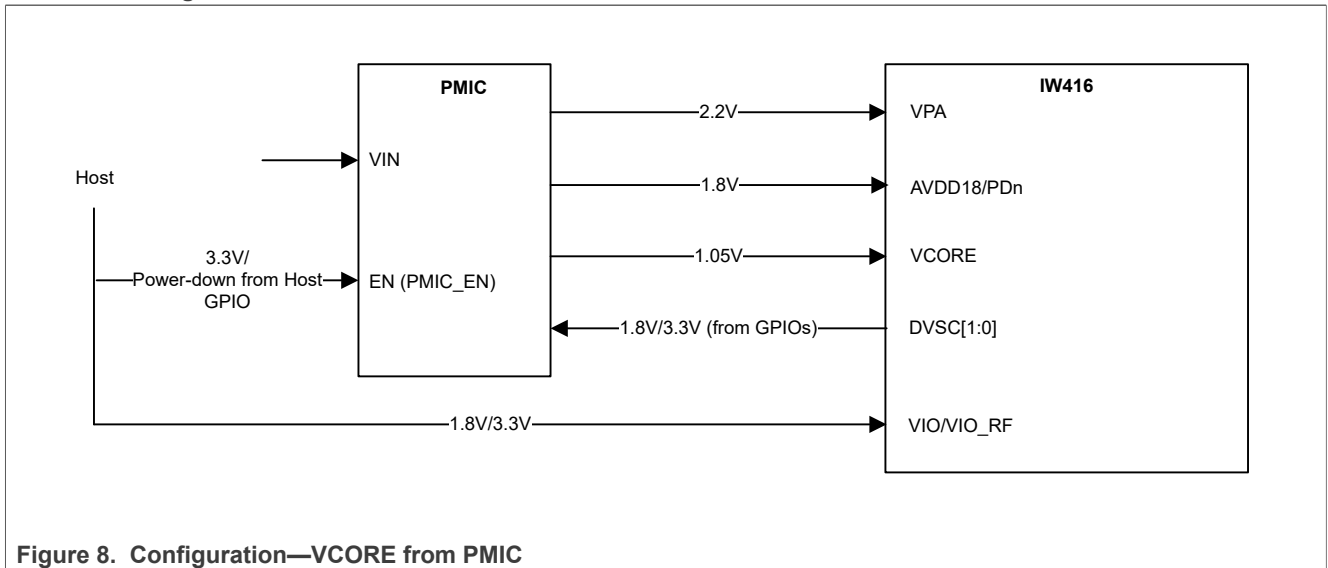

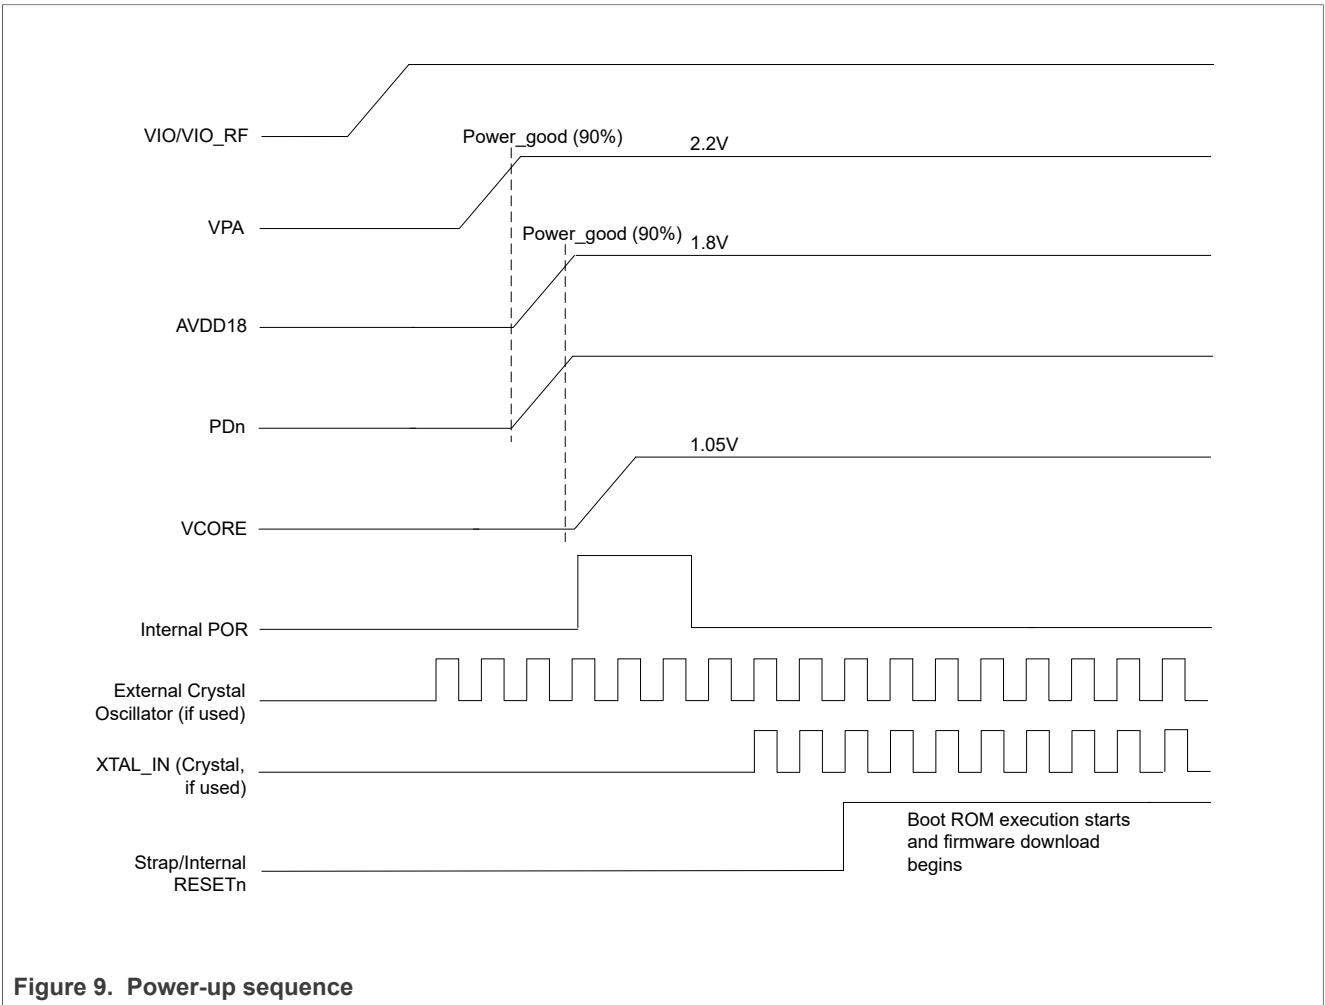

Figure 8. Configuration—VCORE from PMIC

[1] A minimum time of 100 ms is required after PMIC\_EN is deasserted (=0) and before it is asserted (=1).

6.2.2 Power-up sequence timing

- VPA must be good (90%) before AVDD18 starts ramping up.
- AVDD18 must be good (90%) before VCORE starts ramping up.

Figure 9 shows the power-up sequence.

## 6.3 Power-down sequence

### 6.3.1 Power-down sequence

During the power-down sequence, VPA ramps down before AVDD18 in order for the RF PA to turn the logic off (depends on the control logic generated from AVDD18). Also, when the PMIC VBAT is removed, the PMIC cannot guarantee a ramp-down requirement.

[Figure 10](#) shows the recommended power-down sequence.

6.3.2 Host power-down pin (PMIC\_EN) usage

The maximum ramp-down time for V<sub>CORE</sub> from PMIC\_EN assertion is 10 ms. PMIC\_EN must be asserted a minimum of 100 ms to guarantee that V<sub>CORE</sub> and AVDD18 are discharged to less than 0.2V for the POR to generate properly after PMIC\_EN is deasserted.

Figure 11 shows the sequence.

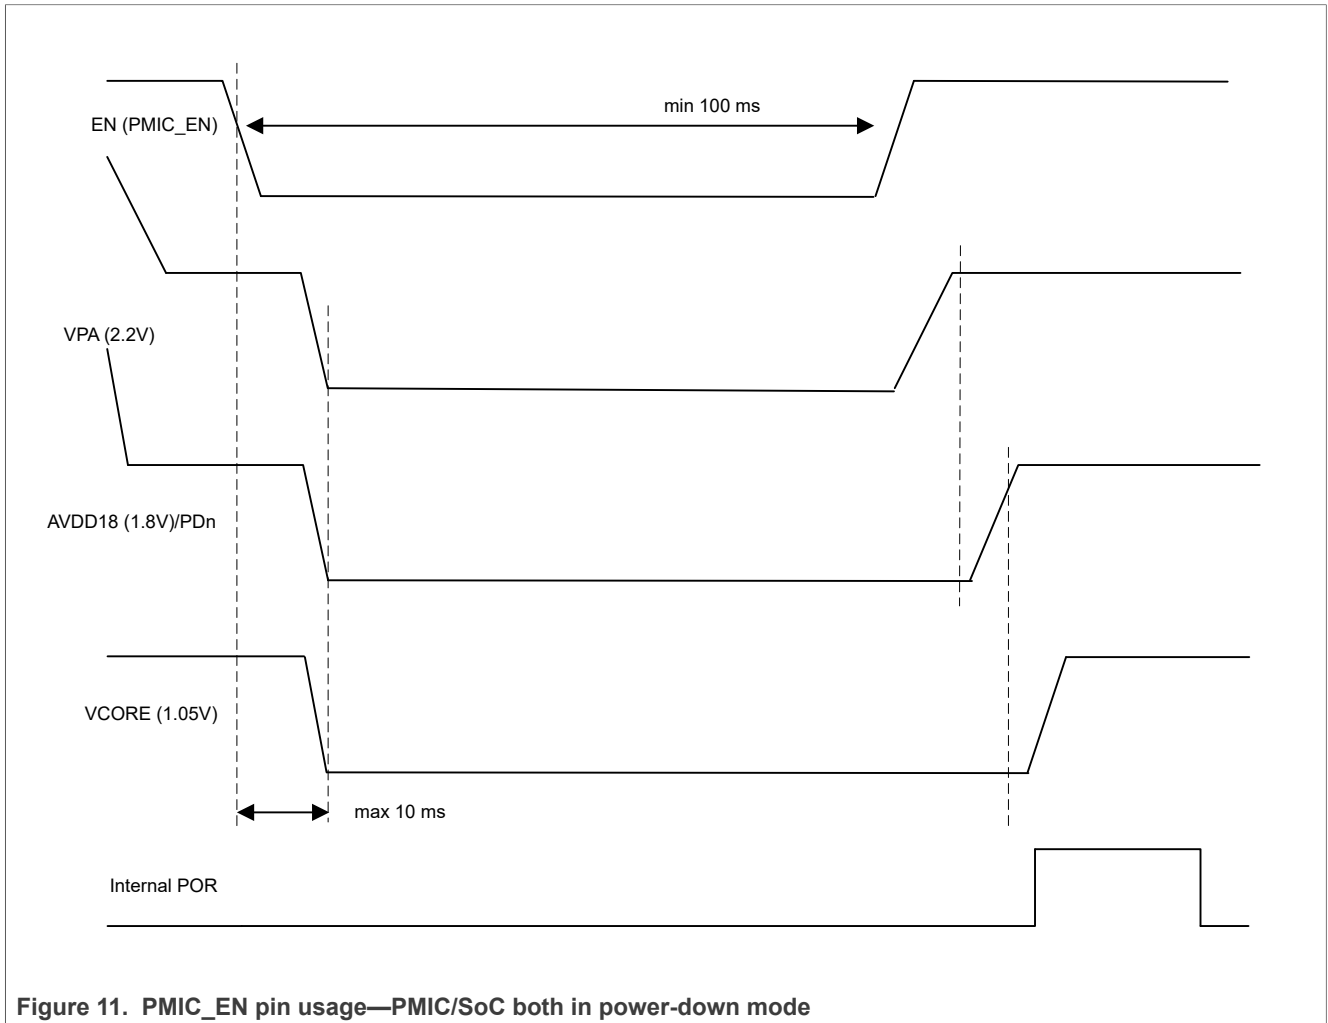

Figure 11. PMIC\_EN pin usage—PMIC/SoC both in power-down mode

## 6.4 Leakage optimization

For applications not using Wi-Fi and Bluetooth, the device can be put into a low-leakage mode of operation. Two methods are available to set the device to low-leakage mode:

- Using PDn pin  
The power-down state provides the lowest leakage mode of operation. Assert PDn low to enter power-down. If firmware is not downloaded, the device must be kept in power-down mode to reduce the leakage.
- Powering off all the rails  
Alternatively, all the power rails can be powered off. In this case, the state of the PDn pin is irrelevant.

## 6.5 Deep sleep

When a programmable power regulator is used to supply V<sub>CORE</sub>, the IW416 may use the power management interface to reduce V<sub>CORE</sub> to approximately 0.8V to reduce power consumption in deep sleep mode.

## 6.6 Reset

The IW416 is reset to its default operating state under any of the following conditions:

- Internal Power-On Reset (POR): POR is triggered when the device receives power and V<sub>CORE</sub> and AVDD18 supplies are good. See [Section 6.2 "Power-up sequence"](#).
- Software/firmware reset: software/firmware issues a reset.
- External PDn pin assertion: the device is reset when the PDn input pin is <0.2V and transitions from low to high.

See [Section 9.11 "Power down \(PDn\) pin specifications"](#) for the electrical specifications.

## 7 Absolute maximum ratings

**CAUTION:** The absolute maximum ratings table defines the limitations for electrical and thermal stresses. These limits prevent permanent damage to the device. Exposure to conditions at or beyond these ratings is not guaranteed and can damage the device.

**Table 24. Absolute maximum ratings**

Symbol	Parameter	Min	Max	Unit
V <sub>CORE</sub>	Core power supply	-	1.15	V
V <sub>IO</sub>	1.8 V/3.3 V digital I/O power supply	-	2.2	V
		-	4.0	V
V <sub>IO_SD</sub>	1.8 V/3.3 V digital I/O power supply	-	2.2	V
		-	4.0	V
V <sub>IO_RF</sub>	1.8 V/3.3 V digital I/O power supply	-	2.2	V
		-	4.0	V
AVDD18	1.8 V analog power supply	-	1.98	V
VPA	2.2 V analog power supply	-	2.3	V
AVDD33	3.3 V analog power supply	-	3.96	V
LDO_VIN	LDO input voltage supply	-	2.0	V
T <sub>STORAGE</sub>	Storage temperature	-55	+125	°C

**Table 25. Limiting values (HVQFN68 package)**

T <sub>A</sub>	Ambient operating temperature	Industrial	-40	-	85	°C
T <sub>J</sub>	Junction temperature	--	--	--	125	°C

## 9 Electrical specifications

### 9.1 GPIO/LED interface specifications

The GPIO pins are powered by VIO voltage supply.

#### 9.1.1 VIO DC characteristics

##### 9.1.1.1 1.8V operation

**Table 27. DC electrical characteristics—1.8V operation (VIO)**

Unless otherwise specified, the values apply per [Section 8 "Recommended operating conditions"](#).

Symbol	Parameter	Condition	Min	Typ	Max	Unit
V <sub>IH</sub>	Input high voltage	--	0.7*VIO	--	VIO+0.4	V
V <sub>IL</sub>	Input low voltage	--	-0.4	--	0.3*VIO	V
V <sub>HYS</sub>	Input hysteresis	--	100	--	--	mV
V <sub>OH</sub>	Output high voltage	--	VIO-0.4	--	--	V
V <sub>OL</sub>	Output low voltage	--	--	--	0.4	V

##### 9.1.1.2 3.3V operation

**Table 28. DC electrical characteristics—3.3V operation (VIO)**

Unless otherwise specified, the values apply per [Section 8 "Recommended operating conditions"](#).

Symbol	Parameter	Condition	Min	Typ	Max	Unit
V <sub>IH</sub>	Input high voltage	--	0.7*VIO	--	VIO+0.4	V
V <sub>IL</sub>	Input low voltage	--	-0.4	--	0.3*VIO	V
V <sub>HYS</sub>	Input hysteresis	--	100	--	--	mV
V <sub>OH</sub>	Output high voltage	--	VIO-0.4	--	--	V
V <sub>OL</sub>	Output low voltage	--	--	--	0.4	V

## 9.2 RF front-end control interface specifications

### 9.2.1 VIO\_RF DC characteristics

#### 9.2.1.1 1.8V operation

**Table 29. DC electrical characteristics—1.8V operation (VIO\_RF)**

Unless otherwise specified, the values apply per [Section 8 "Recommended operating conditions"](#)

Symbol	Parameter	Condition	Min	Typ	Max	Unit
V <sub>IH</sub>	Input high voltage	--	0.7*VIO_RF	--	VIO_RF+0.4	V
V <sub>IL</sub>	Input low voltage	--	-0.4	--	0.3*VIO_RF	V
V <sub>HYS</sub>	Input hysteresis	--	100	--	--	mV
V <sub>OH</sub>	Output high voltage	--	VIO_RF-0.4	--	--	V
V <sub>OL</sub>	Output low voltage	--	--	--	0.4	V

#### 9.2.1.2 3.3V operation

**Table 30. DC electrical characteristics—3.3V operation (VIO\_RF)**

Unless otherwise specified, the values apply per [Section 8 "Recommended operating conditions"](#)

Symbol	Parameter	Condition	Min	Typ	Max	Unit
V <sub>IH</sub>	Input high voltage	--	0.7*VIO_RF	--	VIO_RF+0.4	V
V <sub>IL</sub>	Input low voltage	--	-0.4	--	0.3*VIO_RF	V
V <sub>HYS</sub>	Input hysteresis	--	100	--	--	mV
V <sub>OH</sub>	Output high voltage	--	VIO_RF-0.4	--	--	V
V <sub>OL</sub>	Output low voltage	--	--	--	0.4	V

### 9.3 Wi-Fi radio specifications

The Wi-Fi radio interface pins are powered by AVDD18.

#### 9.3.1 Wi-Fi radio performance measurement

The Wi-Fi transmit/receive performance is measured either at the antenna port or at the chip port.

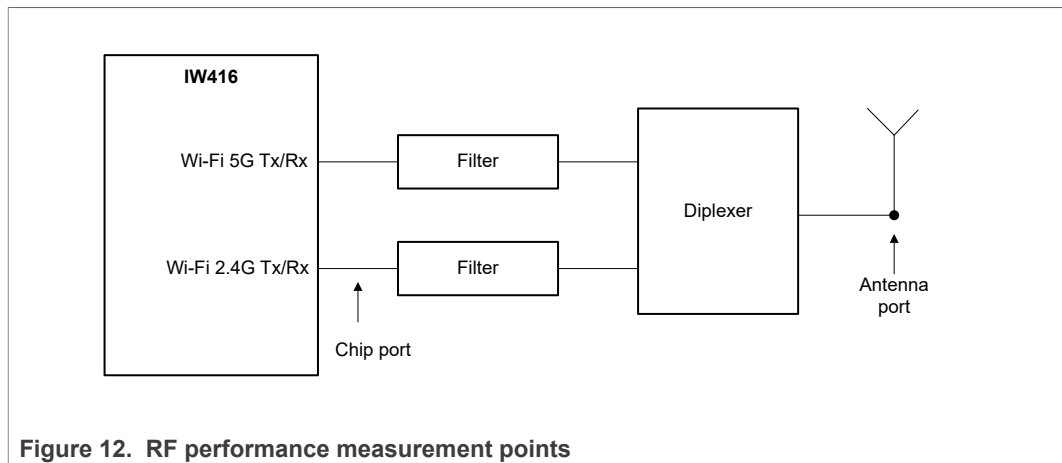

Figure 12. RF performance measurement points

## 9.3.2 2.4 GHz Wi-Fi receive performance

**Note:** Unless otherwise stated, all specifications are at 25°C, nominal voltage, and at the chip port.

Table 31. 2.4 GHz Wi-Fi receive performance

Parameter	Conditions	Min	Typ	Max	Unit
RF frequency range	2.4 GHz—IEEE 802.11n/g/b	2400	--	2490	MHz
Maximum Rx input level	Maximum Rx input level without device damage	--	--	2	dBm
Receiver sensitivity 802.11b	1 Mbit/s	--	-99	--	dBm
	2 Mbit/s	--	-95	--	dBm
	5.5 Mbit/s	--	-94	--	dBm
	11 Mbit/s	--	-91	--	dBm

	LE coded 500 kbit/s (S = 2)- Image frequency interference, C/I image channel	--	-32	--	dB

Table 36. Bluetooth/Bluetooth LE receive performance...continued

Parameter	Conditions	Min	Typ	Max	Unit
C/I performance (RCV/CA/09/C) (continued)	LE coded 500 kbit/s (S = 2)- Adjacent (1 MHz) interference to in-band mirror frequency, C/I image $\pm$ 1 MHz	--	-41	--	dB
	LE coded 125 kbit/s (S = 8)- Co-channel interference, C/I co channel	--	7	--	dB
	LE coded 125 kbit/s (S = 8)- Adjacent (1 MHz) interference, C/I 1 MHz	--	-9	--	dB
	LE coded 125 kbit/s (S = 8)- Adjacent (2 MHz) interference, C/I 2 MHz	--	-51	--	dB
	LE coded 125 kbit/s (S = 8)- Adjacent (3 MHz) interference, C/I $\geq$ 3 MHz	--	-61	--	dB
	LE coded 125 kbit/s (S = 8)- Image frequency Interference, C/I image channel	--	-33	--	dB
	LE coded 125 kbit/s (S = 8)- Adjacent (1 MHz) interference to in-band mirror frequency, C/I image $\pm$ 1 MHz	--	-42	--	dB

[1] De-rated at 2418 MHz, 2444 MHz and 2470 MHz. Compliant with BT SIG requirements.  
 [2] Primary/reference channels: 2405 MHz, 2441 MHz, and 2477 MHz. Average value across the three channels.

### 9.4.2 Bluetooth/Bluetooth LE transmit performance

**Note:** Unless otherwise stated, all specifications are at 25°C, nominal voltage, and at BRF\_ANT pin.

Table 37. Bluetooth/Bluetooth LE transmit performance

Parameter	Conditions	Min	Typ	Max	Unit
RF frequency range	--	2.4	--	2.5	GHz
Output power	Class 1 without external PA—BDR	--	+13	--	dBm
	Class 1 without external PA—EDR	--	+10	--	dBm
Gain range	Class 1 without external PA	--	30	--	dB
Gain resolution	--	--	0.5	--	dB
Spurious emission (BDR) (in-band)	±500 kHz	--	-20	--	dBc
	±2 MHz	--	-33	--	dBm
	±3 MHz	--	-45	--	dBm
Spurious emission (EDR) (in-band)	±1 MHz	--	-26	--	dBc
	±2 MHz	--	-29	--	dBm
	±3 MHz	--	-40	--	dBm
Spurious emission (out-of-band)	30–88 MHz	--	-65	-41.25	dBm
	88–960 MHz	--	-65	-41.25	
	0.96–20 GHz All frequencies in this range < -41.25 dBm, except at 2x Bluetooth channel frequency. Measured at pin without external filter.	--	-23	-18	
	Restricted—2.38–2.39 GHz	--	-55	-41.25	
	Restricted—2.4835–2.6 GHz	--	-50	-41.25	
Out-of-band/ Cellular band noise	GSM850 (869–894 MHz)	--	-140	--	dBm/Hz
	GSM900 (925–960 MHz)	--	-140	--	
	GSM DCS (1805–1880 MHz)	--	-135	--	
	GSM PCS (1930–1990 MHz)	--	-135	--	
	GPS (1575.42 ±1.023 MHz)	--	-140	--	
	WCDMA Band I (2110–2170 MHz)	--	-130	--	
	WCDMA Band V (869–894 MHz)	--	-140	--

[1] Specifies the minimum and maximum transmit power step size. As per Bluetooth SIG specification, min step size = 2 dB and max step size = 8 dB

[2] As per Bluetooth SIG specification, the lower limit is -20 kHz and the upper limit is +20 kHz.

[3] Calculated over 50 us - Bluetooth SIG specification.

[4] As per Bluetooth SIG specification, the lower limit is -40 kHz and the upper limit is +40 kHz.

## 9.5 PTA interface specifications

The IW416 PTA interface pins are powered by VIO voltage supply.

See [Section 9.1.1 "VIO DC characteristics"](#) for specifications.

9.6 Current consumption

**Note:** Unless otherwise stated, all specifications are at 25°C, nominal voltage, and typical value.

Table 38. Current consumption values

Mode	Conditions	VPA	AVDD18	VCORE	VIO (3.3 V)	Unit
<b>Sleep mode</b>

## 9.7 SDIO host interface specifications

The SDIO host interface pins are powered by VIO\_SD voltage supply.

See [Section 9.7.1 "VIO\\_SD DC characteristics"](#) for specifications.

The SDIO electrical specifications are identical for 4-bit SDIO and 1-bit SDIO transfer modes.

### 9.7.1 VIO\_SD DC characteristics

Table 39. VIO\_SD requirements

SDIO version	Specifications	Maximum frequency	VIO_SD value
SDIO 2.0	Default speed	25 MHz	3.3 V
	High speed	50 MHz	3.3 V
SDIO 3.0	SDR12	25 MHz	1.8 V
	SDR25	50 MHz	1.8 V
	SDR50	100 MHz	1.8 V
	SDR50	50 MHz	1.8 V

#### 9.7.1.1 1.8V operation

Table 40. DC electrical characteristics—1.8V operation (VIO\_SD)

Unless otherwise specified, the values apply per [Section 8 "Recommended operating conditions"](#)

Symbol	Parameter	Condition	Min	Typ	Max	Unit
V <sub>IH</sub>	Input high voltage	--	0.7*VIO_SD	--	VIO_SD+0.4	V
V <sub>IL</sub>	Input low voltage	--	-0.4	--	0.3*VIO_SD	V
V <sub>HYS</sub>	Input hysteresis	--	100	--	--	mV
V <sub>OH</sub>	Output high voltage	--	VIO_SD-0.4	--	--	V
V <sub>OL</sub>	Output low voltage	--	--	--	0.4	V

#### 9.7.1.2 3.3V operation

Table 41. DC electrical characteristics—3.3V operation (VIO\_SD)

Unless otherwise specified, the values apply per [Section 8 "Recommended operating conditions"](#)

Symbol	Parameter	Condition	Min	Typ	Max	Unit
V <sub>IH</sub>	Input high voltage	--	0.7*VIO_SD	--	VIO_SD+0.4	V
V <sub>IL</sub>	Input low voltage	--	-0.4	--	0.3*VIO_SD	V
V <sub>HYS</sub>	Input hysteresis	--	100	--	--	mV
V <sub>OH</sub>	Output high voltage	--	VIO_SD-0.4	--	--	V
V <sub>OL</sub>	Output low voltage	--	--	--	0.4	V

9.7.2 Default speed, high-speed modes

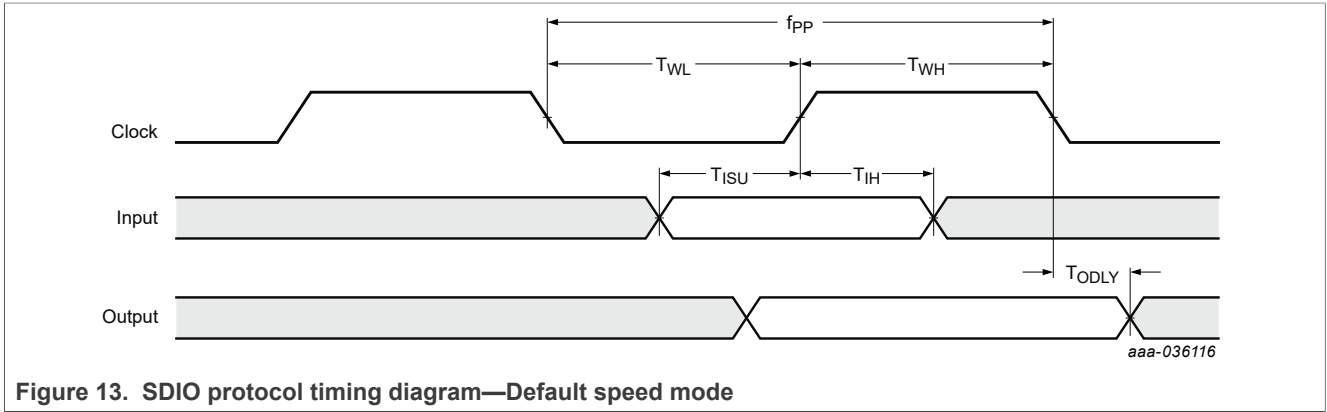

Figure 13. SDIO protocol timing diagram—Default speed mode

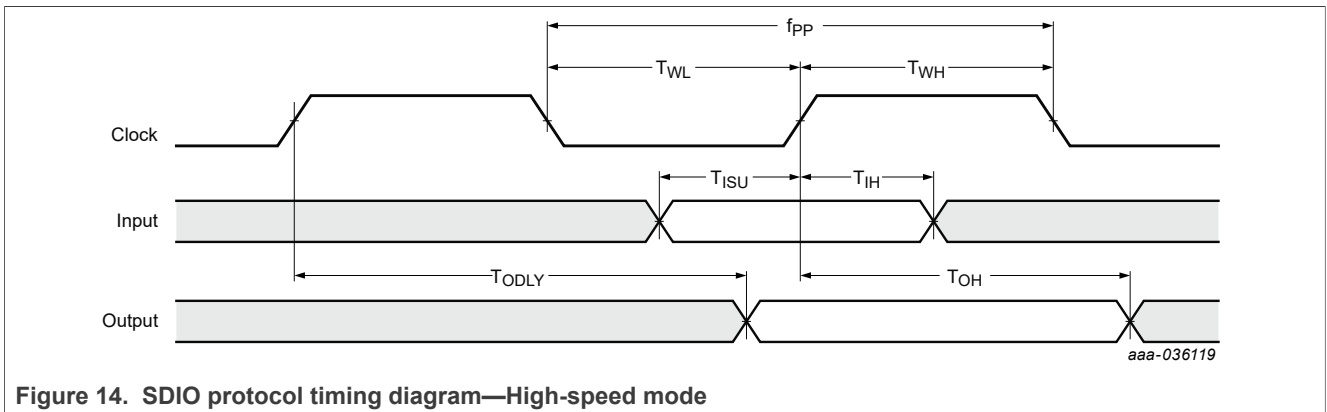

Figure 14. SDIO protocol timing diagram—High-speed mode

Table 42. SDIO timing data—Default speed, high-speed modes

Unless otherwise specified, the values apply per Section 8 "Recommended operating conditions"

Symbol	Parameter	Condition	Min	Typ	Max	Unit
f <sub>PP</sub>	Clock frequency	Normal	0	--	25	MHz
		High-speed	0	--	50	MHz
T <sub>WL</sub>	Clock low time	Normal	10	--	--	ns
		High-speed	7	--	--	ns
T <sub>WH</sub>	Clock high time	Normal	10	--	--	ns
		High-speed	7	--	--	ns
T <sub>ISU</sub>	Input setup time	Normal	5	--	--	ns
		High-speed	6	--	--	ns
T <sub>IH</sub>	Input hold time	Normal	5	--	--	ns
		High-speed	2	--	--	ns
T <sub>ODLY</sub>	Output delay time	Normal	--	--	14	ns
	CL ≤ 40 pF (1 card)	High-speed	--	--	14	ns

Table 42. SDIO timing data—Default speed, high-speed modes...continued

Unless otherwise specified, the values apply per Section 8 "Recommended operating conditions"

Symbol	Parameter	Condition	Min	Typ	Max	Unit
T <sub>OH</sub>	Output hold time	High-speed	2.5	--	--	ns

9.7.3 SDR12, SDR25, SDR50 modes (up to 100 MHz) (1.8V)

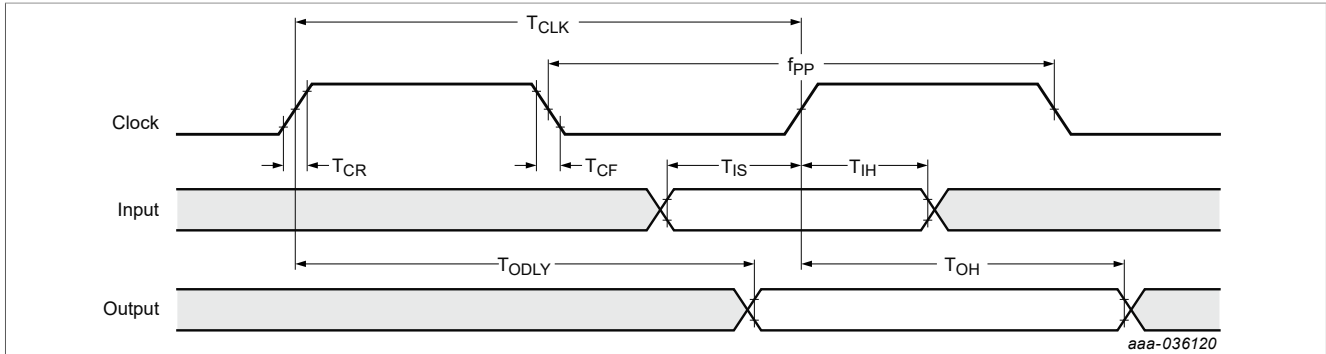

Figure 15. SDIO protocol timing diagram—SDR12, SDR25, SDR50 modes (up to 100MHz) (1.8V)

Table 43. SDIO timing data—SDR12, SDR25, SDR50 modes (up to 100MHz) (1.8V)

Unless otherwise specified, the values apply per Section 8 "Recommended operating conditions"

Symbol	Parameter	Condition	Min	Typ	Max	Unit
f <sub>PP</sub>	Clock frequency	SDR12/25/50	25	--	100	MHz
T <sub>IS</sub>	Input setup time	SDR12/25/50	3	--	--	ns
T <sub>IH</sub>	Input hold time	SDR12/25/50	0.8	--	--	ns
T <sub>CLK</sub>	Clock time	SDR12/25/50	10	--	40	ns
T <sub>CR</sub> , T <sub>CF</sub>	Rise time, fall time T <sub>CR</sub> , T <sub>CF</sub> < 2 ns (max) at 100 MHz C <sub>CARD</sub> = 10 pF	SDR12/25/50	--	--	0.2*T <sub>CLK</sub>	ns
T <sub>ODLY</sub>	Output delay time C <sub>L</sub> ≤ 30 pF	SDR12/25/50	--	--	7.5	ns
T <sub>OH</sub>	Output hold time C <sub>L</sub> = 15 pF	SDR12/25/50	1.5	--	--	ns

9.7.4 DDR50 mode (50MHz) (1.8V)

In DDR50 mode, DAT[3:0] lines are sampled on both edges of the clock (not applicable for CMD line).

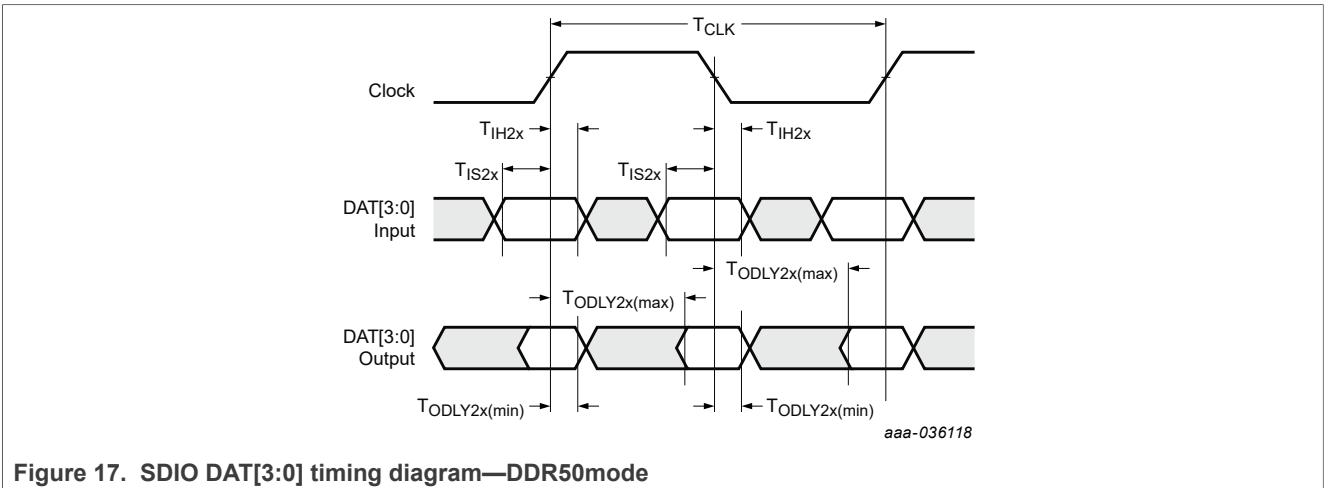

Table 44. SDIO timing data—DDR50 mode (50MHz)

Unless otherwise specified, the values apply per [Section 8 "Recommended operating conditions"](#)

Symbol	Parameter	Condition	Min	Typ	Max	Unit
<b>Clock</b>						
T <sub>CLK</sub>	Clock time 50 MHz (max) between rising edges	DDR50	20	--	--	ns
T <sub>CR</sub> , T <sub>CF</sub>	Rise time, fall time T <sub>CR</sub> , T <sub>CF</sub> < 4.00 ns (max) at 50 MHz C <sub>CARD</sub> = 10 pF	DDR50	--	--	0.2*T <sub>CLK</sub>	ns
Clock Duty	--	DDR50	45	--	55	%
<b>CMD Input (referenced to clock rising edge)</b>						
T <sub>IS</sub>	Input setup time C <sub>CARD</sub> ≤ 10 pF (1 card)	DDR50	6	--	--	ns
T <sub>IH</sub>	Input hold time C <sub>CARD</sub> ≤ 10 pF (1 card)	DDR50	0.8	--	--	ns
<b>CMD Output (referenced to clock rising edge)</b>						
T <sub>ODLY</sub>	Output delay time during data transfer mode C <sub>L</sub> ≤ 30 pF (1 card)	DDR50	--	--	13.7	ns

<b>DAT[3:0] Output (referenced to clock rising and falling edges)</b>						
T <sub>ODLY2x (max)</sub>	Output delay time during data transfer mode C <sub>L</sub> ≤ 25 pF (1 card)	DDR50	--	--	7.0	ns
T <sub>ODLY2x (min)</sub>	Output hold time C <sub>L</sub> ≥ 15 pF (1 card)	DDR50	1.5	--	--	ns

### 9.7.5 SDIO internal pull-up/pull-down specifications

Table 45. SDIO internal pull-up/pull-down specifications

Unless otherwise specified, the values apply per [Section 8 "Recommended operating conditions"](#)

Parameter	Condition	Min	Typ	Max	Unit
Internal nominal pull-up/pull-down resistance	--	60	90	120	kΩ

### 9.8 High-speed UART specifications

The UART Tx and Rx pins are powered by VIO voltage supply.

See [Section 9.1.1 "VIO DC characteristics"](#) for DC specifications.

Figure 18. UART timing diagram

Table 46. UART timing data <sup>[1]</sup>

Unless otherwise specified, the values apply per [Section 8 "Recommended operating conditions"](#)

Symbol	Parameter	Condition	Min	Typ	Max	Units
T <sub>BAUD</sub>	Baud rate	26 MHz or 40 MHz input clock	250	--	--	ns

[1] The acceptable deviation from the UART Rx target baud rate is ±3%.

### 9.9 Audio interface specifications

The device has two audio interfaces: I2S interface and PCM interface.

#### 9.9.1 I2S interface specifications

The I2S pins are powered by VIO voltage supply. See [Section 9.1.1 "VIO DC characteristics"](#) for the specifications.

#### 9.9.2 PCM interface specifications

The PCM pins are powered by VIO voltage supply. See [Section 9.1.1 "VIO DC characteristics"](#) for specifications.

Master Mode

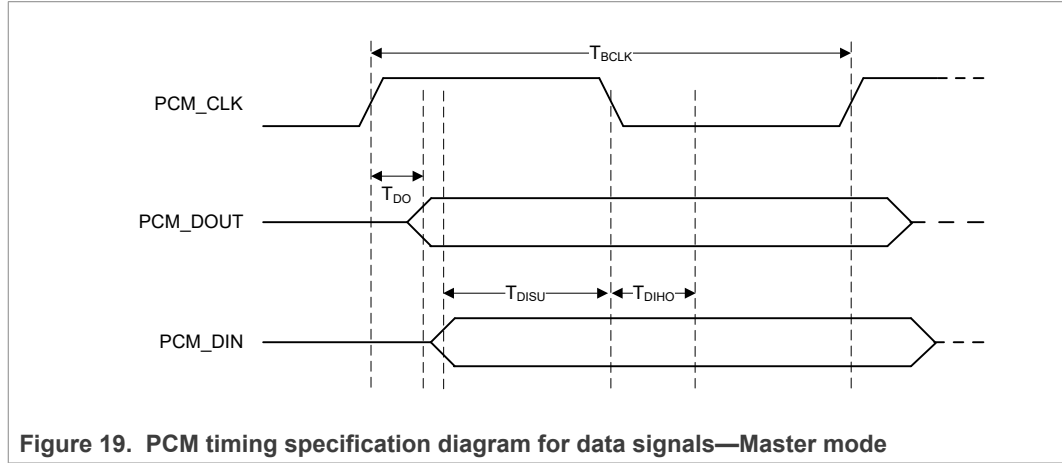

Figure 19. PCM timing specification diagram for data signals—Master mode

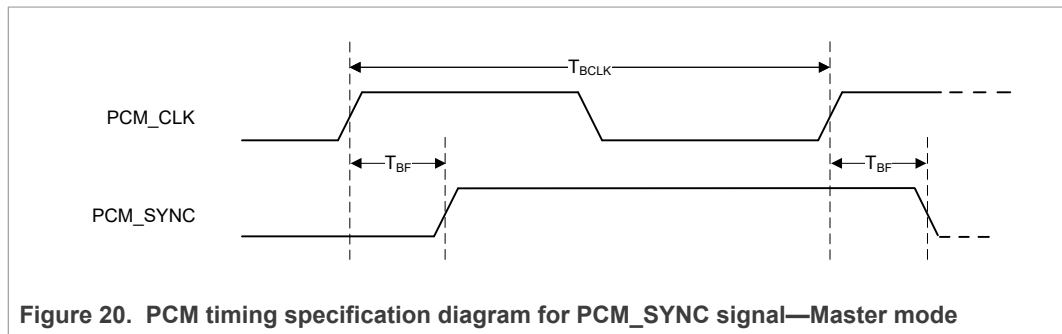

Figure 20. PCM timing specification diagram for PCM\_SYNC signal—Master mode

Table 47. PCM Timing Specification Data—Master Mode

Unless otherwise specified, the values apply per [Section 8 "Recommended operating conditions"](#)

Symbol	Parameter	Condition	Min	Typ	Max	Unit
$F_{BCLK}$	Bit clock frequency	--	--	2/2.048	--	MHz
Duty Cycle <sub>BCLK</sub>	Bit clock duty cycle	--	0.4	0.5	0.6	--
$T_{BCLK\ rise/fall}$	PCM_CLK rise/fall time	--	--	3	--	ns
$T_{DO}$	Delay from PCM_CLK rising edge to PCM_DOUT rising edge	--	--	--	15	ns
$T_{DISU}$	Setup time for PCM_DIN before PCM_CLK falling edge	--	20	--	--	ns
$T_{DIHO}$	Hold time for PCM_DIN after PCM_CLK falling edge	--	15	--	--	ns
$T_{BF}$	Delay from PCM_CLK rising edge to PCM_SYNC rising edge	--	--	--	15	ns

Slave Mode

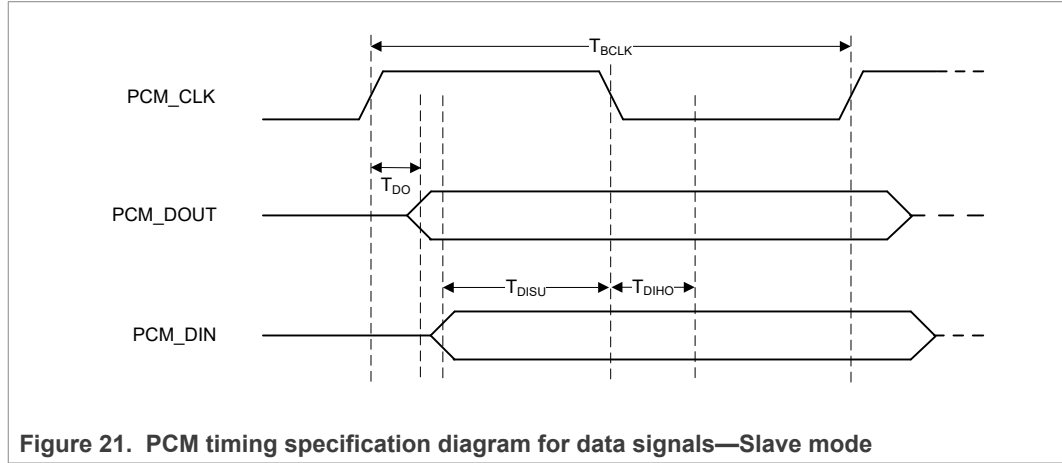

Figure 21. PCM timing specification diagram for data signals—Slave mode

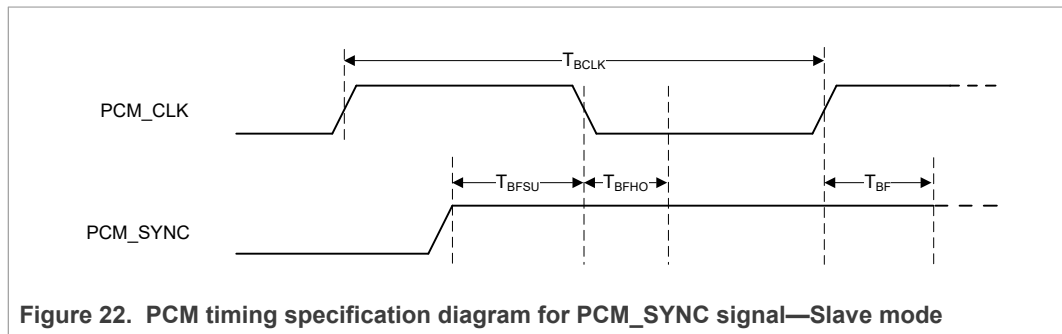

Figure 22. PCM timing specification diagram for PCM\_SYNC signal—Slave mode

Table 48. PCM timing specification data—Slave mode

Unless otherwise specified, the values apply per [Section 8 "Recommended operating conditions"](#)

Symbol	Parameter	Condition	Min	Typ	Max	Unit
$F_{BCLK}$	Bit clock frequency	--	--	2/2.048	--	MHz
Duty Cycle <sub>BCLK</sub>	Bit clock duty cycle	--	0.4	0.5	0.6	--
$T_{BCLK\ rise/fall}$	PCM_CLK rise/fall time	--	--	3	--	ns
$T_{DO}$	Delay from PCM_CLK rising edge to PCM_DOUT rising edge	--	--	--	30	ns
$T_{DISU}$	Setup time for PCM_DIN before PCM_CLK falling edge	--	15	--	--	ns
$T_{DIHO}$	Hold time for PCM_DIN after PCM_CLK falling edge	--	10	--	--	ns
$T_{BFSU}$	Setup time for PCM_SYNC before PCM_CLK falling edge	--	15	--	--	ns
$T_{BFHO}$	Hold time for PCM_SYNC after PCM_CLK falling edge	--	10	--	--	ns

## 9.10 Reference clock specifications

### 9.10.1 External crystal oscillator specifications

**Note:** The reference clock from the external crystal oscillator requires a CMOS input signal.

**Table 49. Clock DC specifications** <sup>[1]</sup>

Unless otherwise specified, the values apply per [Section 8 "Recommended operating conditions"](#)

Parameter	Condition	Min	Typ	Max	Unit
Single-ended high-level voltage	--	--	--	1.8	V
Single-ended low-level voltage	--	0	--	--	V
Clock amplitude (pk-pk)	--	0.5	--	1	V
Mid-point slope	--	125	--	--	MV/s

[1] AC-coupling capacitor is integrated into the SoC.

**Table 50. 26 MHz clock timing**

Unless otherwise specified, the values apply per [Section 8 "Recommended operating conditions"](#)

Parameter	Condition	Min	Typ	Max	Unit
XO26 period	--	38.46 - 20 ppm	38.46	38.46 + 20 ppm	ns
XO26 rise time	--	--	--	5.00	ns
XO26 fall time	--	--	--	5.00	ns
XO26 duty cycle	--	48.05	50	51.95	%

**Table 51. 40 MHz clock timing**

Unless otherwise specified, the values apply per [Section 8 "Recommended operating conditions"](#)

Parameter	Condition	Min	Typ	Max	Unit
XO40 period	--	25.00 - 20 ppm	25.00	25.00 + 20 ppm	ns
XO40 rise time	--	--	--	2.00	ns
XO40 fall time	--	--	--	2.00	ns
XO40 duty cycle	--	47	50	53	%

**Table 52. Phase noise—2.4 GHz operation**

Unless otherwise specified, the values apply per [Section 8 "Recommended operating conditions"](#)

Parameter	Condition	Min	Typ	Max	Unit
Fref = 26 MHz	Offset = 1 kHz	--	--	-126	dBc/Hz
	Offset = 10 kHz	--	--	-137	dBc/Hz
	Offset = 100 kHz	--	--	-145	dBc/Hz
	Offset > 1 MHz	--	--	-145	dBc/Hz
Fref = 40 MHz	Offset = 1 kHz	--	--	-126	dBc/Hz
	Offset = 10 kHz	--	--	-137	dBc/Hz
	Offset = 100 kHz	--	--	-145	dBc/Hz
	Offset > 1 MHz	--	--	-145	dBc/Hz

**Table 53. Phase noise—5 GHz operation**

Unless otherwise specified, the values apply per [Section 8 "Recommended operating conditions"](#)

Parameter	Test Conditions	Min	Typ	Max	Unit
Fref = 26 MHz	Offset = 1 kHz	--	--	-130	dBc/Hz
	Offset = 10 kHz	--	--	-150	dBc/Hz
	Offset = 100 kHz	--	--	-156	dBc/Hz
	Offset > 1 MHz	--	--	-156	dBc/Hz
Fref = 40 MHz	Offset = 1 kHz	--	--	-130	dBc/Hz
	Offset = 10 kHz	--	--	-150	dBc/Hz
	Offset = 100 kHz	--	--	-156	dBc/Hz
	Offset > 1 MHz	--	--	-156	dBc/Hz

### 9.10.2 External crystal specifications

**Table 54. External crystal specifications**

Unless otherwise specified, the values apply per [Section 8 "Recommended operating conditions"](#)

Parameter	Condition	Min	Typ	Max	Unit
Fundamental frequencies	--	--	26 (40)	--	MHz
Resonance mode	--	--	A1, Fundamental	--	--
Equivalent differential load capacitance	--	--	5	--	pF
Shunt capacitance	--	--	2	--	pF
Frequency tolerance	Over process at 25°C	--	±10	--	ppm
Frequency stability	Over operating temperature	--	±10	--	ppm
Aging	--	--	±2	--	ppm/5 years
Series resistance (ESR)	26 MHz	--	--	60	Ω
	40 MHz	--	--	60	Ω
Insulation resistance	at DC 100V	500	--	--	MΩ
Drive level	--	150	--	--	μW

### 9.10.3 External sleep clock specifications

**Table 55. External sleep clock specifications** <sup>[1]</sup>

Unless otherwise specified, the values apply per [Section 8 "Recommended operating conditions"](#)

Parameter	Min	Typ	Max	Unit
Clock frequency range/accuracy • CMOS input clock signal type • ±250 ppm (initial, aging, temperature)	--	32.768	--	kHz
Phase noise requirement (@ 100 kHz)	--	-125	--	dBc/Hz
Cycle jitter	--	1.5	--	ns (RMS)
Slew rate limit (10-90%)	--	--	100	ns
Duty cycle tolerance	20	--	80	%

[1] Voltage input level = 1.8V. See [Section 9.1.1 "VIO DC characteristics"](#).

9.11 Power down (PDn) pin specifications

9.11.1 PDn asserted low—All power supplies good

Figure 23 and Table 56 show the specifications for the PDn signal when it is asserted (low) while all power supplies to the device are good.

Figure 23. PDn pin (Power-down) timing—Power remains high at PDn assertion

Table 56. PDn pin (Power Down) specifications—Power remains high at PDn assertion

Unless otherwise specified, the values apply per Section 8 "Recommended operating conditions"

Symbol	Parameter	Condition	Min	Typ	Max	Unit
$T_{PU\_RESET}$	Valid power to PDn de-asserted	--	0	--	--	ms
$T_{RPW}$	PDn pulse width	--	1 <sup>[1]</sup>	--	--	$\mu$ s
$V_{IH}$	Input high voltage	--	1.4	--	4.5	V
$V_{IL}$	Input low voltage	--	-0.4	--	0.5	V

[1] Minimum value guaranteed for a valid reset. Smaller values may put the device in an undefined state.

9.11.2 PDn asserted low—One or more power supplies ramp down

Figure 24 and Table 57 show the specifications for the PDn signal when it is asserted (low) while 1 or more of the power supplies (including V<sub>CORE</sub>) ramps down. When the integrated LDO is used, V<sub>CORE</sub> will ramp down when PDn is asserted.

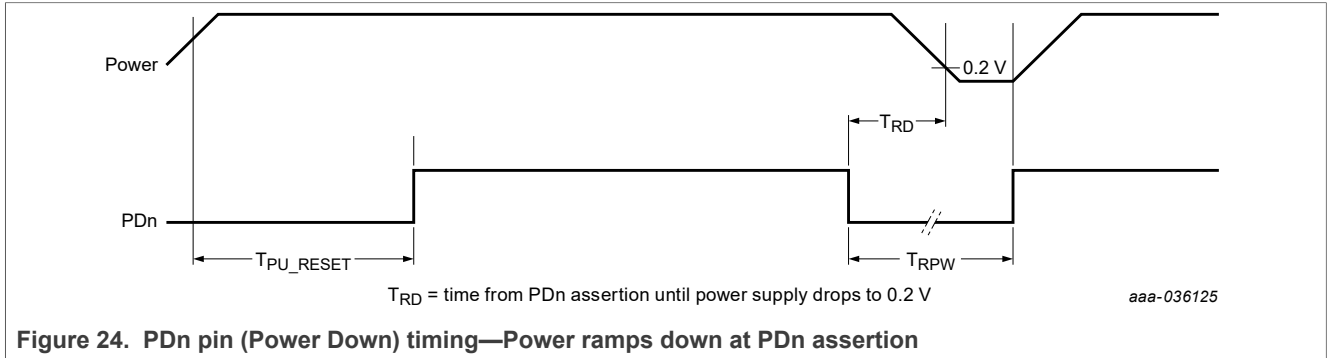

Figure 24. PDn pin (Power Down) timing—Power ramps down at PDn assertion

Table 57. PDn pin (Power Down) specifications—Power ramps down at PDn assertion

Unless otherwise specified, the values apply per Section 8 "Recommended operating conditions"

Symbol	Parameter	Condition	Min	Typ	Max	Unit
T <sub>PU_RESET</sub>	Valid power to PDn de-asserted	--	0	--	--	ms
T <sub>RPW</sub>	PDn pulse width	--	T <sub>RD</sub> <sup>[1]</sup>	--	--	μs
V <sub>IH</sub>	Input high voltage	--	1.4	--	4.5	V
V <sub>IL</sub>	Input low voltage	--	-0.4	--	0.2	V

[1] Minimum value guaranteed for a valid reset. Smaller values may put the device in an undefined state.

### 9.12 Configuration pin specifications

For a list of configuration pins, see [Section 5.6 "Configuration pins"](#).

**Table 58. Configuration pin specifications** <sup>[1]</sup>

Unless otherwise specified, the values apply per [Section 8 "Recommended operating conditions"](#)

Parameter	Condition	Min	Typ	Max	Unit
Internal weak pull-up resistance	Around 1 ms following any reset	--	800	--	kΩ
Internal nominal pull-up resistance	Around 1 ms following any reset	--	100	--	kΩ

[1] After approximately 1 ms, the configuration pins become functional pins.

### 9.13 JTAG interface specifications

JTAG interface pins are powered by VIO voltage supply.

See [Section 9.1.1 "VIO DC characteristics"](#) for specifications.

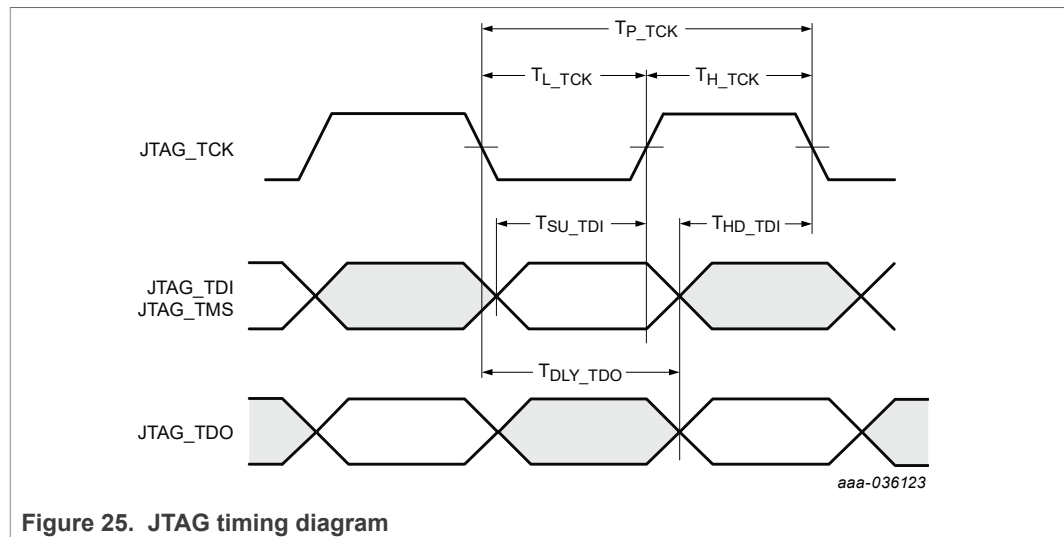

Figure 25. JTAG timing diagram

**Table 59. JTAG timing data** <sup>[1]</sup>

Unless otherwise specified, the values apply per [Section 8 "Recommended operating conditions"](#)

Symbol	Parameter	Condition	Min	Typ	Max	Unit
$T_{P\_TCK}$	TCK period	--	40	--	--	ns
$T_{H\_TCK}$	TCK high	--	12	--	--	ns
$T_{L\_TCK}$	TCK low	--	12	--	--	ns
$T_{SU\_TDI}$	TDI, TMS to TCK setup time	--	10	--	--	ns
$T_{HD\_TDI}$	TDI, TMS to TCK hold time	--	10	--	--	ns
$T_{DLY\_TDO}$	TCK to TDO delay	--	0	--	15	ns

[1] Does not apply to JTAG enabled by the JTAG\_TMS pin.

## 10 Package information

### 10.1 Package thermal conditions

#### 10.1.1 HVQFN68 thermal conditions

Table 60. Package thermal conditions—HVQFN68

Symbol	Parameter	Condition	Typ	Units
$\theta_{JA}$	Thermal resistance Junction to ambient of package. $\theta_{JA} = (T_J - T_A) / P$ P = total power dissipation	JEDEC 3 in. x 4.5 in. 4-layer PCB no air flow	28.4	°C/W
		JEDEC 3 in. x 4.5 in. 4-layer PCB 1 meter/sec air flow	27.6	°C/W
		JEDEC 3 in. x 4.5 in. 4-layer PCB 2 meter/sec air flow	26.1	°C/W
		JEDEC 3 in. x 4.5 in. 4-layer PCB 3 meter/sec air flow	25.3	°C/W
$\psi_{JT}$	Thermal characteristic parameter Junction to top-center of package. $\psi_{JT} = (T_J - T_{TOP}) / P$ $T_{TOP}$ = temperature on top-center of package	JEDEC 3 in. x 4.5 in. 4-layer PCB no air flow	0.44	°C/W
$\psi_{JB}$	Thermal characteristic parameter Junction to bottom surface, center of PCB. $\psi_{JB} = (T_J - T_B) / P$ $T_B$ = surface temperature of PCB	JEDEC 3 in. x 4.5 in. 4-layer PCB no air flow	15.4	°C/W
$\theta_{JC}$	Thermal resistance Junction to case of the package. $\theta_{JC} = (T_J - T_C) / P_{TOP}$ $T_C$ = temperature on top-center of package $P_{TOP}$ = power dissipation from top of package	JEDEC 3 in. x 4.5 in. 4-layer PCB no air flow	13.0	°C/W
$\theta_{JB}$	Thermal resistance Junction to board of package. $\theta_{JB} = (T_J - T_B) / P_{BOTTOM}$ $P_{BOTTOM}$ = power dissipation from bottom of package to PCB surface	JEDEC 3 in. x 4.5 in. 4-layer PCB no air flow	15.6	°C/W

## 10.1.2 WLCSP76 thermal conditions

Table 61. Package thermal conditions—WLCSP76

Symbol	Parameter	Board type <sup>[1]</sup>	Typ	Units
$\theta_{JA}$	Junction to ambient thermal resistance <sup>[2]</sup> $\theta_{JA} = (T_J - T_A) / P$ P = total power dissipation	JESD51-9, 2s2p	37.6	°C/W
$\Psi_{JT}$	Junction to top of package thermal characterization parameter <sup>[2]</sup> $\Psi_{JT} = (T_J - T_{TOP}) / P$ $T_{TOP}$ = temperature on top-center of package	JESD51-9, 2s2p	1.3	°C/W

[1] The thermal test board meets JEDEC specification for this package (JESD51-9).

[2] Determined in accordance to JEDEC JESD51-2A natural convection environment. Thermal resistance data in this report is solely for a thermal performance comparison of one package to another in a standardized specified environment. It is not meant to predict the performance of a package in an application-specific environment.

10.2 Package mechanical drawing

Table 62. Package information

Package name	Link to package information on NXP website
HVQFN68	<a href="#">SOT2107-1</a>
WLCSP76	<a href="#">SOT2073-1</a>

10.2.1 HVQFN68 mechanical drawing

Figure 26. HVQFN68 package mechanical drawing

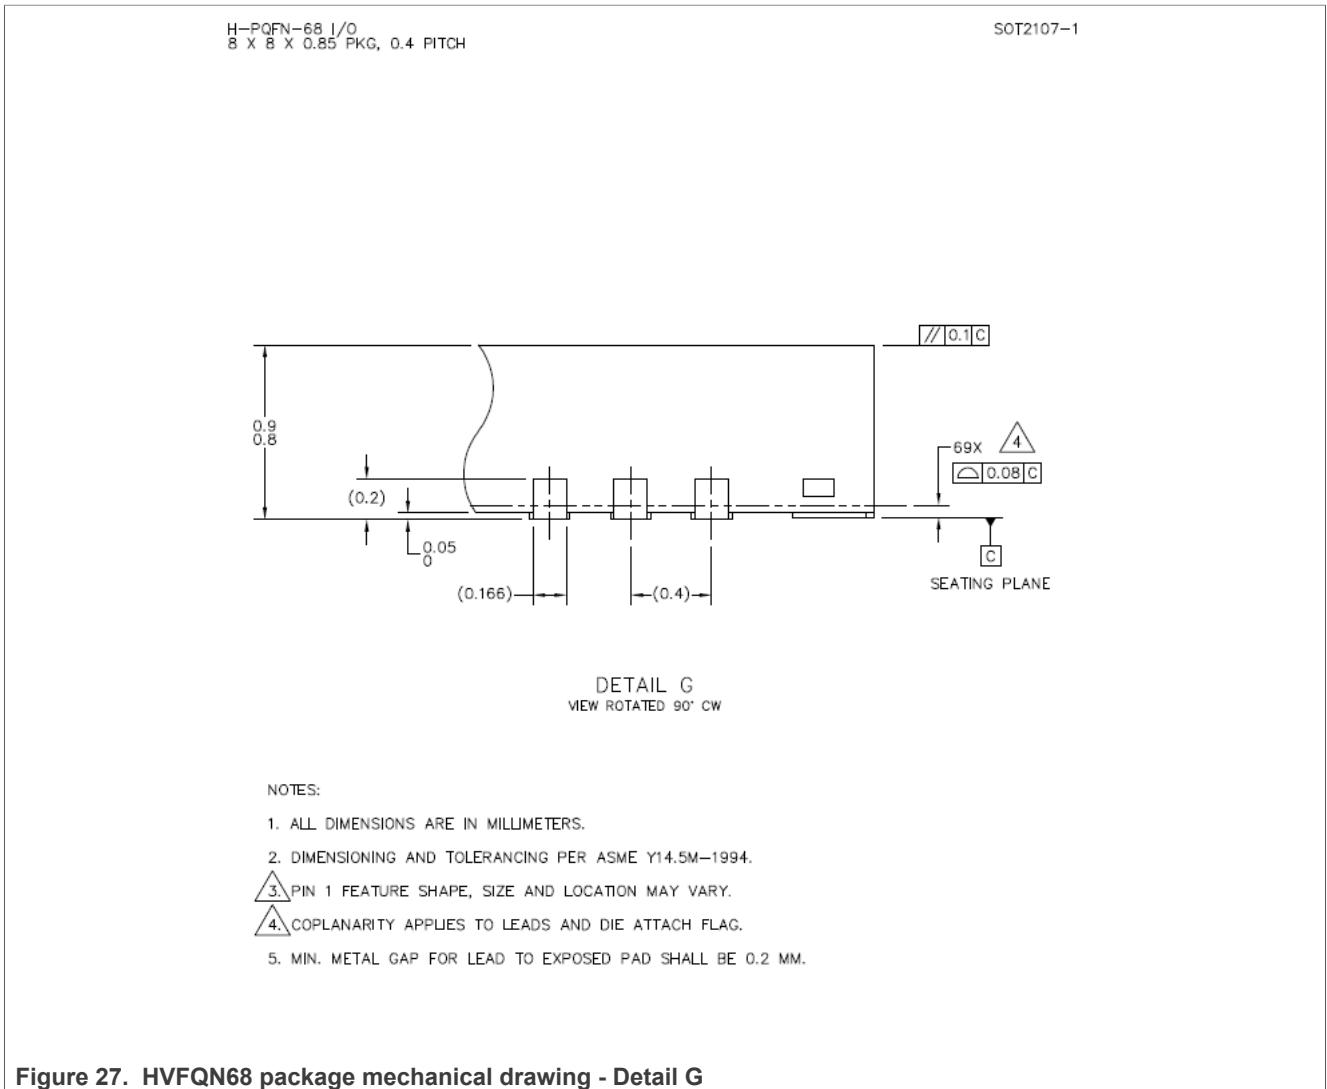

Figure 27. HVFQFN68 package mechanical drawing - Detail G

10.2.2 WLCSP76 mechanical drawing

DETAIL E

NOTES:

1. ALL DIMENSIONS IN MILLIMETERS.
2. DIMENSIONING AND TOLERANCING PER ASME Y14.5M-1994.
3. PIN A1 FEATURE SHAPE, SIZE AND LOCATION MAY VARY.
4. MAXIMUM SOLDER BALL DIAMETER MEASURED PARALLEL TO DATUM C.
5. DATUM C, THE SEATING PLANE, IS DETERMINED BY THE SPHERICAL CROWNS OF THE SOLDER BALLS.
6. THIS PACKAGE HAS A BACK SIDE COATING THICKNESS OF 0.025.

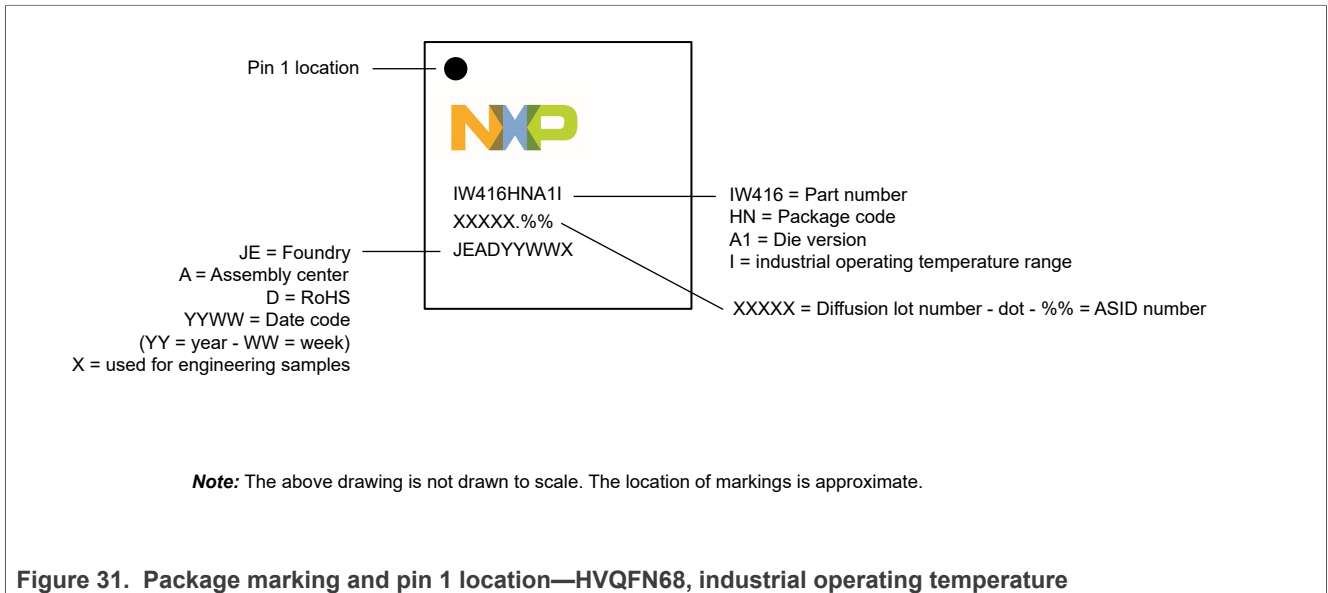

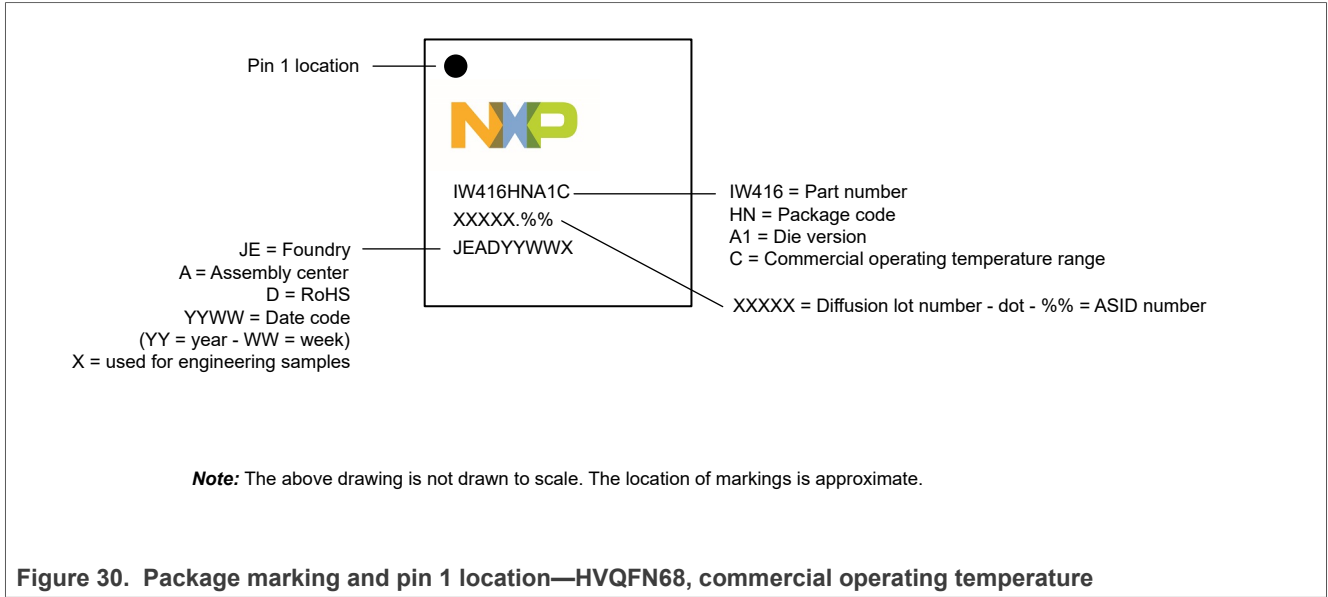

Backside coating included

Figure 29. WLCSP76 package mechanical drawing - Detail E

### 10.3 Package marking

#### 10.3.1 HVFQN68 marking

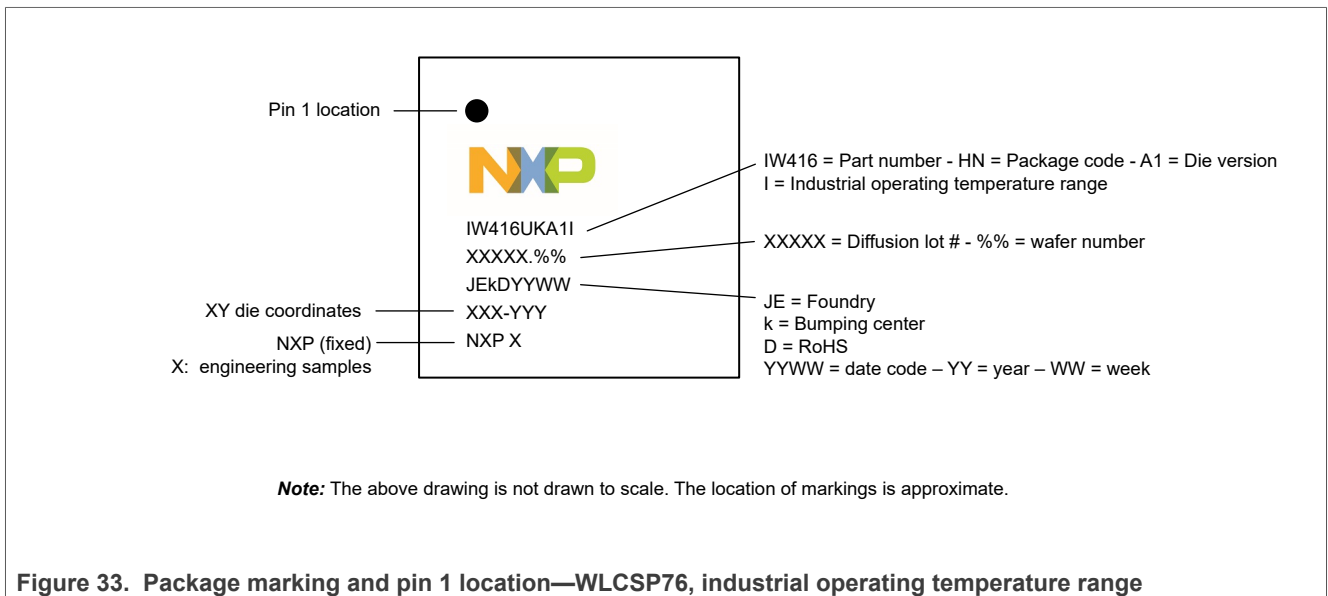

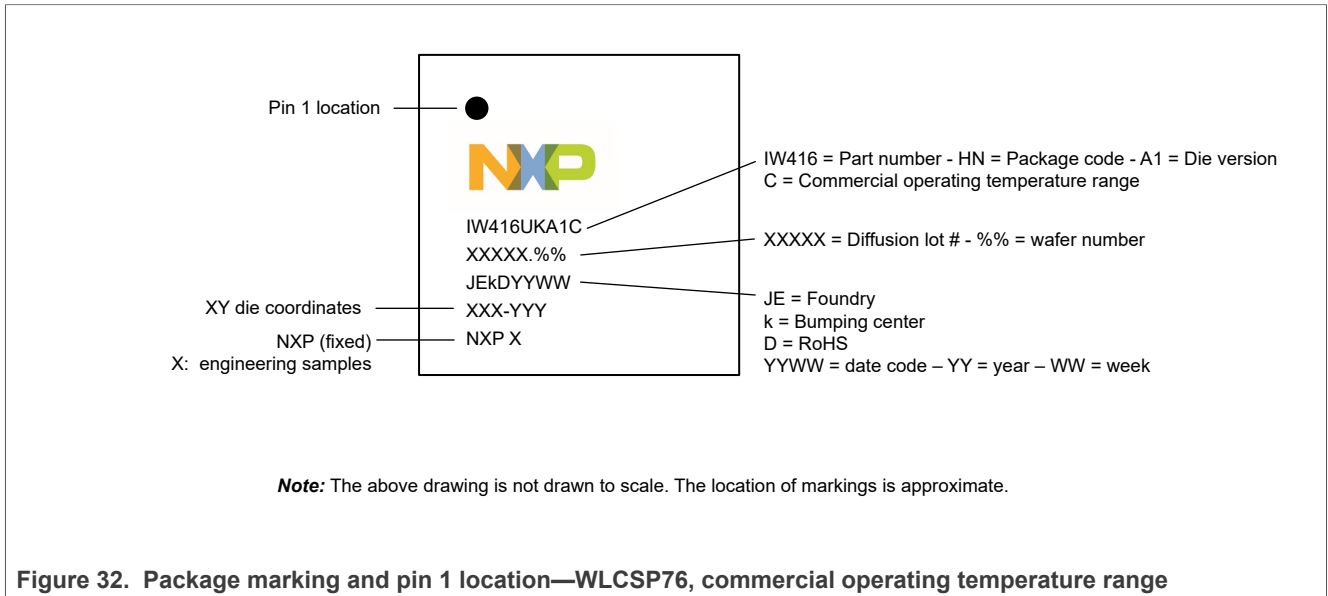

Figure 30 and Figure 31 show the location of pin 1 and describe each line of the package marking on HVQFN68.

10.3.2 WLCSP76 marking

Figure 32 and Figure 33 show the location of pin 1 and describes each line of the package marking on the WLCSP76.

## 11 Acronyms and abbreviations

Table 63. Acronyms and abbreviations

Acronym	Definition
A2DP	Advanced audio distribution profiles
ABR	Automatic baud rate
ACK	Acknowledgment
ADAS	Advanced driver assistance systems
ADC	Analog-to-digital converter
AES	Advanced encryption standard
AFC	Automatic frequency correction
AFH	Adaptive frequency hopping
AGC	Automatic gain control
AHB	Advanced high-performance bus
AIFS	Arbitration inter-frame space
AoA	Angle of arrival
AoD	Angle of departure
AP	Access point
APB	Advanced peripheral bus
API	Application program interface
ARM	Advanced RISC machine
ATIM	Announcement traffic indication message
BAMR	Base address mask register
BAR	Base address register
BBU	Baseband processor unit
BCB	Benzocyclobutene (flip chip bump process)
BDR	Basic data rate
BER	Bit error rate
BOM	Bill of materials
BR	Baud rate
BRF	Bluetooth RF unit
BSS	Basic service set
BSSID	Basic service set identifier
BTM	BSS transition management
BTU	Bluetooth baseband unit
BWQ	Bandwidth queue
CBC	Cipher block chaining
CBP	Contention-based period

Table 63. Acronyms and abbreviations...continued

Acronym	Definition
CCA	Clear channel assessment
CCK	Complementary code keying
CCMP	Counter mode CBC-MAC protocol
CDE	Close descriptor enable
CFP	Contention-free period
CFQ	Contention-free queue
CID	Connection identifier
CIS	Card information structure
CIU	CPU interface unit
CMD	Command
CMQ	Control management queue
CRC	Cyclic redundancy check
CS	Card select
CSL	Coordinated sampled listening
CSMA/CA	Carrier sense multiple access / collision avoidance
CSMA/CD	Carrier sense multiple access / collision detection
CSU	Clocked serial unit
CTS	Clear to send
DAC	Digital-to-analog converter
DBPSK	Differential binary phase shift keying
DCD	Device controller driver
DCE	Data communication equipment
DCF	Distributed coordination function
DCLA	Direct current level adjustment
DCLB	Digital contactless bridge
DCU	DMA controller unit
DFS	Dynamic frequency selection
DIFS	Distributed inter frame space
DMA	Direct memory access
dQH	Device queue head
DQPSK	Differential quadrature phase shift keying
DSM	Distribution system medium
DSP	Digital signal processor
DSRC	Dedicated short range communications
dTD	Linked list transfer descriptors
DTIM	Delivery traffic indication message

Table 63. Acronyms and abbreviations...continued

Acronym	Definition
DUP	Duplicated packet
DVSC	Digital voltage scaling control
EAP	Extensible authentication protocol
EBRAM	Extended block random access memory
ECDSA	Elliptic curve digital signature algorithm
ED	Energy detect
EDCA	Enhanced distributed channel access
EEPROM	Electrically erasable programmable read only memory
EIFS	Extended inter frame Space
EMC	Electromagnetic compatibility
ER	Extended range
ERP-OFDM	Extended rate PHY-orthogonal frequency division multiplexing
ETSI	European telecommunications standards institute
eWLP	Embedded wafer level package
FAE	Field application engineer
FCC	Federal communications commission
FIFO	First in first out
FIPS	Federal information processing standards
FIQ	Fast interrupt request
FPU	Floating point unit
FW	Firmware
GATT	Generic attribute profile
GCMP	Galois/counter mode protocol
GI	Guard interval
GPIO	General purpose input/output
GPL	General Public License
GPT	General purpose timer
GPU	General purpose input/output unit
HID	Human interface device
HIU	Host interface unit
HOGP	HID over GATT profile
HSP	Hands-free profile
HT	High throughput
HVQFN	Thermal enhanced very thin quad flat package
HW	Hardware
I/F	Interface

Table 63. Acronyms and abbreviations...continued

Acronym	Definition
I/Q	In-phase/quadrature
IB	In band
IBSS	Independent basic service set
ICE	In-circuit emulator (or emulation)
ICR	Interrupt cause register
ICU	Interrupt controller unit
ICV	Integrity check value
IE	Information element
IEEE	Institute of electrical and electronics engineers
IEMR	Interrupt event mask register
IFS	inter frame space
IMR	Interrupt mask register
IPG	Inter-packet gap
IPsec	Internet protocol security
IR	Infrared
IRQ	Interrupt request
ISA	Instruction set architecture
ISDN	Integrated services digital network
ISM	Industrial, scientific, and medical
ISMR	Interrupt status mask register
ISR	Interrupt status register
JEDEC	Joint electronic device engineering council
JTAG	Joint test action group
LC3	Low complexity communication codec
LDPC	Low density parity check
LE	Low energy
LED	Light emitting diode
LME	Layer management entity
LNA	Low noise amplifier
LPM	Low power management
LSb	Least significant bit
LSB	Least significant byte
LSP	Low-speed peripheral
LTE	Long term evolution
MAC	Media/medium access controller
MC	Memory controller

Table 63. Acronyms and abbreviations...continued

Acronym	Definition
MCI	Microcontroller subsystem
MCS	Modulation and coding scheme
MCU	MAC Control unit
MDI	Modem data interface
MIB	Management information base
MIC	Message integrity code
MII	Media independent interface
MIMO	Multiple input multiple output
MIPS	Million instructions per second
MLME	MAC sublayer management entity
MMI	Modem management interface
MMPDU	MAC management protocol data unit
MMU	Memory management unit
MPDU	MAC protocol data unit
MPU	Memory protection unit
MSb	Most significant bit
MSB	Most significant byte
MSDU	MAC service data unit
MU-MIMO	Multi user MIMO
MU-PPDU	Multi user PPDU
MWS	Mobile wireless system Multimedia wireless system
NAV	Network allocation vector
NBS	Narrow band speech
NDP	Null data packet
NL	No load
NPTR	Next descriptor pointer
Nsts	Number of space time streams
NVIC	Nested vector interrupt controller
OCB	Outside the context of a BSS
OFDM	Orthogonal frequency division multiplexing
OID	Object identifier
OOB	Out of band
OTP	One time programmable
P2P	Peer-to-peer
PA	Power amplifier

Table 63. Acronyms and abbreviations...continued

Acronym	Definition
PAD	Packet assembler/disassembler
PBU	Peripheral bus unit
PC	Point coordinator
PCB	Printed circuit board
PCF	Point coordination function
PCI	Peripheral component interconnect
PCIe	PCI express
PCM	Pulse code modulation
PDn	Power down
PDU	Protocol data unit
PEAP	Protected EAP
PHY	Physical layer
PIFS	Priority inter frame space
PLL	Phase-locked loop
PLME	Physical layer management entity
PMU	Power management unit
POS	Point of sale
POST	Power-on self test
PPDU	PHY protocol data unit
PPK	Per-packet key
PPM	Pulse position modulation
PSK	Pre shared keys
PTA	Packet traffic arbitration
PUF	Physically unclonable function
PWK	Pairwise key
QAM	Quadrature amplitude modulation
QFN	Quad flat non-leaded package
QoS	Quality of service
RA	Receiver address
RBDS	Radio broadcast data system
RDS	Radio data system
RF	Radio frequency
RFID	Radio frequency identification
RIFS	Reduced inter frame space
RISC	Reduced instruction set computer
ROM	Read only memory

Table 63. Acronyms and abbreviations...continued

Acronym	Definition
RSSI	Receiver signal strength indication
RTC	Real time clock
RTS	Request to send
RTU	General purpose timer unit
RU	Resource unit
SA	Source address
SAP	Service access point
SCLK	Serial interface clock
SDA	Serial interface data
SDK	Software development kit
SE	Secure element
SFD	Start of frame delimiter
SHA	Secure hash algorithm
SIFS	Short inter frame space
SISO	Single input single output
SIU	Serial interface unit (UART)
SJU	System/software JTAG controller unit
SM	Switch module
SMI	Serial management interface
SNR	Signal-to-noise ratio
SO	Serial out
SoC	System-on-chip
SPDT	Single pole double throw
SPI	Serial peripheral interface
SQU	Internal SRAM unit
SRWB	Serial interface read write
SS	Service set
SSID	Service set identifier
STA	Station
STBC	Space-time block code
SWD	Serial wire debug
SWP	Single wire protocol
SysTick	System tick timer
TA	Transmitter address
TBG	Time base generator
TBTT	Target beacon transmission time

Table 63. Acronyms and abbreviations...continued

Acronym	Definition
TCM	Tightly coupled memory
TCP/IP	Transmission control protocol/internet protocol
TCQ	Traffic category queue
TEE	Trusted execution environment
TIM	Traffic indication map
TKIP	Temporal key integrity protocol
TPC	Transmit power control
TQFP	Thin quad flat pack
TRPC	Transmit rate-based power control
TSC	TKIP sequence counter
TSF	Timing synchronization function
TWT	Target wait time
UART	Universal asynchronous receiver/transmitter
USART	Universal synchronous/asynchronous receiver/transmitter
UBM	Under bump metal
UDP	User datagram protocol
UNII	Unlicensed national information infrastructure
VCO	Voltage controlled oscillator
VHT	Very high throughput
VIF	Voice interface
WAP	Wireless application protocol
WAVE	Wireless access in vehicular environments
WBS	Wide band speech
WCI-2	Wireless coexistence interface 2
WEP	Wired equivalent privacy
WI	Wired interface
Wi-Fi	Hardware implementation of IEEE 802.11 for wireless connectivity
WLAN	Wireless local area network
WLCSP	Wafer level chip scale package
WMM	Wi-Fi multimedia
WPA	Wi-Fi protected access
WPA2	Wi-Fi protected access 2
WPA2-PSK	Wi-Fi protected access 2 - pre shared key
WPA3	Wi-Fi protected access 3
WPA-PSK	Wi-Fi protected access - pre shared key
XIP	Execute in place

Table 63. Acronyms and abbreviations...continued

Acronym	Definition
XOSC	Crystal oscillator
ZIF	Zero intermediate frequency

88W8978 v.1.0	20200110	Objective data sheet	-	-

## 13 Legal information

### 13.1 Data sheet status

Document status <sup>[1][2]</sup>	Product status <sup>[3]</sup>	Definition
Objective [short] data sheet	Development	This document contains data from the objective specification for product development.
Preliminary [short] data sheet	Qualification	This document contains data from the preliminary specification.
Product [short] data sheet	Production	This document contains the product specification.

- [1] Please consult the most recently issued document before initiating or completing a design.
- [2] The term 'short data sheet' is explained in section "Definitions".
- [3] The product status of device(s) described in this document may have changed since this document was published and may differ in case of multiple devices. The latest product status information is available on the Internet at URL <http://www.nxp.com>.

### 13.2 Definitions

**Draft** — A draft status on a document indicates that the content is still under internal review and subject to formal approval, which may result in modifications or additions. NXP Semiconductors does not give any representations or warranties as to the accuracy or completeness of information included in a draft version of a document and shall have no liability for the consequences of use of such information.

**Short data sheet** — A short data sheet is an extract from a full data sheet with the same product type number(s) and title. A short data sheet is intended for quick reference only and should not be relied upon to contain detailed and full information. For detailed and full information see the relevant full data sheet, which is available on request via the local NXP Semiconductors sales office. In case of any inconsistency or conflict with the short data sheet, the full data sheet shall prevail.

**Product specification** — The information and data provided in a Product data sheet shall define the specification of the product as agreed between NXP Semiconductors and its customer, unless NXP Semiconductors and customer have explicitly agreed otherwise in writing. In no event however, shall an agreement be valid in which the NXP Semiconductors product is deemed to offer functions and qualities beyond those described in the Product data sheet.

### 13.3 Disclaimers

**Limited warranty and liability** — Information in this document is believed to be accurate and reliable. However, NXP Semiconductors does not give any representations or warranties, expressed or implied, as to the accuracy or completeness of such information and shall have no liability for the consequences of use of such information. NXP Semiconductors takes no responsibility for the content in this document if provided by an information source outside of NXP Semiconductors. In no event shall NXP Semiconductors be liable for any indirect, incidental, punitive, special or consequential damages (including - without limitation - lost profits, lost savings, business interruption, costs related to the removal or replacement of any products or rework charges) whether or not such damages are based on tort (including negligence), warranty, breach of contract or any other legal theory. Notwithstanding any damages that customer might incur for any reason whatsoever, NXP Semiconductors' aggregate and cumulative liability towards customer for the products described herein shall be limited in accordance with the Terms and conditions of commercial sale of NXP Semiconductors.

**Right to make changes** — NXP Semiconductors reserves the right to make changes to information published in this document, including without limitation specifications and product descriptions, at any time and without

notice. This document supersedes and replaces all information supplied prior to the publication hereof.

**Suitability for use** — NXP Semiconductors products are not designed, authorized or warranted to be suitable for use in life support, life-critical or safety-critical systems or equipment, nor in applications where failure or malfunction of an NXP Semiconductors product can reasonably be expected to result in personal injury, death or severe property or environmental damage. NXP Semiconductors and its suppliers accept no liability for inclusion and/or use of NXP Semiconductors products in such equipment or applications and therefore such inclusion and/or use is at the customer's own risk.

**Applications** — Applications that are described herein for any of these products are for illustrative purposes only. NXP Semiconductors makes no representation or warranty that such applications will be suitable for the specified use without further testing or modification. Customers are responsible for the design and operation of their applications and products using NXP Semiconductors products, and NXP Semiconductors accepts no liability for any assistance with applications or customer product design. It is customer's sole responsibility to determine whether the NXP Semiconductors product is suitable and fit for the customer's applications and products planned, as well as for the planned application and use of customer's third party customer(s). Customers should provide appropriate design and operating safeguards to minimize the risks associated with their applications and products. NXP Semiconductors does not accept any liability related to any default, damage, costs or problem which is based on any weakness or default in the customer's applications or products, or the application or use by customer's third party customer(s). Customer is responsible for doing all necessary testing for the customer's applications and products using NXP Semiconductors products in order to avoid a default of the applications and the products or of the application or use by customer's third party customer(s). NXP does not accept any liability in this respect.

**Limiting values** — Stress above one or more limiting values (as defined in the Absolute Maximum Ratings System of IEC 60134) will cause permanent damage to the device. Limiting values are stress ratings only and (proper) operation of the device at these or any other conditions above those given in the Recommended operating conditions section (if present) or the Characteristics sections of this document is not warranted. Constant or repeated exposure to limiting values will permanently and irreversibly affect the quality and reliability of the device.

**Terms and conditions of commercial sale** — NXP Semiconductors products are sold subject to the general terms and conditions of commercial sale, as published at <http://www.nxp.com/profile/terms>, unless otherwise agreed in a valid written individual agreement. In case an individual agreement is concluded only the terms and conditions of the respective agreement shall apply. NXP Semiconductors hereby expressly objects to applying the customer's general terms and conditions with regard to the purchase of NXP Semiconductors products by customer.

**No offer to sell or license** — Nothing in this document may be interpreted or construed as an offer to sell products that is open for acceptance or the grant, conveyance or implication of any license under any copyrights, patents or other industrial or intellectual property rights.

**Quick reference data** — The Quick reference data is an extract of the product data given in the Limiting values and Characteristics sections of this document, and as such is not complete, exhaustive or legally binding.

**Export control** — This document as well as the item(s) described herein may be subject to export control regulations. Export might require a prior authorization from competent authorities.

**Non-automotive qualified products** — Unless this data sheet expressly states that this specific NXP Semiconductors product is automotive qualified, the product is not suitable for automotive use. It is neither qualified nor tested in accordance with automotive testing or application requirements. NXP Semiconductors accepts no liability for inclusion and/or use of non-automotive qualified products in automotive equipment or applications. In the event that customer uses the product for design-in and use in automotive applications to automotive specifications and standards, customer (a) shall use the product without NXP Semiconductors' warranty of the product for such automotive applications, use and specifications, and (b) whenever customer uses the product for automotive applications beyond NXP Semiconductors' specifications such use shall be solely at customer's own risk, and (c) customer fully indemnifies NXP Semiconductors for any liability, damages or failed product claims resulting from customer design and use of the product for automotive applications beyond NXP Semiconductors' standard warranty and NXP Semiconductors' product specifications.

**Translations** — A non-English (translated) version of a document is for reference only. The English version shall prevail in case of any discrepancy between the translated and English versions.

**Security** — Customer understands that all NXP products may be subject to unidentified or documented vulnerabilities. Customer is responsible for the design and operation of its applications and products throughout their lifecycles to reduce the effect of these vulnerabilities on customer's applications and products. Customer's responsibility also extends to other open and/or proprietary technologies supported by NXP products for use in customer's applications. NXP accepts no liability for any vulnerability. Customer should regularly check security updates from NXP and follow up appropriately. Customer shall select products with security features that best meet rules, regulations, and standards of the intended application and make the ultimate design decisions regarding its products and is solely responsible for compliance with all legal, regulatory, and security related requirements concerning its products, regardless of any information or support that may be provided by NXP. NXP has a Product Security Incident Response Team (PSIRT) (reachable at [PSIRT@nxp.com](mailto:PSIRT@nxp.com)) that manages the investigation, reporting, and solution release to security vulnerabilities of NXP products.

## 13.4 Trademarks

Notice: All referenced brands, product names, service names and trademarks are the property of their respective owners.

**NXP** — wordmark and logo are trademarks of NXP B.V.
