1-of-16 decoder/demultiplexer with input latches

HEF4514B MSI

DESCRIPTION

The HEF4514B is a 1-of-16 decoder/demultiplexer, having four binary weighted address inputs (A_0 to A_3), a latch enable input (EL), and an active LOW enable input (\bar{E}). The 16 outputs (O_0 to O_{15}) are mutually exclusive active HIGH. When EL is HIGH, the selected output is determined by the data on A_n . When EL goes LOW, the

last data present at A_n are stored in the latches and the outputs remain stable. When \bar{E} is LOW, the selected output, determined by the contents of the latch, is HIGH. At \bar{E} HIGH, all outputs are LOW. The enable input (\bar{E}) does not affect the state of the latch. When the HEF4514B is used as a demultiplexer, \bar{E} is the data input and A_0 to A_3 are the address inputs.

Fig.1 Functional diagram.

Fig.2 Pinning diagram.

PINNING

- A_0 to A_3 address inputs
- \bar{E} enable input (active LOW)
- EL latch enable input
- O_0 to O_{15} outputs (active HIGH)

- HEF4514BP(N): 24-lead DIL; plastic (SOT101-1)
- HEF4514BD(F): 24-lead DIL; ceramic (cerdip) (SOT94)
- HEF4514BT(D): 24-lead SO; plastic (SOT137-1)
- (): Package Designator North America

APPLICATION INFORMATION

Some examples of applications for the HEF4514B are:

- Digital multiplexing.
- Address decoding.
- Hexadecimal/BCD decoding.
