#### **PIN CONFIGURATION**

#### **LOGIC SYMBOL**

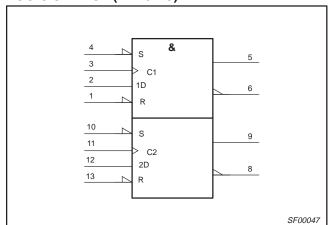

#### **DESCRIPTION**

The 74LVT74 is a dual positive edge-triggered D-type flip-flop featuring individual data, clock, set, and reset inputs; also true and complementary outputs. Set (\$\overline{S}D\$) and reset (\$\overline{R}D\$) are asynchronous active low inputs and operate independently of the clock input. When set and reset are inactive (high), data at the D input is transferred to the Q and \$\overline{Q}\$ outputs on the low-to-high transition of the clock. Data must be stable just one setup time prior to the low-to-high transition of the clock for predictable operation. Clock triggering occurs at a voltage level and is not directly related to the transition time of the positive-going pulse. Following the hold time interval, data at the D input may be changed without affecting the levels of the output.

#### **PIN DESCRIPTION**

| PIN NUMBER | SYMBOL   | NAME AND FUNCTION                 |
|------------|----------|-----------------------------------|
| 2, 12      | D0, D1   | Data inputs                       |
| 3, 11      | CP0, CP1 | Clock inputs (active rising edge) |
| 4, 10      | SD0, SD1 | Set inputs (active LOW)           |
| 1, 13      | RD0, RD1 | Reset inputs (active LOW)         |
| 5, 6, 8, 9 | Qn, Qn   | Data outputs                      |

## 3.3V Dual D-type flip-flop

74LVT74

#### LOGIC DIAGRAM

#### **FUNCTION TABLE**

|    | INP | JTS |   | OUTF | PUTS | OPERATING          |
|----|-----|-----|---|------|------|--------------------|
| SD | RD  | СР  | D | Q    | Q    | MODE               |
| L  | Н   | Х   | Х | Н    | L    | Asynchronous set   |
| Н  | L   | Х   | Х | L    | Н    | Asynchronous reset |
| L  | L   | Х   | Х | Н    | Н    | Undetermined*      |
| Н  | Н   | 1   | h | Н    | L    | Load "1"           |
| Н  | Н   | 1   | I | L    | Н    | Load "0"           |
| Н  | Н   | 1   | Х | NC   | NC   | Hold               |

#### NOTES:

H = High voltage level

h = High voltage level one setup time prior to low-to-high clock transition

L = Low voltage level

 Low voltage level one setup time prior to low-to-high clock transition

NC= No change from the previous setup

X = Don't care

= Low-to-high clock transition

1 = Not low-to-high clock transition

This setup is unstable and will change when either set or reset return to the high level.

#### ABSOLUTE MAXIMUM RATINGS1, 2

| SYMBOL           | PARAMETER                      | PARAMETER CONDITIONS                    |              |    |  |
|------------------|--------------------------------|---|--------------|----|--|
| V <sub>CC</sub>  | DC supply voltage              |   | -0.5 to +4.6 | V  |  |
| I <sub>IK</sub>  | DC input diode current         | V <sub>I</sub> < 0                      | -50          | mA |  |
| VI               | DC input voltage <sup>3</sup>  |   | -0.5 to +7.0 | V  |  |
| I <sub>OK</sub>  | DC output diode current        | output diode current V <sub>O</sub> < 0 |              | mA |  |
| V <sub>OUT</sub> | DC output voltage <sup>3</sup> | Output in Off or High state             | -0.5 to +7.0 | V  |  |
| lau-             | DC output current              | Output in High state                    | -32          | mA |  |

| T <sub>stg</sub> | Storage temperature range      |   | -65 to 150   | °C |  |

#### NOTES:

- Stresses beyond those listed may cause permanent damage to the device. These are stress ratings only and functional operation of the
  device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to
  absolute-maximum-rated conditions for extended periods may affect device reliability.
- 2. The performance capability of a high-performance integrated circuit in conjunction with its thermal environment can create junction temperatures which are detrimental to reliability. The maximum junction temperature of this integrated circuit should not exceed 150°C.
- 3. The input and output negative voltage ratings may be exceeded if the input and output clamp current ratings are observed.

#### RECOMMENDED OPERATING CONDITIONS

| SYMBOL           | PARAMETER   | LIM | UNIT |      |
|------------------|---|-----|------|------|
| 31WBOL           | FARAMETER   | MIN | MAX  | ONIT |
| V <sub>CC</sub>  | DC supply voltage                                   | 2.7 | 3.6  | V    |
| V <sub>I</sub>   | Input voltage                                       | 0   | 5.5  | V    |
| V <sub>IH</sub>  | High-level input voltage                            | 2.0 |      | V    |
| V <sub>IL</sub>  | Low-level Input voltage                             |     | 0.8  | V    |
| I <sub>OH</sub>  | High-level output current                           |     | -20  | mA   |
| I <sub>OL</sub>  | Low-level output current                            |     | 32   | mA   |
| Δt/Δν            | Input transition rise or fall rate; Outputs enabled |     | 10   | ns/V |
| T <sub>amb</sub> | Operating free-air temperature range                | -40 | +85  | °C   |

| Data Sheet Identification | Product Status         | Definition   |  |  |  |  |  |
| Objective Specification   | Formative or in Design | This data sheet contains the design target or goal specifications for product development. Specification may change in any manner without notice.  |  |  |  |  |  |
| Preliminary Specification | Preproduction Product  | This data sheet contains preliminary data, and supplementary data will be published at a later date. Phil Semiconductors reserves the right to make changes at any time without notice in order to improve des and supply the best possible product. |  |  |  |  |  |
| Product Specification     | Full Production        | This data sheet contains Final Specifications. Philips Semiconductors reserves the right to make changes at any time without notice, in order to improve design and supply the best possible product.  |  |  |  |  |  |

Philips Semiconductors and Philips Electronics North America Corporation reserve the right to make changes, without notice, in the products, including circuits, standard cells, and/or software, described or contained herein in order to improve design and/or performance. Philips Semiconductors assumes no responsibility or liability for the use of any of these products, conveys no license or title under any patent, copyright, or mask work right to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified. Applications that are described herein for any of these products are for illustrative purposes only. Philips Semiconductors makes no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

#### LIFE SUPPORT APPLICATIONS

Philips Semiconductors and Philips Electronics North America Corporation Products are not designed for use in life support appliances, devices, or systems where malfunction of a Philips Semiconductors and Philips Electronics North America Corporation Product can reasonably be expected to result in a personal injury. Philips Semiconductors and Philips Electronics North America Corporation customers using or selling Philips Semiconductors and Philips Electronics North America Corporation Products for use in such applications do so at their own risk and agree to fully indemnify Philips Semiconductors and Philips Electronics North America Corporation for any damages resulting from such improper use or sale.

Philips Semiconductors 811 East Arques Avenue P.O. Box 3409 Sunnyvale, California 94088–3409 Telephone 800-234-7381 Philips Semiconductors and Philips Electronics North America Corporation register eligible circuits under the Semiconductor Chip Protection Act.
