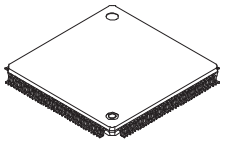
LC75897W

1/3, 1/4-Duty General-Purpose LCD Driver

ON Semiconductor®

www.onsemi.com



SPQFP144 20x20 / SQFP144

Overview

The LC75897PW is 1/3 duty and 1/4 duty general-purpose LCD display driver that can be used for frequency display in electronic tuners under the control of a microcontroller. The LC75897PW can drive an LCD with up to 512 segments directly. The LC75897PW can also control up to 8 general-purpose output ports. The LC75897PW has a built-in of up to three PWM output port channels, which enables to adjust the brightness of the RGB LED backlight.

Features

- Switching between 1/3 duty and 1/4 duty drive techniques under serial data control.
- Switching between 1/2 bias and 1/3 bias drive techniques under serial data control.
- Up to 387 segments for 1/3 duty drive and 512 segments for 1/4 duty drive can be displayed.
- Switching between the segment, general-purpose, PWM, and clock output ports can be controlled using serial data
  (up to 8 general-purpose output ports, up to 3-channel PWM output ports, and one clock output port).
- Serial data input supports CCB* format communication with the system controller.
- Serial data control of the power-saving mode based backup function and all the segments forced off function.
- Serial data control of the frame frequency for common and segment output waveforms.
- Serial data control of switching between the RC oscillator operating mode and external clock operating mode.
- High generality, since display data is displayed directly without decoder intervention.
- Built-in display contrast adjustment circuit
- Independent V_{LCD} for the LCD driver block
- The $\overline{INH}$ pin can force the display to the off state.
- RC oscillator circuit

* Computer Control Bus (CCB) is an ON Semiconductor's original bus format and the bus addresses are controlled by ON Semiconductor.

ORDERING INFORMATION

See detailed ordering and shipping information on page 33 of this data sheet.

LC75897PW/D

Specifications

Absolute Maximum Ratings at Ta = 25°C, V_{SS} = 0 V

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage	V_{DD} max	V_{DD}	−0.3 to +7.0	V
	V_{LCD} max	V_{LCD}	−0.3 to +7.0	
Input voltage	$V_{IN}1$	CE, CL, DI, $\overline{INH}$	−0.3 to +7.0	V
	$V_{IN}2$	OSC	−0.3 to V_{DD}+0.3	
	$V_{IN}3$	$V_{LCD}1$, $V_{LCD}2$	−0.3 to V_{LCD}+0.3	
Output voltage	$V_{OUT}1$	OSC	−0.3 to V_{DD}+0.3	V
	$V_{OUT}2$	$V_{LCD}0$, S1 to S129, COM1 to COM4, P1 to P8	−0.3 to V_{LCD}+0.3	
Output current	$I_{OUT}1$	S1 to S129	300	μA
	$I_{OUT}2$	COM1 to COM4	3	mA
	$I_{OUT}3$	P1 to P8	5	
Allowable power dissipation	Pd max	Ta = 85°C	200	mW
Operating temperature	Topr		−40 to +85	°C
Storage temperature	Tstg		−55 to +125	°C

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

Allowable Operating Ranges at Ta = −40 to +85°C, V_{SS} = 0 V

Parameter	Symbol	Conditions	Ratings			unit
			min	typ	max	
Supply voltage	V_{DD}	V_{DD}	2.7		6.0	V
	V_{LCD}	V_{LCD}, $V_{LCD}0$ = 0.70V_{LCD} to 0.95V_{LCD}	4.0		6.0	
		V_{LCD}, $V_{LCD}0$ = V_{LCD}	2.7		6.0	
Output voltage	$V_{LCD}0$	$V_{LCD}0$	2.7		V_{LCD}	V
Input voltage	$V_{LCD}1$	$V_{LCD}1$		2/3$V_{LCD}0$	$V_{LCD}0$	V
	$V_{LCD}2$	$V_{LCD}2$		1/3$V_{LCD}0$	$V_{LCD}0$	
Input high-level voltage	$V_{IH}1$	CE, CL, DI, $\overline{INH}$	0.8V_{DD}		6.0	V
	$V_{IH}2$	OSC external clock operating mode	0.7V_{DD}		V_{DD}	
Input low-level voltage	$V_{IL}1$	CE, CL, DI, $\overline{INH}$	0		0.2V_{DD}	V
	$V_{IL}2$	OSC external clock operating mode	0		0.3V_{DD}	
Recommended external resistor for RC oscillation	R_{OSC}	OSC RC oscillator operating mode		10		kΩ
Recommended external capacitor for RC oscillation	C_{OSC}	OSC RC oscillator operating mode		470		pF
Guaranteed range of RC oscillation	f_{OSC}	OSC RC oscillator operating mode	150	300	600	kHz
External clock operating frequency	f_{CK}	OSC external clock operating mode [Figure 4]	150	300	600	kHz
External clock duty cycle	D_{CK}	OSC external clock operating mode [Figure 4]	30	50	70	%
Data setup time	tds	CL,DI [Figure 2], [Figure 3]	160			ns
Data hold time	tdh	CL,DI [Figure 2], [Figure 3]	160			ns
CE wait time	tcp	CE,CL [Figure 2], [Figure 3]	160			ns
CE setup time	tcs	CE,CL [Figure 2], [Figure 3]	160			ns
CE hold time	tch	CE,CL [Figure 2], [Figure 3]	160			ns
High-level clock pulse width	tϕH	CL [Figure 2], [Figure 3]	160			ns
Low-level clock pulse width	tϕL	CL [Figure 2], [Figure 3]	160			ns
Rise time	tr	CE, CL, DI [Figure 2], [Figure 3]		160		ns
Fall time	tf	CE, CL, DI [Figure 2], [Figure 3]		160		ns
$\overline{INH}$ switching time	tc	$\overline{INH}$, CE [Figure 5], [Figure 6]	10			μs

Functional operation above the stresses listed in the Recommended Operating Ranges is not implied. Extended exposure to stresses beyond the Recommended Operating Ranges limits may affect device reliability.

Electrical Characteristics for the Allowable Operating Ranges

Parameter	Symbol	Pin	Conditions	Ratings			unit
				min	typ	max	
Hysteresis	V_H	CE, CL, DI, $\overline{INH}$			$0.1V_{DD}$		V
Input high-level current	$I_{IH}1$	CE, CL, DI, $\overline{INH}$	V_I = 6.0 V			5.0	μA
	$I_{IH}2$	OSC	$V_I = V_{DD}$ External clock operating mode			5.0	
Input low-level current	$I_{IL}1$	CE, CL, DI, $\overline{INH}$	V_I = 0 V	−5.0			μA
	$I_{IL}2$	OSC	V_I = 0 V External clock operating mode	−5.0			
Output high-level voltage	$V_{OH}1$	S1 to S129	I_O = −20 μA	$V_{LCD}0$−0.9			V
	$V_{OH}2$	COM1 to COM4	I_O = −100 μA	$V_{LCD}0$−0.9			
	$V_{OH}3$	P1 to P8	I_O = −1 mA	V_{LCD}−0.9			
Output low-level voltage	$V_{OL}1$	S1 to S129	I_O = 20 μA			0.9	V
	$V_{OL}2$	COM1 to COM4	I_O = 100 μA			0.9	
	$V_{OL}3$	P1 to to P8	I_O = 1 mA			0.9	
Output middle-level voltage *1	$V_{MID}1$	COM1 to COM4	1/2 bias, I_O = ±100 μA	$1/2V_{LCD}0$ −0.9		$1/2V_{LCD}0$ +0.9	V
	$V_{MID}2$	S1 to S129	1/3 bias, I_O = ±20 μA	$2/3V_{LCD}0$ −0.9		$2/3V_{LCD}0$ +0.9	
	$V_{MID}3$	S1 to S129	1/3 bias, I_O = ±20 μA	$1/3V_{LCD}0$ −0.9		$1/3V_{LCD}0$ +0.9	
	$V_{MID}4$	COM1 to COM4	1/3 bias, I_O = ±100 μA	$2/3V_{LCD}0$ −0.9		$2/3V_{LCD}0$ +0.9	
	$V_{MID}5$	COM1 to COM4	1/3 bias, I_O = ±100 μA	$1/3V_{LCD}0$ −0.9		$1/3V_{LCD}0$ +0.9	
Oscillator frequency	f_{OSC}	OSC	RC oscillator operating mode R_{OSC} = 10 kΩ C_{OSC} = 470 pF	210	300	390	kHz
Current drain	$I_{DD}1$	V_{DD}	Power-saving mode			10	μA
	$I_{DD}2$	V_{DD}	V_{DD} = 6.0 V, output open, f_{OSC} = 300 kHz		700	1400	
	$I_{LCD}1$	V_{LCD}	Power-saving mode			15	
	$I_{LCD}2$	V_{LCD}	V_{LCD} = 6.0 V, output open, 1/2 bias, f_{OSC} = 300 kHz, $V_{LCD}0 = 0.70V_{LCD}$ to $0.95V_{LCD}$		600	1200	
	$I_{LCD}3$	V_{LCD}	V_{LCD} = 6.0 V, output open, 1/2 bias, f_{OSC} = 300 kHz, $V_{LCD}0 = V_{LCD}$		500	1000	
	$I_{LCD}4$	V_{LCD}	V_{LCD} = 6.0 V, output open, 1/3 bias, f_{OSC} = 300 kHz, $V_{LCD}0 = 0.70V_{LCD}$ to $0.95V_{LCD}$		450	900	
	$I_{LCD}5$	V_{LCD}	V_{LCD} = 6.0 V, output open, 1/3 bias, f_{OSC} = 300kHz, $V_{LCD}0 = V_{LCD}$		350	700	

Note: *1 Excluding the bias voltage generation divider resistors built in the $V_{LCD}0$, $V_{LCD}1$, $V_{LCD}2$, and V_{SS}. (See Figure 1.)

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

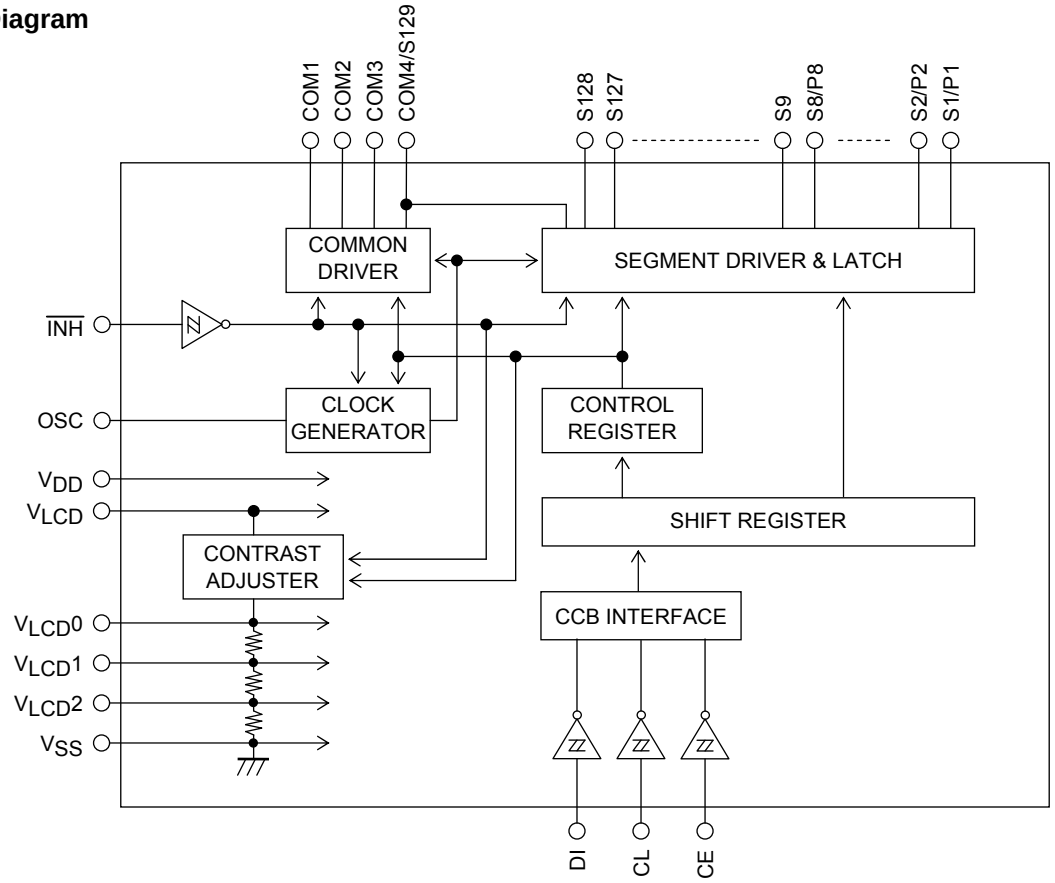
Block Diagram



Pin Functions

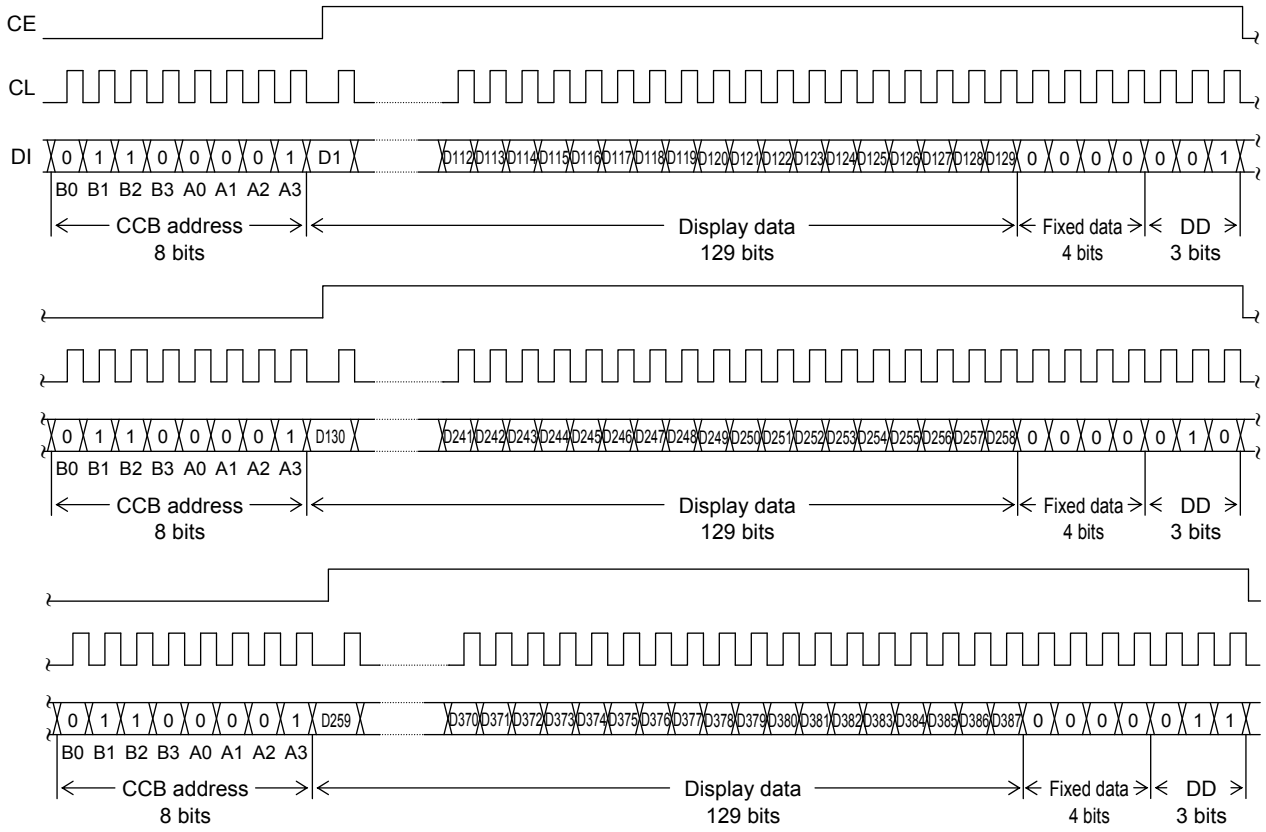
Symbol	Pin No.	Function	Active	I/O	Handling when unused
S1/P1 to S8/P8 S9 to S128	1 to 8 9 to 128	Segment outputs for displaying the display data transferred by serial data input. Also, by the control data, S1/P1 to S3/P3 can be used as a general-purpose output port or PWM output port, while S4/P4 can be used as a general-purpose output port or clock output port and S5/P5 to S8/P8 can be used as a general-purpose output port.	-	O	OPEN
COM1 to COM3 COM4/S129	132 to 130 129	Common driver outputs. The frame frequency is fo [Hz]. The COM4/S129 pin can be used as a segment output in 1/3 duty.	-	O	OPEN
OSC	140	Oscillator connection. An oscillator circuit is formed by connecting an external resistor and capacitor to this pin. This pin can also be used as the external clock input pin as controlled by control data.	-	I/O	V_{DD}
CE CL DI	142 143 144	Serial data transfer inputs. These pins are connected to the control microprocessor. CE: Chip enable CL: Synchronization clock DI: Transfer data	H ↑ -	I I I	GND
$\overline{INH}$	141	Display off control input • $\overline{INH}$ = low (V_{SS}) ...Off S1/P1 to S8/P8 = low (V_{SS}) (These pins are forcibly set to the segment output port function and fixed at the V_{SS} level.) S9 to S128 = low (V_{SS}) COM1 to COM3 = low (V_{SS}) COM4/S129 = low (V_{SS}) OSC = "Z" (high impedance) RC oscillation stopped External clock input inhibited Display contrast adjustment circuit stopped • $\overline{INH}$ = high (V_{DD}) ...On RC oscillation enabled (RC oscillator operating mode) Enables external clock input (external clock operating mode). Display contrast adjustment circuit enabled Note that serial data transfers can be performed when the display is forced off by this pin.	L	I	GND
$V_{LCD}0$	135	LCD drive 3/3 bias voltage (high level) supply. This level can be modified using the display contrast adjustment circuit. However, note that $V_{LCD}0$ must be greater than or equal to 2.7V. Also, since this IC provides the built-in display contrast adjustment circuit, applications must not attempt to provide this level from external circuits.	-	O	OPEN
$V_{LCD}1$	136	LCD drive 2/3 bias voltage (middle level) supply. It is possible to supply the $2/3V_{LCD}0$ voltage to this pin externally. This pin must be shorted to $V_{LCD}2$ if 1/2 bias is used.	-	I	OPEN
$V_{LCD}2$	137	LCD drive 1/3 bias voltage (middle level) supply. It is possible to supply the $1/3V_{LCD}0$ voltage to this pin externally. This pin must be shorted to $V_{LCD}1$ if 1/2 bias is used.	-	I	OPEN
V_{DD}	133	Logic block power supply. Provide a voltage in the range 2.7 to 6.0V.	-	-	-
V_{LCD}	134	LCD driver block power supply. When $V_{LCD}0$ is between $0.70V_{LCD}$ and $0.95V_{LCD}$, supply a voltage in the range 4.0 to 6.0V. When $V_{LCD}0$ and V_{LCD} will be equal, supply a voltage in the range 2.7 to 6.0V.	-	-	-
V_{SS}	138,139	Ground pin. Connect to ground.	-	-	-

Serial Data Transfer Formats

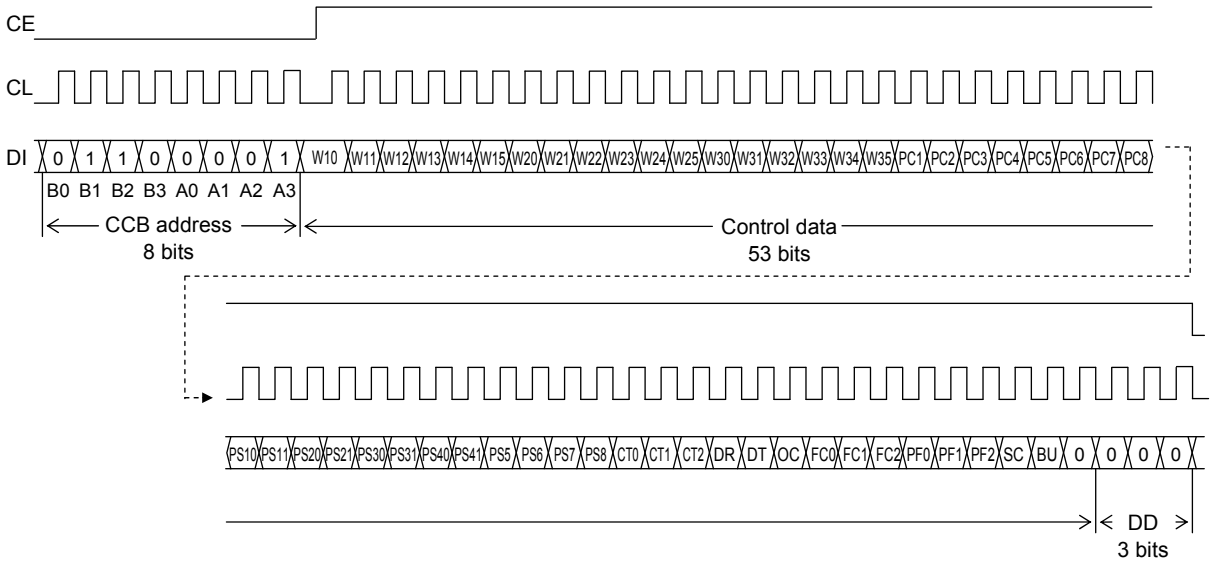
(1) 1/3 duty

1. When CL is stopped at the low level

- When the display data is transferred



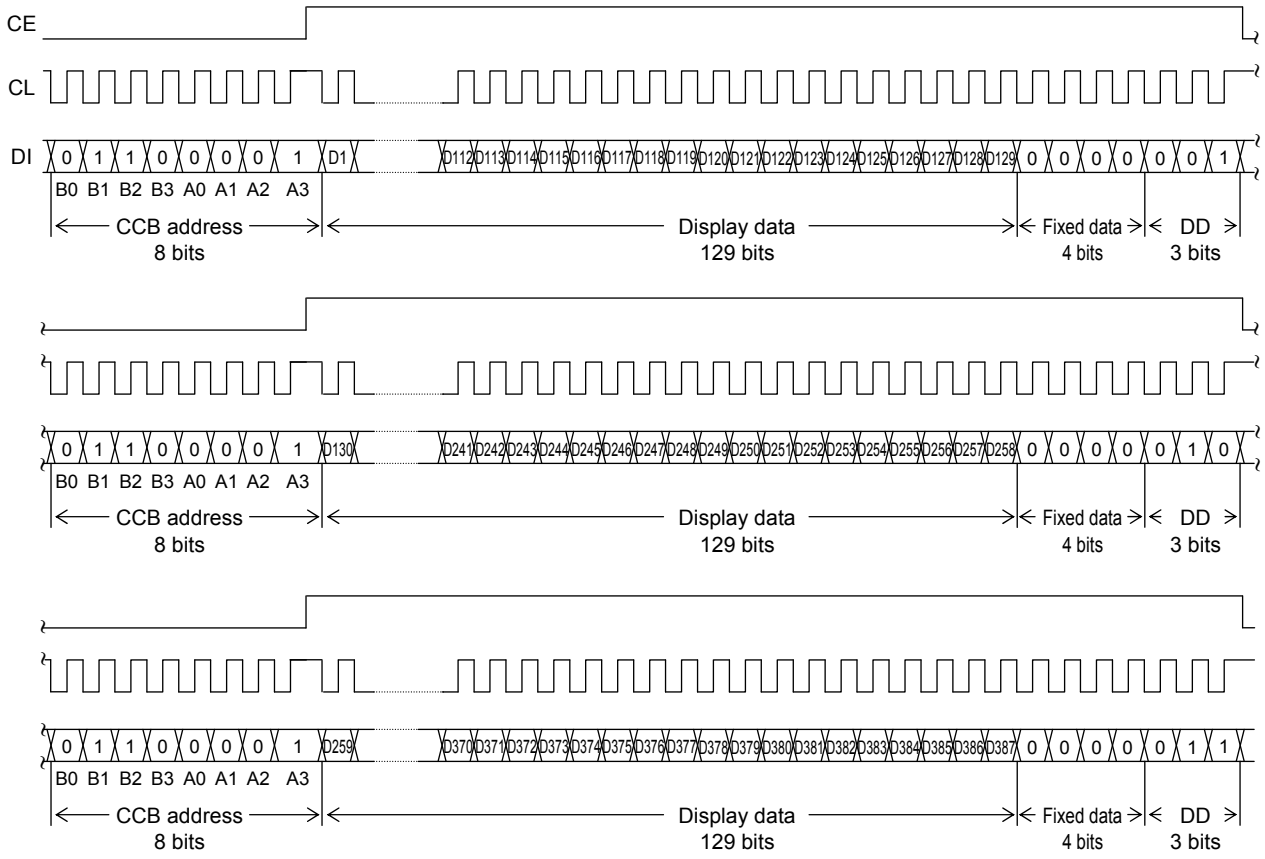
- When the control data is transferred



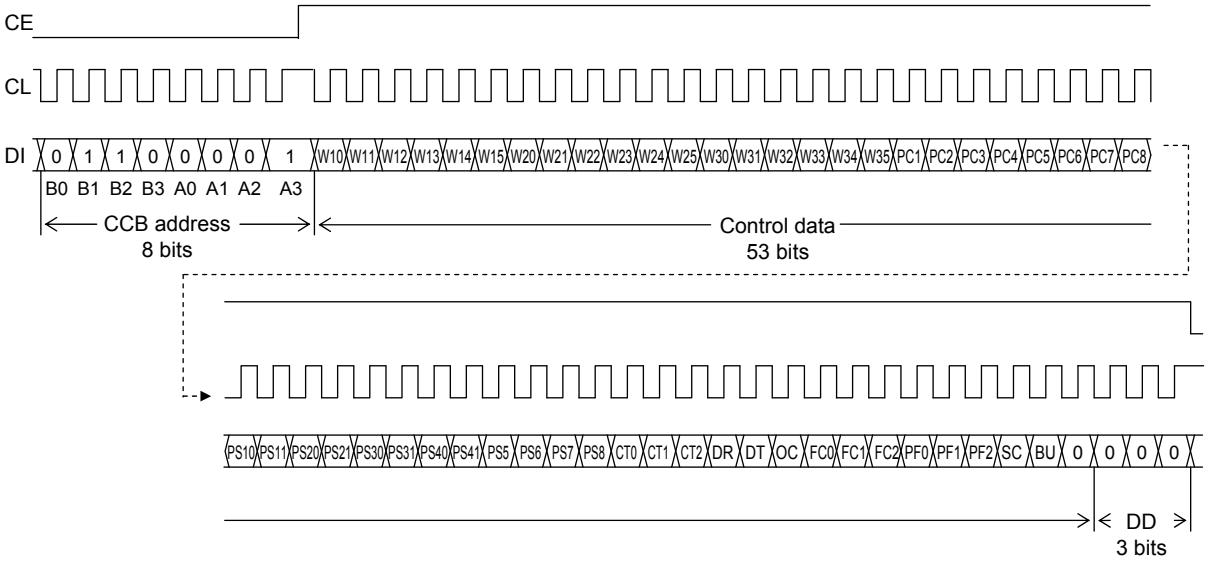
Note: DD is the direction data.

2. When CL is stopped at the high level

- When the display data is transferred



- When the control data is transferred



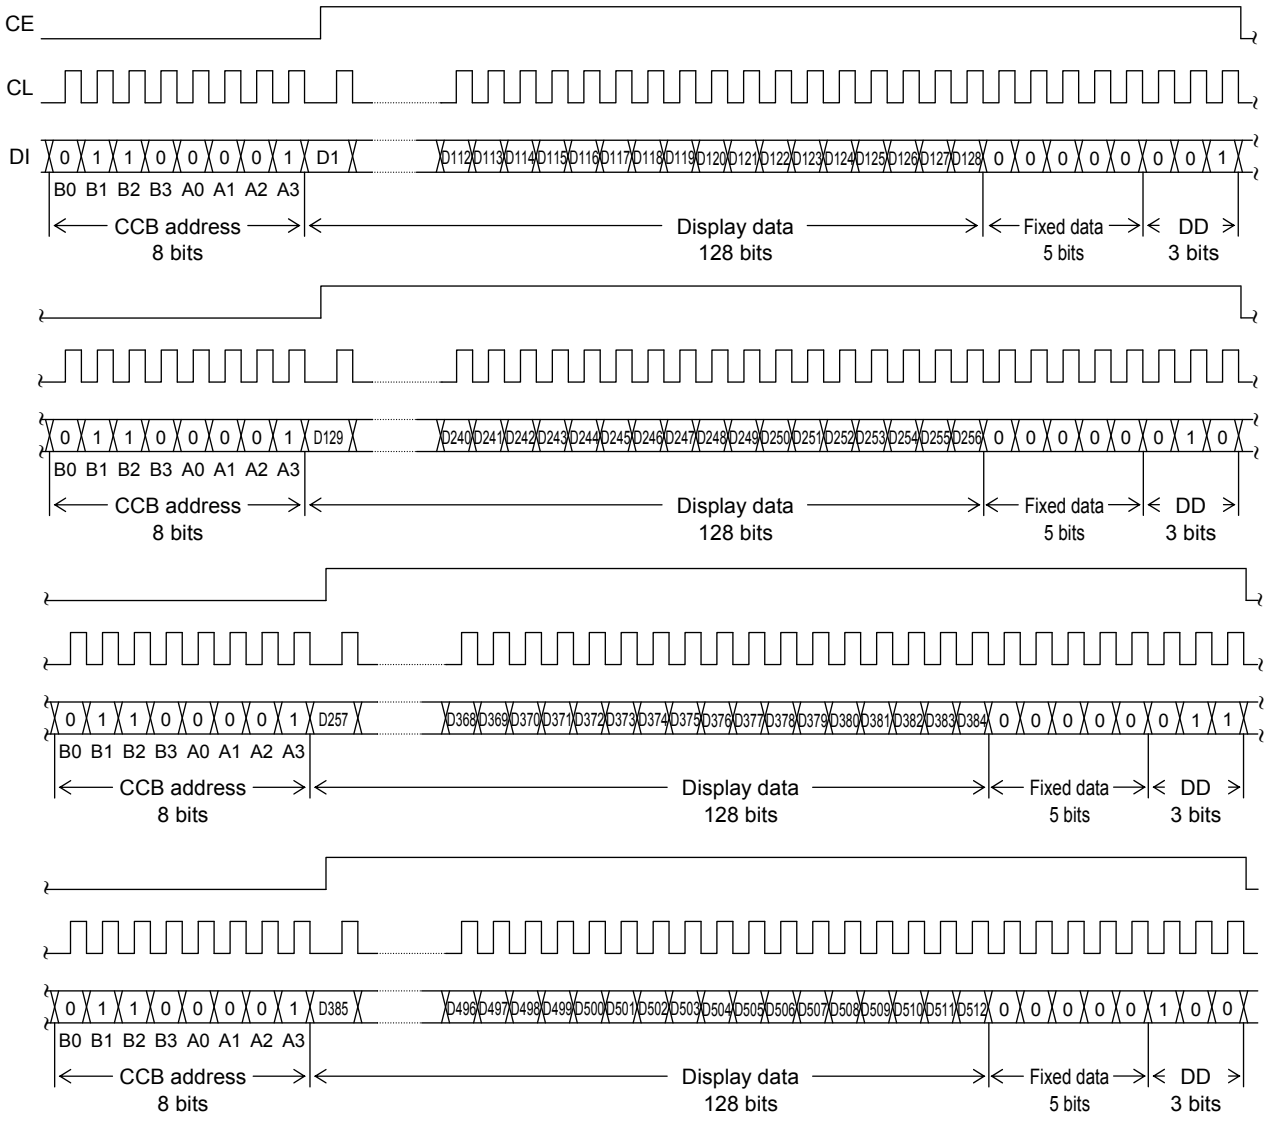
Note: DD is the direction data.

- CCB address ..... "86H"
- D1 to D387 ..... Display data
- W10 to W15, W20 to W25, W30 to W35
  ..... PWM data at PWM output ports
- PC1 to PC8 ..... General-purpose output port state setting control data
- PS10, PS11, PS20, PS21, PS30, PS31, PS40, PS41, PS5 to PS8
  ..... Segment output port/general-purpose output port/PWM output port/clock output port switching control data
- CT0 to CT2 ..... Display contrast setting control data
- DR ..... 1/2 bias drive or 1/3 bias drive switching control data
- DT ..... 1/3 duty drive or 1/4 duty drive switching control data
- OC ..... RC oscillator operating mode/external clock operating mode switching control data
- FC0 to FC2 ..... Common and segment output waveforms frame frequency setting control data
- PF0 to PF2 ..... PWM output waveforms frame frequency setting control data
- SC ..... Segments on/off control data
- BU ..... Normal mode/power-saving mode control data

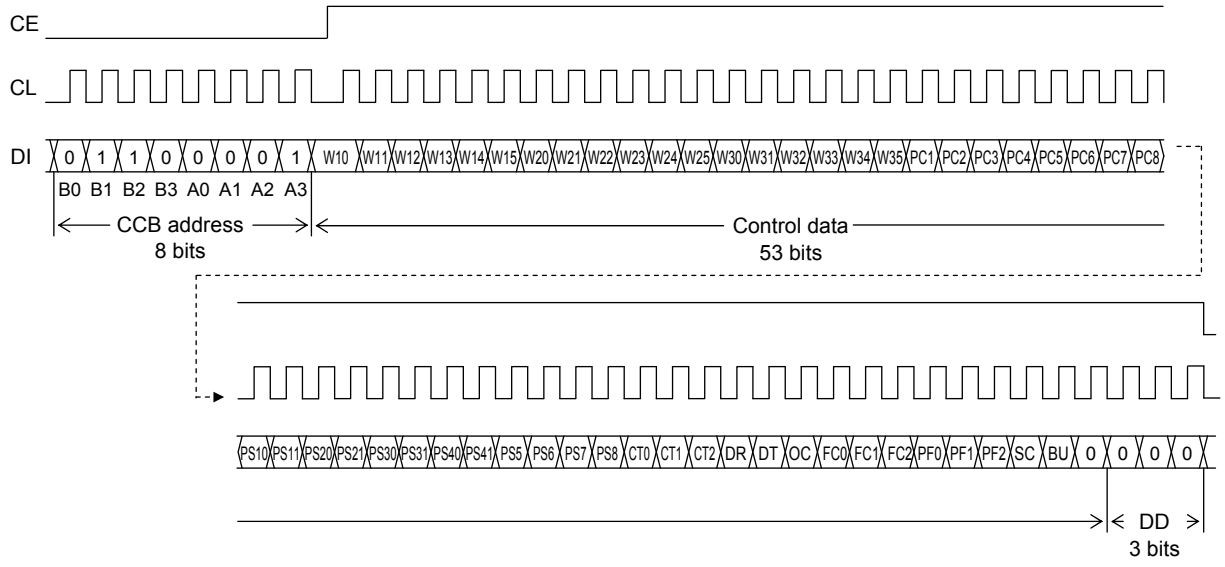
(2) 1/4 duty

1. When CL is stopped at the low level

- When the display data is transferred



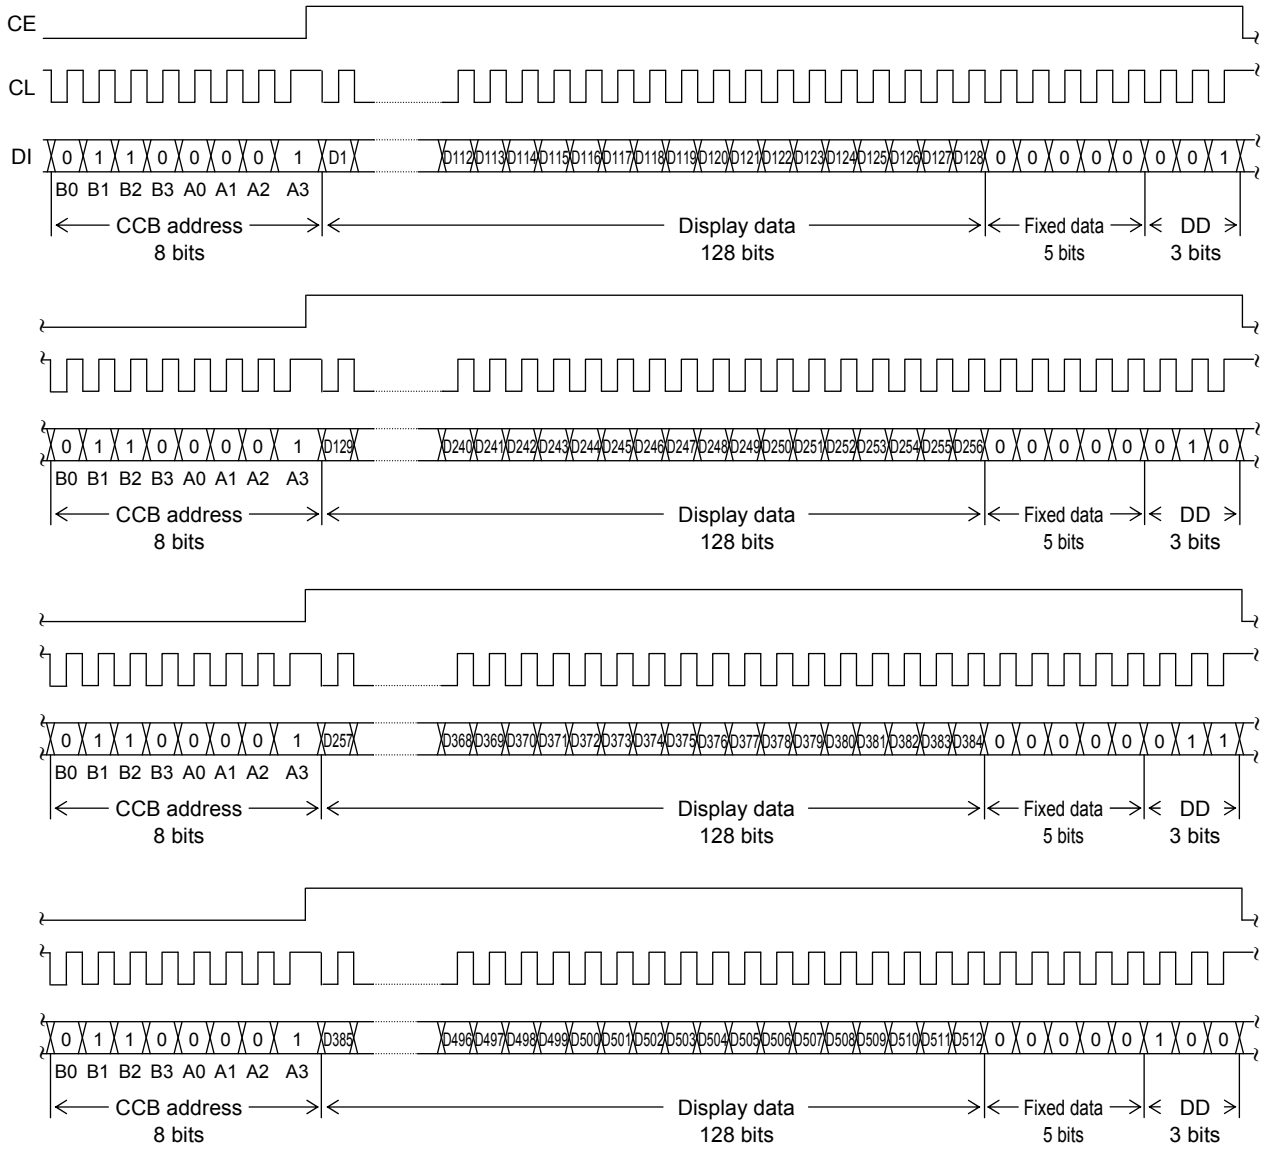
- When the control data is transferred



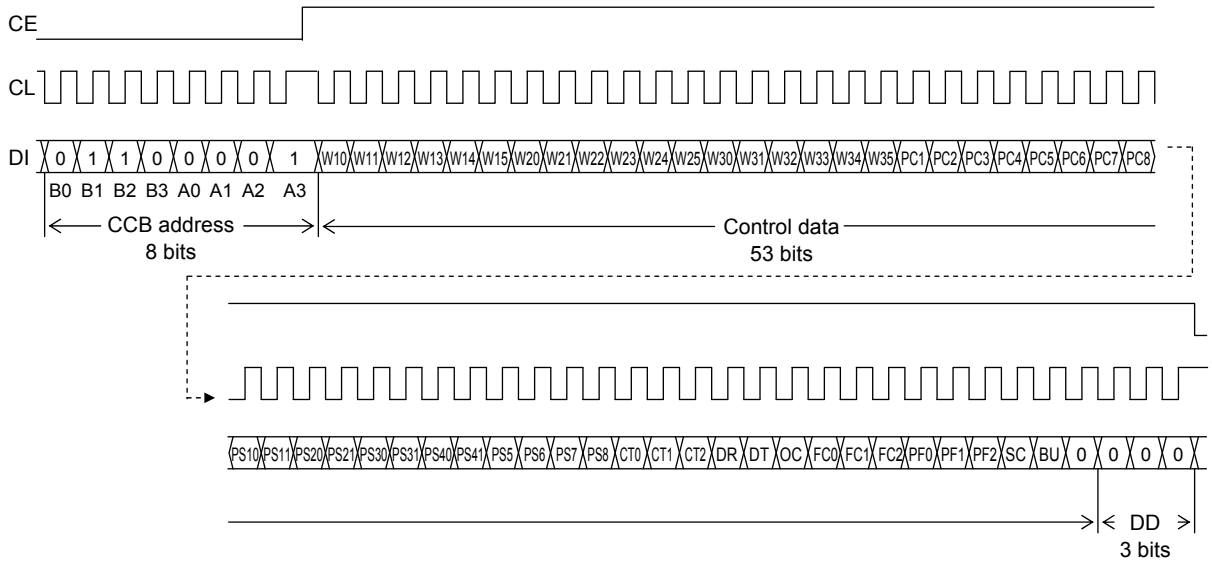
Note: DD is the direction data.

2. When CL is stopped at the high level

- When the display data is transferred



- When the control data is transferred



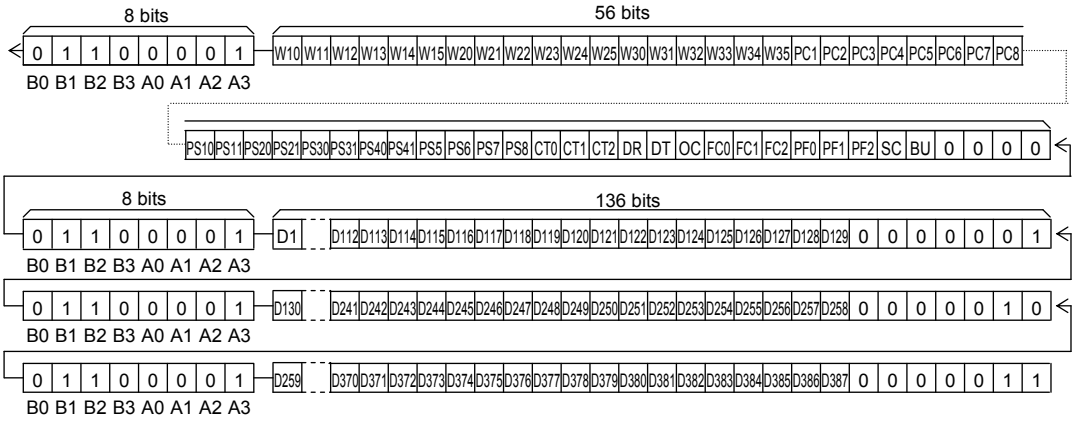
Note: DD is the direction data.

- CCB address ..... "86H"
- D1 to D512 ..... Display data
- W10 to W15, W20 to W25, W30 to W35
  ..... PWM data at PWM output ports
- PC1 to PC8 ..... General-purpose output port state setting control data
- PS10, PS11, PS20, PS21, PS30, PS31, PS40, PS41, PS5 to PS8
  ..... Segment output port/general-purpose output port/PWM output port/clock output port switching control data
- CT0 to CT2 ..... Display contrast setting control data
- DR ..... 1/2 bias drive or 1/3 bias drive switching control data
- DT ..... 1/3 duty drive or 1/4 duty drive switching control data
- OC ..... RC oscillator operating mode/external clock operating mode switching control data
- FC0 to FC2 ..... Common and segment output waveforms frame frequency setting control data
- PF0 to PF2 ..... PWM output waveforms frame frequency setting control data
- SC ..... Segments on/off control data
- BU ..... Normal mode/power-saving mode control data

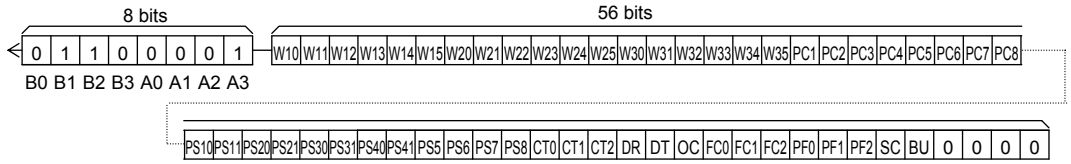
Serial Data Transfer Example

(1) 1/3 duty

- When 259 or more segments are used
  All 496 bits of serial data (including CCB addresses) must be sent.

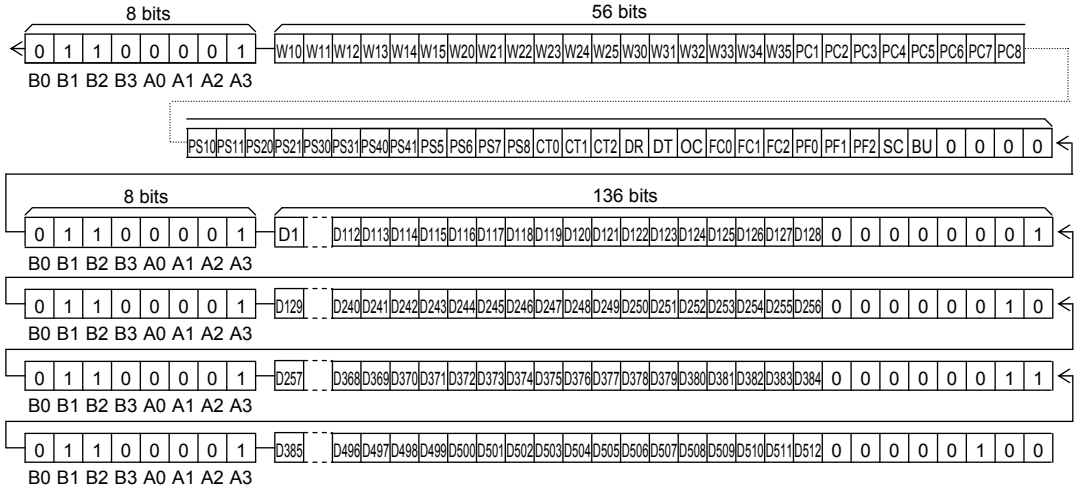


- When fewer than 259 segments are used
  Either 208 or 352 bits (including CCB addresses) of serial data may be sent, depending on the number of segments used. However, the serial data shown below (control data) must be sent.

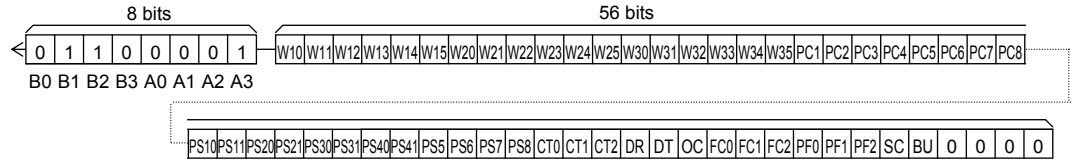


(2) 1/4 duty

- When 385 or more segments are used
  All 640 bits of serial data (including CCB addresses) must be sent.



- When fewer than 385 segments are used
  Either 208, 352 or 496 bits (including CCB addresses) of serial data may be sent, depending on the number of segments used. However, the serial data shown below (control data) must be sent.



Control Data Functions

(1) W10 to W15, W20 to W25, W30 to W35: PWM data at PWM output ports

This control data determines the pulse width of the PWM at PWM output ports P1/S1 to P3/S3.

Wn0	Wn1	Wn2	Wn3	Wn4	Wn5	Pulse width of PWM output port Pn
0	0	0	0	0	0	(1/64)×Tp

0	0	1	1	1	1	(61/64)×Tp
1	0	1	1	1	1	(62/64)×Tp
0	1	1	1	1	1	(63/64)×Tp
1	1	1	1	1	1	(64/64)×Tp

Note: Wn0 to Wn5 (n = 1 to 3): PWM data at output pins S1/P1 to S3/P3

$$Tp = \frac{1}{fp}$$

(2) PC1 to PC8: General-purpose output port state setting control data

This control data is used to set the high/low state of general-purpose output ports P1 to P8.

Output pins	P1	P2	P3	P4	P5	P6	P7	P8
Control data	PC1	PC2	PC3	PC4	PC5	PC6	PC7	PC8

Note: PCn = 1: The output pin Pn is set high (V_{LCD}) (n = 1 to 8).

PCn = 0: The output pin Pn is set low (V_{SS}) (n = 1 to 8).

For example, if output pins S4/P4 and S5/P5 are selected as general-purpose output ports, setting PC4 to 1 and PC5 to 0 causes the output pin P4 to be set high (V_{LCD}) and P5 to be set low (V_{SS}).

(3) PS10, PS11, PS20, PS21, PS30, PS31, PS40, PS41, PS5 to PS8: Segment output port/general-purpose output port/PWM output port/clock output port switching control data
This control data is used to set the state of output pins S1/P1 to S8/P8.

PS10 and PS11: Output pin (S1/P1) state settings

PS10	PS11	Output pin (S1/P1) state
0	0	Segment output port (S1)
1	0	General-purpose output port (P1)
0	1	PWM output port (P1)

PS20 and PS21: Output pin (S2/P2) state settings

PS20	PS21	Output pin (S2/P2) state
0	0	Segment output port (S2)
1	0	General-purpose output port (P2)
0	1	PWM output port (P2)

PS30 and PS31: Output pin (S3/P3) state settings

PS30	PS31	Output pin (S3/P3) state
0	0	Segment output port (S3)
1	0	General-purpose output port (P3)
0	1	PWM output port (P3)

PS40 and PS41: Output pin (S4/P4) state settings

PS40	PS41	Output pin (S4/P4) state
0	0	Segment output port (S4)
1	0	General-purpose output port (P4)
0	1	Clock output port (P4) (clock frequency fosc/2, f_{CK}/2)
1	1	Clock output port (P4) (clock frequency fosc/8, f_{CK}/8)

PS5: Output pin (S5/P5) state settings

PS5	Output pin (S5/P5) state
0	Segment output port (S5)
1	General-purpose output port (P5)

PS6: Output pin (S6/P6) state settings

PS6	Output pin (S6/P6) state
0	Segment output port (S6)
1	General-purpose output port (P6)

PS7: Output pin (S7/P7) state settings

PS7	Output pin (S7/P7) state
0	Segment output port (S7)
1	General-purpose output port (P7)

PS8: Output pin (S8/P8) state settings

PS8	Output pin (S8/P8) state
0	Segment output port (S8)
1	General-purpose output port (P8)

For example, if PS10 and PS11 are set to 0 and 1 respectively, PS20 and PS21 to 0 and 1 respectively, PS30 and PS31 to 0 and 1 respectively, PS40 and PS41 to 1 and 0 respectively, PS5 to 1, PS6 to 1, PS7 to 0, and PS8 to 0, the output pins S1/P1 to S3/P3 are selected as PWM output ports, the output pins S4/P4 to S6/P6 as general-purpose output ports, and the output pins S7/P7 and S8/P8 as segment output ports.

(4) CT0 to CT2: Display contrast setting control data
This control data is used to set the display contrast.

CT0 to CT2: Display contrast settings (7 steps)

CT0	CT1	CT2	Level of LCD drive bias 3/3 voltage power supply $V_{LCD}0$
0	0	0	$1.00V_{LCD} = V_{LCD} - (0.05V_{LCD} \times 0)$
1	0	0	$0.95V_{LCD} = V_{LCD} - (0.05V_{LCD} \times 1)$
0	1	0	$0.90V_{LCD} = V_{LCD} - (0.05V_{LCD} \times 2)$
1	1	0	$0.85V_{LCD} = V_{LCD} - (0.05V_{LCD} \times 3)$
0	0	1	$0.80V_{LCD} = V_{LCD} - (0.05V_{LCD} \times 4)$
1	0	1	$0.75V_{LCD} = V_{LCD} - (0.05V_{LCD} \times 5)$
0	1	1	$0.70V_{LCD} = V_{LCD} - (0.05V_{LCD} \times 6)$

Note that although the contrast of the display can be adjusted by running the internal display contrast adjustment circuit, it is also possible to adjust it by changing the voltage level on the LCD driver block power supply V_{LCD} pin. However, $V_{LCD}0$ must always be greater than or equal to 2.7V.

(5) DR: 1/2 bias drive or 1/3 bias drive switching control data
This control data bit selects either 1/2 bias drive or 1/3 bias drive.

DR	Bias drive scheme
0	1/3 bias drive
1	1/2 bias drive

(6) DT: 1/3 duty drive or 1/4 duty drive switching control data

This control data bit selects either 1/3 duty drive or 1/4 duty drive.

DT	Duty drive scheme	Output pin state (COM4/S129)
0	1/4 duty drive	COM4
1	1/3 duty drive	S129

Note: COM4: Common output
S129: Segment output

(7) OC: RC oscillator operating mode/external clock operating mode switching control data

This control data bit selects either RC oscillator operating mode or external clock operating mode.

OC	OSC pin function
0	RC oscillator operating mode
1	External clock operating mode

Note: When selecting the RC oscillator operating mode, be sure to connect an external resistor Rosc and an external capacitor Cosc to the OSC pin.

(8) FC0 to FC2: Common and segment output waveforms frame frequency setting control data

This control data bits set the frame frequency for the common and segment output waveforms.

Control data			Common/segment output waveform frame frequency fo [Hz]
FC0	FC1	FC2	
0	0	0	fosc/6144, f_{CK}/6144
1	0	0	fosc/4608, f_{CK}/4608
0	1	0	fosc/3072, f_{CK}/3072
1	1	0	fosc/2304, f_{CK}/2304
0	0	1	fosc/1536, f_{CK}/1536

(9) PF0 to PF2: PWM output waveforms frame frequency setting control data

This control data bits set the frame frequency for the PWM output waveforms.

Control data			PWM output waveform frame frequency fp [Hz]
PF0	PF1	PF2	
0	0	0	fosc/1536, f_{CK}/1536
1	0	0	fosc/1408, f_{CK}/1408
0	1	0	fosc/1280, f_{CK}/1280
1	1	0	fosc/1152, f_{CK}/1152
0	0	1	fosc/1024, f_{CK}/1024
1	0	1	fosc/896, f_{CK}/896
0	1	1	fosc/768, f_{CK}/768
1	1	1	fosc/640, f_{CK}/640

(10) SC: Segments on/off control data

This control data bit controls the on/off state of the segments.

SC	Display state
0	On
1	Off

However, note that the segments are turned off by setting SC to 1, the segments are turned off by outputing segment off waveforms from the segment output pins.

(11) BU: Normal mode/power-saving mode control data

This control data bit selects either normal mode or power-saving mode.

BU	Mode
0	Normal mode
1	Power save mode The LC75897PW stops the oscillation at the OSC pin if it is set up for the RC oscillator operating mode (OC = 0) and stops receiving the external clock if it is set up for the external clock operating mode (OC = 1). The IC also sets the common and segment output pins to the V_{SS} level. The output pins S1/P1 to S8/P8, however, remain available as general-purpose output ports as configured by control data bits PS10, PS11, PS20, PS21, PS30, PS31, PS40, PS41, and PS5 to PS8 (not available as PWM output or clock output ports).

Display Data to Segment Output Pin Correspondence

1. 1/3 duty

S128	D382	D383	D384
COM4/S129	D385	D386	D387

Note: This applies to the case where the S1/P1 to S8/P8, and COM4/S129 output pins are set to be segment output ports.

For example, the table below lists the segment output states for the S11 output pin.

Display data			Segment output pin (S11) state
D31	D32	D33	
0	0	0	The LCD segments corresponding to COM1, COM2, and COM3 are off.
0	0	1	The LCD segment corresponding to COM3 is on.
0	1	0	The LCD segment corresponding to COM2 is on.
0	1	1	The LCD segments corresponding to COM2 and COM3 are on.
1	0	0	The LCD segment corresponding to COM1 is on.
1	0	1	The LCD segments corresponding to COM1 and COM3 are on.
1	1	0	The LCD segments corresponding to COM1 and COM2 are on.
1	1	1	The LCD segments corresponding to COM1, COM2, and COM3 are on.

2. 1/4 duty

S127	D505	D506	D507	D508
S128	D509	D510	D511	D512

Note: This applies to the case where the S1/P1 to S8/P8 output pins are set to be segment output ports.

For example, the table below lists the segment output states for the S11 output pin.

Display data				Segment output pin (S11) state
D41	D42	D43	D44	
0	0	0	0	The LCD segments corresponding to COM1, COM2, COM3, and COM4 are off.
0	0	0	1	The LCD segment corresponding to COM4 is on.
0	0	1	0	The LCD segment corresponding to COM3 is on.
0	0	1	1	The LCD segments corresponding to COM3 and COM4 are on.
0	1	0	0	The LCD segment corresponding to COM2 is on.
0	1	0	1	The LCD segments corresponding to COM2 and COM4 are on.
0	1	1	0	The LCD segments corresponding to COM2 and COM3 are on.
0	1	1	1	The LCD segments corresponding to COM2, COM3, and COM4 are on.
1	0	0	0	The LCD segment corresponding to COM1 is on.
1	0	0	1	The LCD segments corresponding to COM1 and COM4 are on.
1	0	1	0	The LCD segments corresponding to COM1 and COM3 are on.
1	0	1	1	The LCD segments corresponding to COM1, COM3, and COM4 are on.
1	1	0	0	The LCD segments corresponding to COM1 and COM2 are on.
1	1	0	1	The LCD segments corresponding to COM1, COM2, and COM4 are on.
1	1	1	0	The LCD segments corresponding to COM1, COM2, and COM3 are on.
1	1	1	1	The LCD segments corresponding to COM1, COM2, COM3, and COM4 are on.

Output Waveforms (1/3-Duty 1/2-Bias Drive Scheme)

The $\overline{\text{INH}}$ pin and Display Control

Since the IC internal data (1/3 duty: the display data D1 to D387 and the control data, 1/4 duty: the display data D1 to D512 and the control data) is undefined when power is first applied, applications should set the $\overline{\text{INH}}$ pin low at the same time as power is applied to turn off the display (This sets the S1/P1 to S8/P8, S9 to S128, COM1 to COM3, and COM4/S129 to the V_{SS} level.) and during this period send serial data from the controller. The controller should then set the $\overline{\text{INH}}$ pin high after the data transfer has completed. This procedure prevents meaningless displays at power on. (See Figures 5 and 6.)

Notes on the Power On/Off Sequences

Applications should observe the following sequences when turning the LC75897PW power on and off.
(See Figures 5 and 6)

- At power on: Logic block power supply (V_{DD}) on → LCD driver block power supply (V_{LCD}) on
- At power off: LCD driver block power supply (V_{LCD}) off → Logic block power supply (V_{DD}) off

However, if the logic and LCD driver block use a shared power supply, then the power supplies can be turned on and off at the same time.

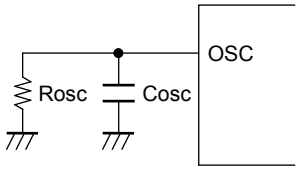
Notes on Controller Transfer of Display Data

Since the LC75897PW accepts the display data (D1 to D387) divided into three separate transfer operations when using 1/3 duty drive scheme and the data (D1 to D512) divided into four separate transfer operations when using 1/4 duty drive scheme, we recommend that applications transfer all of the display data within a period of less than 30ms to prevent observable degradation of display quality.

OSC pin peripheral circuits

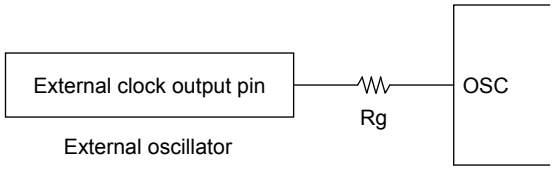
(1) RC oscillator operating mode (control data OC = 0)

When RC oscillator operating mode is selected, an external resistor Rosc and an external capacitor Cosc must be connected between the OSC pin and GND.



(2) External clock operating mode (control data OC = 1)

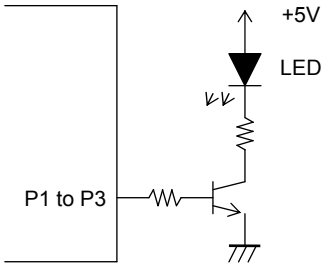
When selecting the external clock operating mode, connect a current protection resistor Rg (2.2 to 22 kΩ) between the OSC pin and the external clock output pin (external oscillator). Determine the value of the resistance according to the maximum allowable current value of the external clock output pin. Also make sure that the waveform of the external clock is not excessively distorted.



Note:
Allowable current value at external clock output pin > $\frac{V_{DD}}{Rg}$

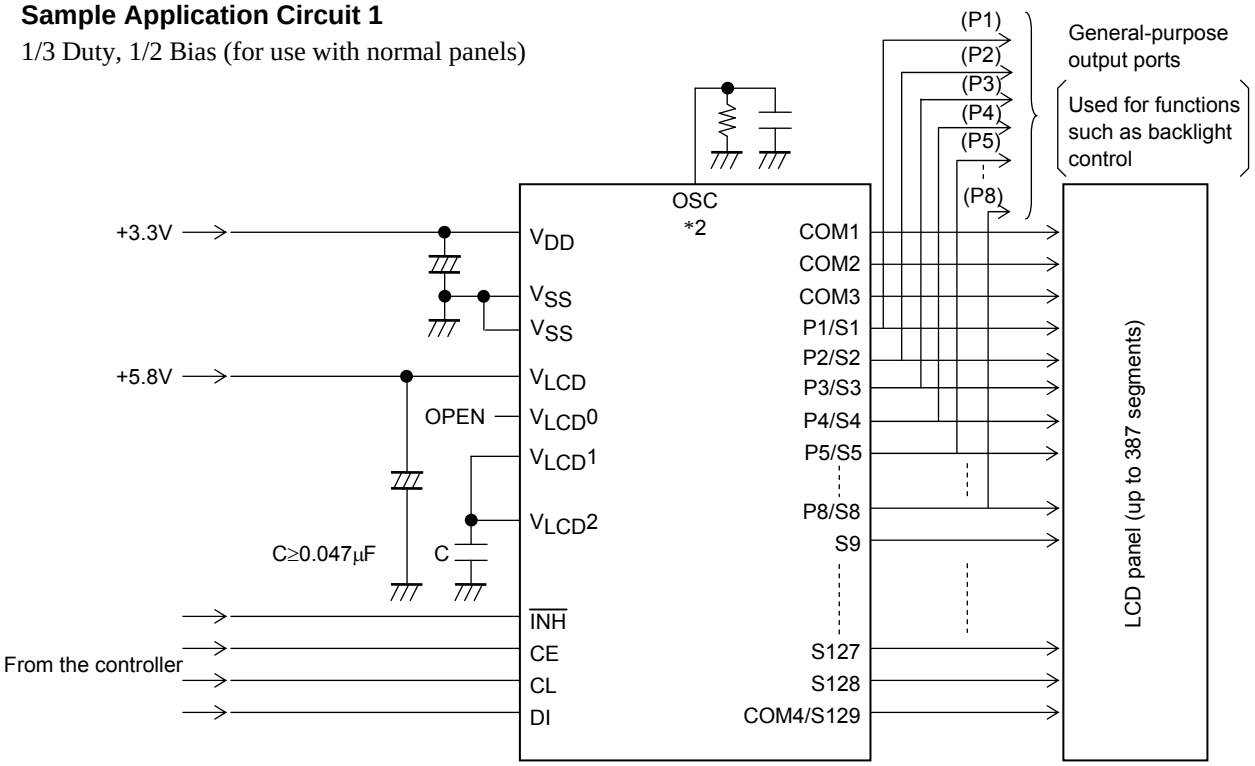
P1 to P3 pin peripheral circuit

It is recommended the circuit shown below be used to adjust the brightness of the LED backlight using PWM output ports P1 to P3.



Sample Application Circuit 1

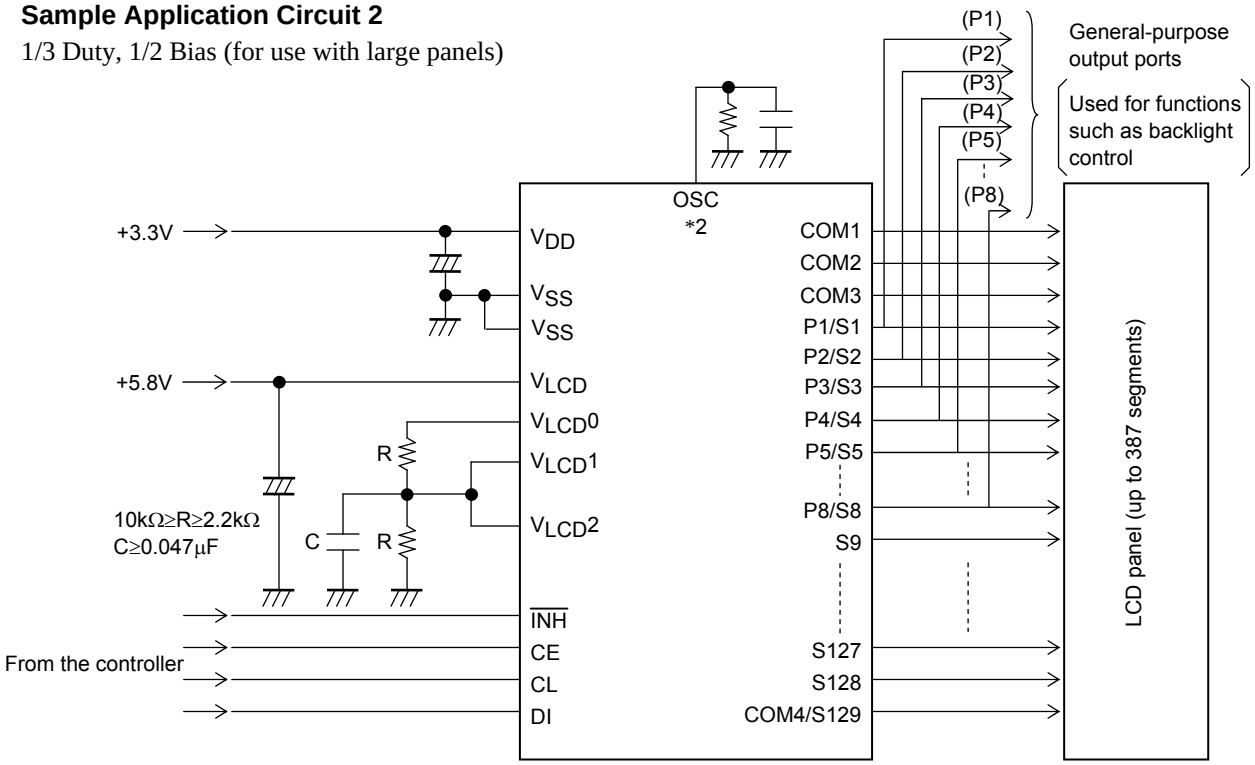
1/3 Duty, 1/2 Bias (for use with normal panels)



Note: *2 Connect an external resistor Rosc and an external capacitor Cosc between the OSC pin and GND when selecting the RC oscillator operating mode and connect a current protection resistor Rg (2.2 to 22 kΩ) between the OSC pin and the external clock output pin (external oscillator) when selecting the external clock operating mode (see the note on the OSC pin peripheral circuits).

Sample Application Circuit 2

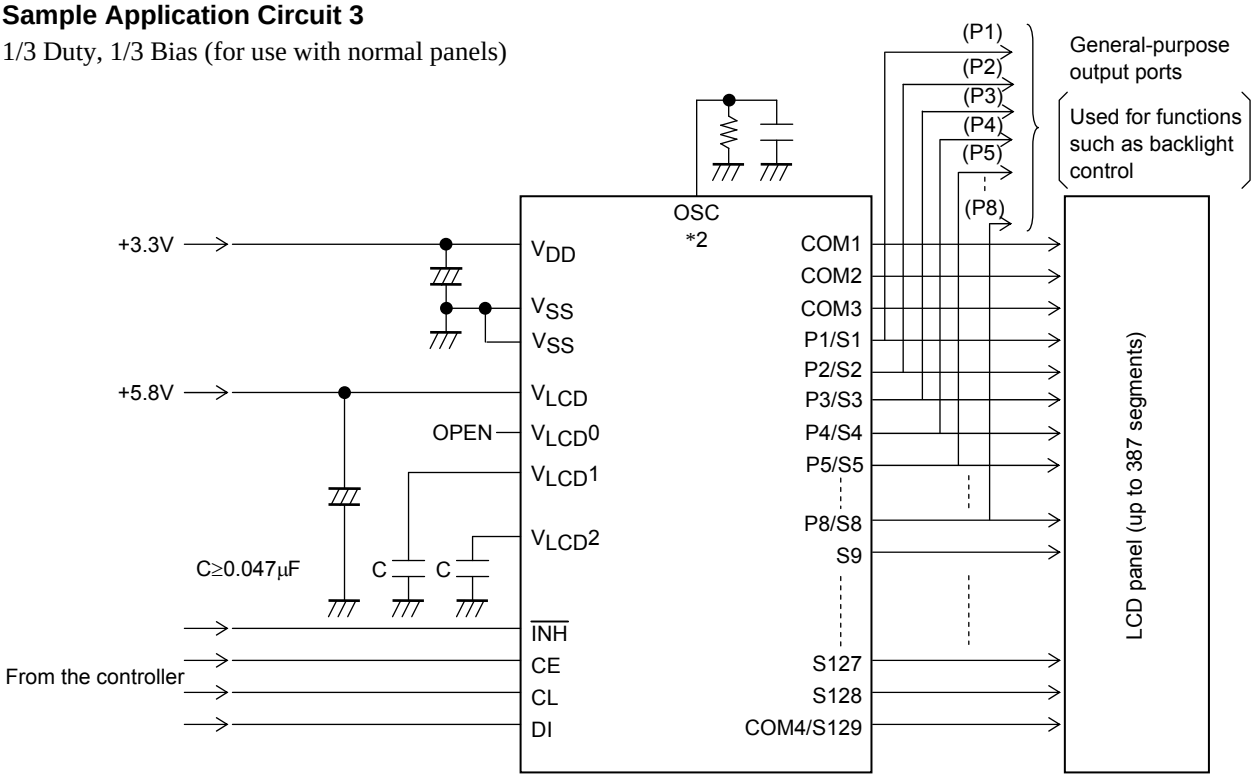
1/3 Duty, 1/2 Bias (for use with large panels)



Note: *2 Connect an external resistor Rosc and an external capacitor Cosc between the OSC pin and GND when selecting the RC oscillator operating mode and connect a current protection resistor Rg (2.2 to 22 kΩ) between the OSC pin and the external clock output pin (external oscillator) when selecting the external clock operating mode (see the note on the OSC pin peripheral circuits).

Sample Application Circuit 3

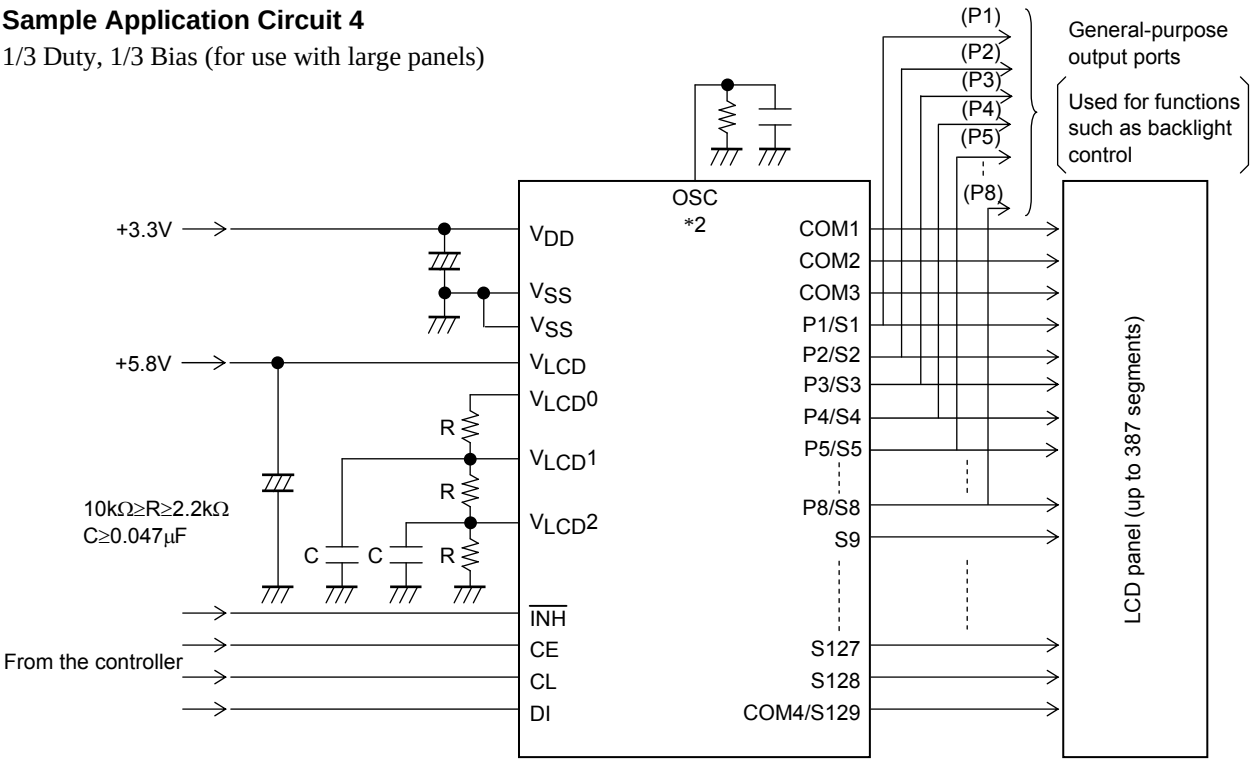
1/3 Duty, 1/3 Bias (for use with normal panels)



Note: *2 Connect an external resistor Rosc and an external capacitor Cosc between the OSC pin and GND when selecting the RC oscillator operating mode and connect a current protection resistor Rg (2.2 to 22 kΩ) between the OSC pin and the external clock output pin (external oscillator) when selecting the external clock operating mode (see the note on the OSC pin peripheral circuits).

Sample Application Circuit 4

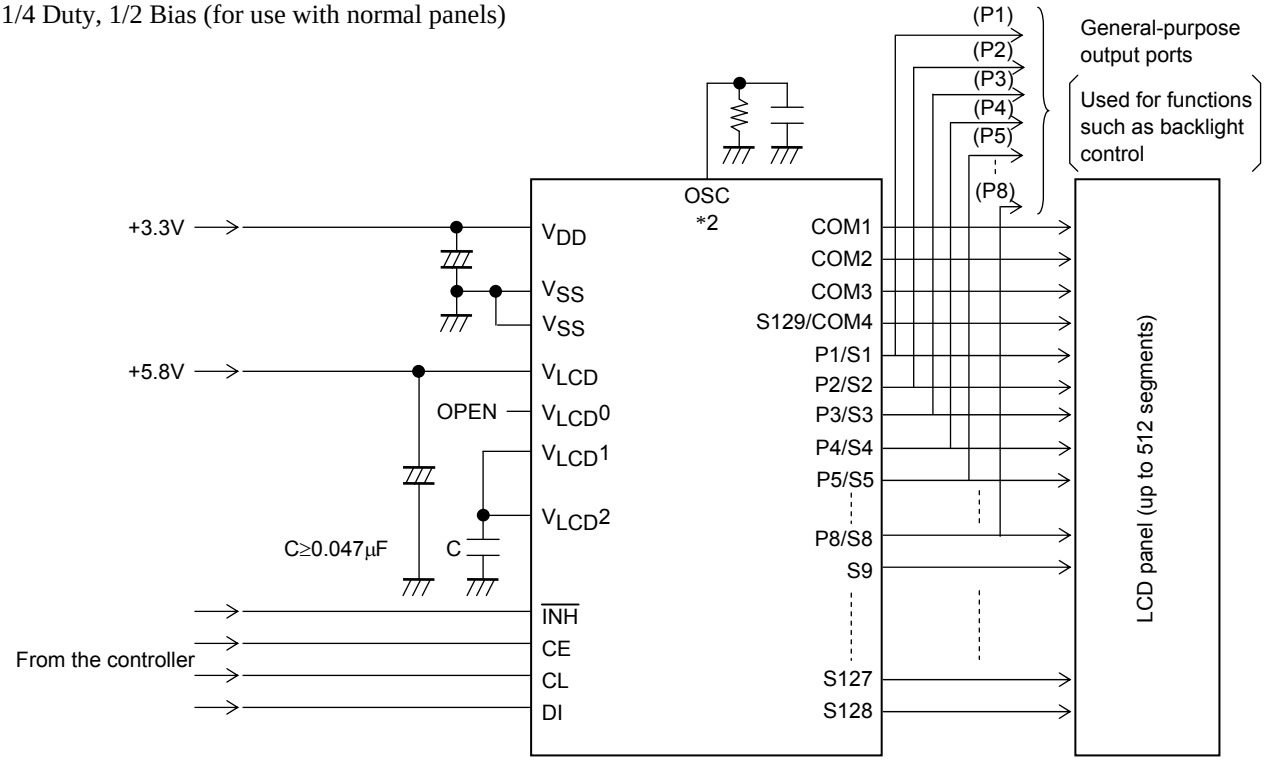
1/3 Duty, 1/3 Bias (for use with large panels)



Note: *2 Connect an external resistor Rosc and an external capacitor Cosc between the OSC pin and GND when selecting the RC oscillator operating mode and connect a current protection resistor Rg (2.2 to 22 kΩ) between the OSC pin and the external clock output pin (external oscillator) when selecting the external clock operating mode (see the note on the OSC pin peripheral circuits).

Sample Application Circuit 5

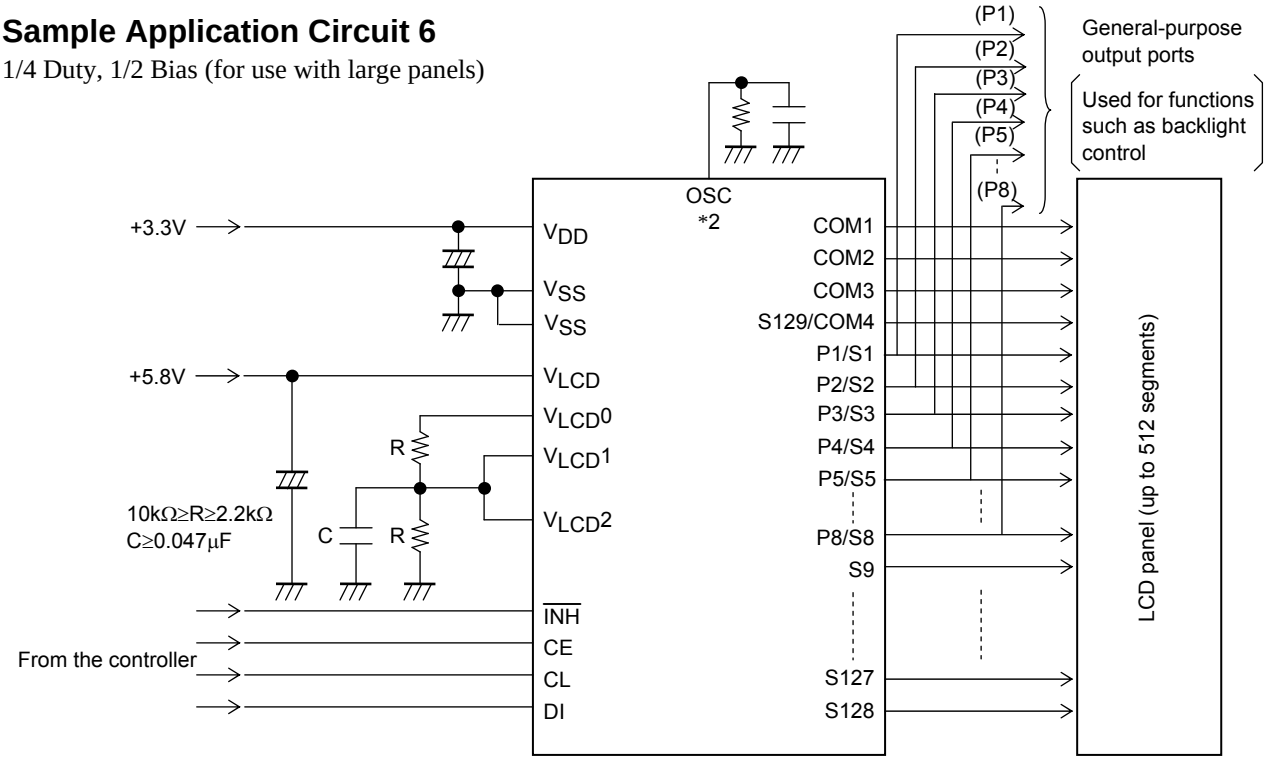
1/4 Duty, 1/2 Bias (for use with normal panels)



Note: *2 Connect an external resistor Rosc and an external capacitor Cosc between the OSC pin and GND when selecting the RC oscillator operating mode and connect a current protection resistor Rg (2.2 to 22 kΩ) between the OSC pin and the external clock output pin (external oscillator) when selecting the external clock operating mode (see the note on the OSC pin peripheral circuits).

Sample Application Circuit 6

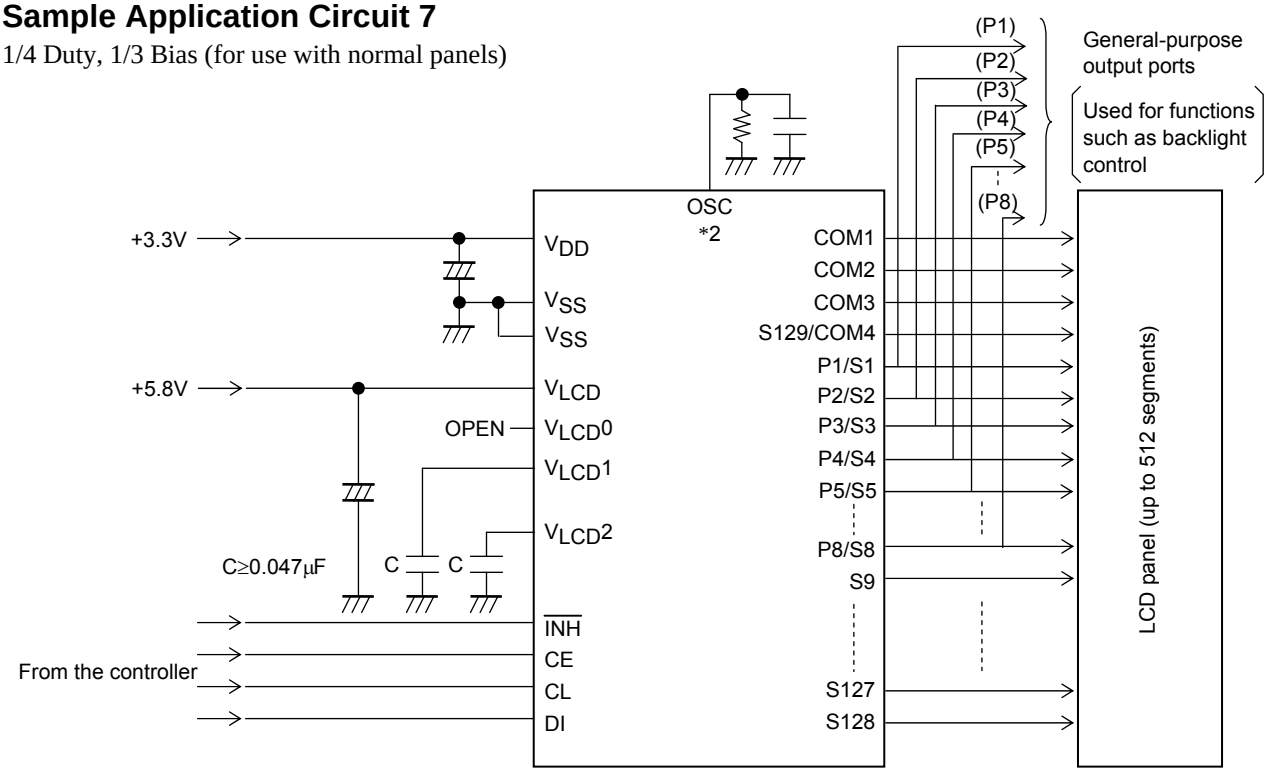
1/4 Duty, 1/2 Bias (for use with large panels)



Note: *2 Connect an external resistor Rosc and an external capacitor Cosc between the OSC pin and GND when selecting the RC oscillator operating mode and connect a current protection resistor Rg (2.2 to 22 kΩ) between the OSC pin and the external clock output pin (external oscillator) when selecting the external clock operating mode (see the note on the OSC pin peripheral circuits).

Sample Application Circuit 7

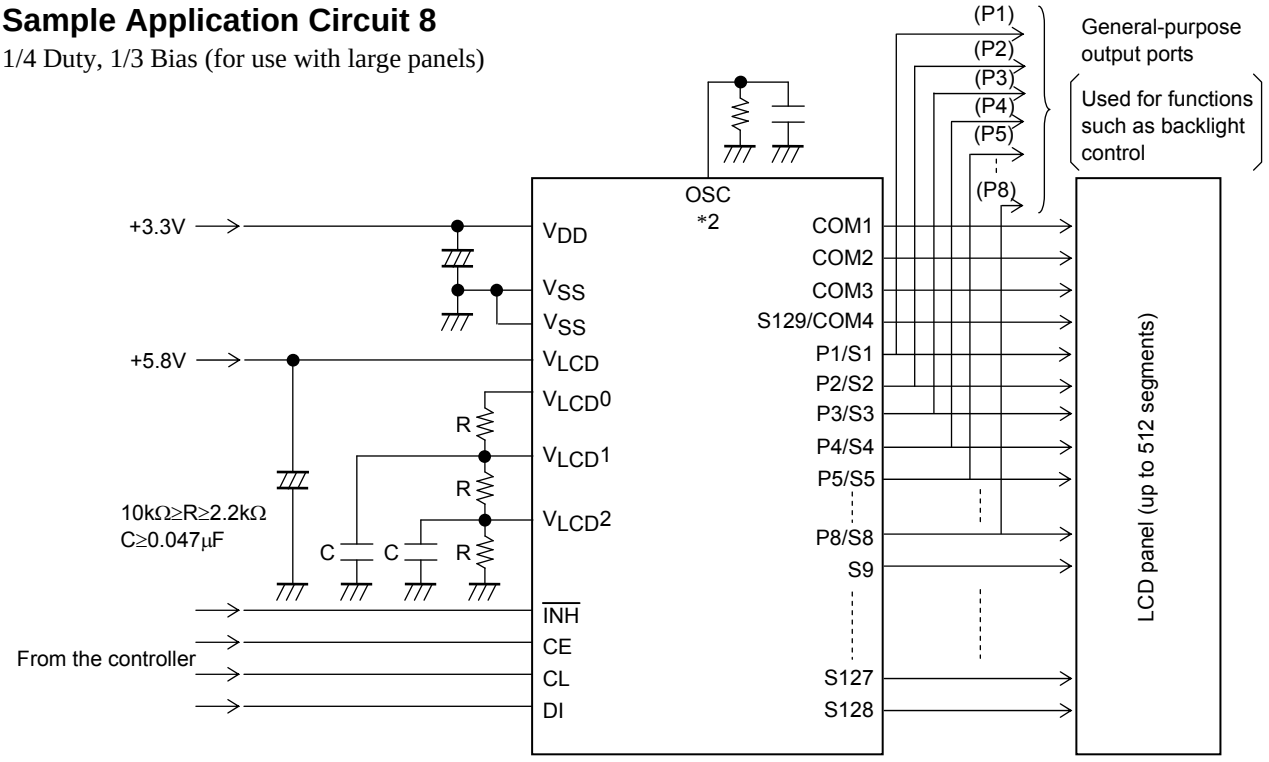
1/4 Duty, 1/3 Bias (for use with normal panels)



Note: *2 Connect an external resistor Rosc and an external capacitor Cosc between the OSC pin and GND when selecting the RC oscillator operating mode and connect a current protection resistor Rg (2.2 to 22 kΩ) between the OSC pin and the external clock output pin (external oscillator) when selecting the external clock operating mode (see the note on the OSC pin peripheral circuits).

Sample Application Circuit 8

1/4 Duty, 1/3 Bias (for use with large panels)



Note: *2 Connect an external resistor Rosc and an external capacitor Cosc between the OSC pin and GND when selecting the RC oscillator operating mode and connect a current protection resistor Rg (2.2 to 22 kΩ) between the OSC pin and the external clock output pin (external oscillator) when selecting the external clock operating mode (see the note on the OSC pin peripheral circuits).
