## MC14511B

## BCD-to-Seven Segment Latch/Decoder/Driver

The MC14511B BCD-to-seven segment latch/decoder/driver is constructed with complementary MOS (CMOS) enhancement mode devices and NPN bipolar output drivers in a single monolithic structure. The circuit provides the functions of a 4-bit storage latch, an 8421 BCD-to-seven segment decoder, and an output drive capability. Lamp test $(\overline{\mathrm{LT}})$, blanking ( $\overline{\mathrm{BI}})$, and latch enable (LE) inputs are used to test the display, to turn-off or pulse modulate the brightness of the display, and to store a BCD code, respectively. It can be used with seven-segment light-emitting diodes (LED), incandescent, fluorescent, gas discharge, or liquid crystal readouts either directly or indirectly.

Applications include instrument (e.g., counter, DVM, etc.) display driver, computer/calculator display driver, cockpit display driver, and various clock, watch, and timer uses.

## Features

- Low Logic Circuit Power Dissipation
- High-Current Sourcing Outputs (Up to 25 mA )
- Latch Storage of Code
- Blanking Input
- Lamp Test Provision
- Readout Blanking on all Illegal Input Combinations
- Lamp Intensity Modulation Capability
- Time Share (Multiplexing) Facility
- Supply Voltage Range = 3.0 V to 18 V
- Capable of Driving Two Low-power TTL Loads, One Low-power Schottky TTL Load, or Two HTL Loads Over the Rated Temperature Range
- Chip Complexity: 216 FETs or 54 Equivalent Gates
- Triple Diode Protection on all Inputs
- NLV Prefix for Automotive and Other Applications Requiring

Unique Site and Control Change Requirements; AEC-Q100 Qualified and PPAP Capable

- These Devices are $\mathrm{Pb}-$ Free and are RoHS Compliant

## ORDERING INFORMATION

See detailed ordering and shipping information in the package dimensions section on page 7 of this data sheet.

MAXIMUM RATINGS (Voltages Referenced to $\mathrm{V}_{\text {SS }}$ ) (Note 1)

| Symbol | Parameter | Value | Unit |
| :---: | :---: | :---: | :---: |
| $\mathrm{V}_{\mathrm{DD}}$ | DC Supply Voltage Range | -0.5 to +18.0 | V |
| $\mathrm{V}_{\text {in }}$ | Input Voltage Range, All Inputs | -0.5 to $\mathrm{V}_{\mathrm{DD}}+0.5$ | V |
| I | DC Current Drain per Input Pin | 10 | mA |
| $P_{D}$ | Power Dissipation, per Package (Note 2) | 500 | mW |
| $\mathrm{T}_{\text {A }}$ | Operating Temperature Range | -55 to +125 | ${ }^{\circ} \mathrm{C}$ |
| $\mathrm{T}_{\text {stg }}$ | Storage Temperature Range | -65 to +150 | ${ }^{\circ} \mathrm{C}$ |
| IOHmax | Maximum Output Drive Current (Source) per Output | 25 | mA |
| Pohmax | Maximum Continuous Output Power (Source) per Output (Note 3) | 50 | mA |

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

1. Maximum Ratings are those values beyond which damage to the device may occur.
2. Temperature Derating: "D/DW" Packages: $-7.0 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$ From $65^{\circ} \mathrm{C}$ to $125^{\circ} \mathrm{C}$
3. $\mathrm{P}_{\mathrm{OH} \max }=\mathrm{I}_{\mathrm{OH}}\left(\mathrm{V}_{\mathrm{DD}}-\mathrm{V}_{\mathrm{OH}}\right)$

## MC14511B

This device contains protection circuitry to protect the inputs against damage due to high static voltages or electric fields. However, it is advised that normal precautions be taken to avoid application of any voltage higher than maximum rated voltages to this high-impedance circuit. A destructive high current mode may occur if $V_{\text {in }}$ and $V_{\text {out }}$ are not constrained to the range $\mathrm{V}_{\mathrm{SS}} \leq\left(\mathrm{V}_{\text {in }}\right.$ or $\left.\mathrm{V}_{\text {out }}\right) \leq \mathrm{V}_{\mathrm{DD}}$.

Due to the sourcing capability of this circuit, damage can occur to the device if $\mathrm{V}_{\mathrm{DD}}$ is applied, and the outputs are shorted to $\mathrm{V}_{\mathrm{SS}}$ and are at a logical 1 (See Maximum Ratings).

Unused inputs must always be tied to an appropriate logic voltage level (e.g., either $\mathrm{V}_{\mathrm{SS}}$ or $\mathrm{V}_{\mathrm{DD}}$ ).

ELECTRICAL CHARACTERISTICS (Voltages Referenced to $\mathrm{V}_{\mathrm{SS}}$ )

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.
4. Noise immunity specified for worst-case input combination.

Noise Margin for both " 1 " and " 0 " level =

$$
1.0 \mathrm{Vdc} \min @ \mathrm{~V}_{\mathrm{DD}}=5.0 \mathrm{Vdc}
$$

$$
\text { 2.0 Vdc min @ VDD = } 10 \text { Vdc }
$$

$$
\text { 2.5 Vdc min @ } \mathrm{V}_{\mathrm{DD}}=15 \mathrm{Vdc}
$$

5. The formulas given are for the typical characteristics only at $25^{\circ} \mathrm{C}$.
6. To calculate total supply current at loads other than 50 pF :

$$
\mathrm{I}_{\mathrm{T}}\left(\mathrm{C}_{\mathrm{L}}\right)=\mathrm{I}_{\mathrm{T}}(50 \mathrm{pF})+3.5 \times 10^{-3}\left(\mathrm{C}_{\mathrm{L}}-50\right) \mathrm{V}_{\mathrm{DD}} f
$$

where: $I_{T}$ is in $\mu \mathrm{A}$ (per package), $\mathrm{C}_{\mathrm{L}}$ in $\mathrm{pF}, \mathrm{V}_{\mathrm{DD}}$ in Vdc , and f in kHz is input frequency.

## MC14511B
