

## Dual D-type flip-flop

Datasheet - production data

#### **Features**

- Set-reset capability
- Static flip-flop operation retains state indefinitely with clock level either "high" or "low"
- Medium speed operation 16 MHz (typ.), clock toggle rate at 10 V
- Standardized symmetrical output characteristics
- Quiescent current specified up to 20 V
- 5 V, 10 V, and 15 V parametric ratings
- Input leakage current  $I_I$  = 100 nA (max.) at  $V_{DD}$  = 18 V,  $T_A$  = 25  $^{\circ}$  C
- 100 % tested for quiescent current

This is information on a product in full production.

#### Description

The HCF4013 is a monolithic integrated circuit fabricated in metal oxide semiconductor technology available in PDIP14 and SO14 packages.

The HCF4013 consists of two identical, independent data type flip-flops. Each flip-flop has independent data, set, reset, and clock inputs, and Q and  $\overline{Q}$  outputs. This device can be used for shift register applications. It can also be used for counter and toggle applications by connecting  $\overline{Q}$  output to the data input.

The logic level present at the D input is transferred to the  $\overline{Q}$  output during the positivegoing transition of the clock pulse. Setting or resetting is independent of the clock and is accomplished by a high level on the set or reset line, respectively.
