

TEA6425

VIDEO CELLULAR MATRIX

- 6 Video Inputs - 8 Video Outputs
- 2 Internal Selectable YC Adders
- 15MHz Bandwidth @ -3dB
- Selectable 0.5/6.5dB Gain FOR EACH Output
- High Impedance Switch for each Output (3-state operation)
- Programmable Clamp Mode on each Input (sync bottom or average value)
- -60dB Crosstalk @ 5MHz
- 4 Sub-address Capability
- I²C Bus Control

DESCRIPTION

This device is intended for switching between video and chroma signals such as CVBS, SVHS, baseband CVBS, MAC. Each input clamp mode, each output gain, all switching are controlled through the I²C bus. The 8 outputs can be set separately in high impedance state, to enable parallel DC connection of several devices (up to 4).

FUNCTIONAL DESCRIPTION

This device is controlled via the I²C bus. 4 addresses can be selected by a 4-level detector on Pin 7, thus enabling parallel connection of 4 devices.

Via the I²C bus :

- The input signals can be clamped at their negative peak (top sync).
- The gain factor of the outputs can be selected between 0.5 and 6.5dB.

– Each of the 6 inputs can be connected to the 8 outputs.

– Each output can individually be set in a high impedance state.

Two internal SVHS mixers will add the selected Y and C inputs. Two dedicated outputs will have the option to select this added signal also.
