

Dual Output Low Dropout Regulator

DESCRIPTION

The SiP2214 is a dual output low dropout regulator capable of supplying 150 mA from output 1 and 300 mA from output 2. In addition to the LDOs, an open drain output has been included, which is capable of sinking 150 mA. The SiP2214 offers a low dropout, low ground current and extremely low noise with the addition of a bypass capacitor.

Protection features include POR with adjustable delay, undervoltage lockout, output current limit, and thermal shutdown.

The fixed output version of SiP2214 is available in the MLP33-10 PowerPAK package and the adjustable version is available in the MLP44-16 PowerPAK package. Both packages are specified to operate over the range of - 40 °C to 85 °C.

FEATURES

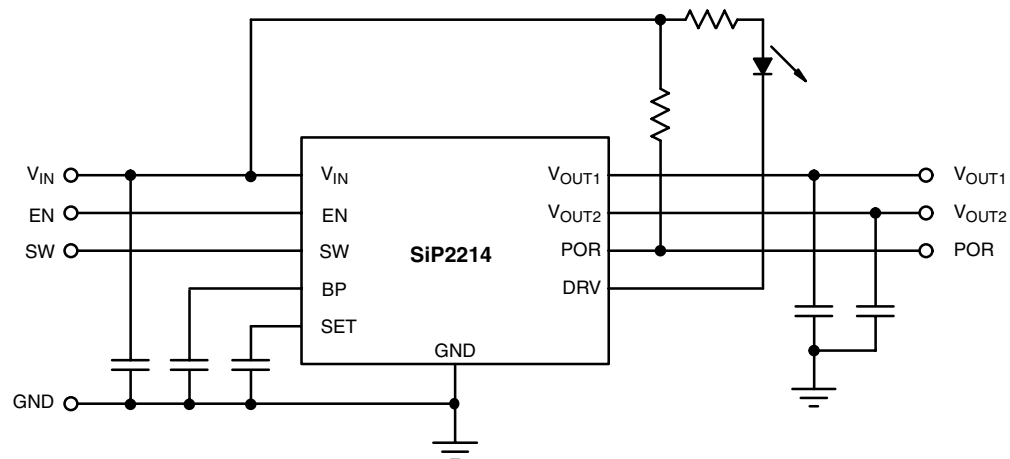

- 2.25 V to 5.5 V input voltage range
- Two outputs - 150 mA and 300 mA
- Low ground current
- Open drain driver output
- POR
- Current limit
- Thermal shutdown
- MLP33-10 and MLP44-16 PowerPAK[®] packages

APPLICATIONS

- Cellular phones
- Wireless modems
- PDAs

TYPICAL APPLICATION CIRCUIT

ABSOLUTE MAXIMUM RATINGS			
Parameter		Limit	Unit
V_{IN} , V_{EN} , to GND		- 0.3 to 7	V
Power Dissipation	MLP33-10 PowerPAK ^b	1600	mW
	MLP44-16 PowerPAK ^c	1880	
Storage Temperature		- 55 to 150	°C
Thermal Resistance	MLP33-10 PowerPAK ^a	50	°C/W
	MLP44-16 PowerPAK ^a	43	

Notes:

a. Device mounted with all leads soldered or welded to PC board.

b. Derate 20 mW/°C above 70 °C.

c. Derate 23.5 mW/°C above 70 °C.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

RECOMMENDED OPERATING RANGE			
Parameter		Limit	Unit
Input Voltage Range		2.25 to 5.5	V
Enable Voltage Range		0 to 5.5	
Operating Temperature Range T_A		- 40 to 85	°C
Operating Temperature Range T_J		- 40 to 125

		$V_{OUT2} = 0\ \text{V}$	Room	300	450	700	
Thermal Shutdown Temperature			Room		165		$^\circ\text{C}$
Thermal Hysteresis			Room		25		

Notes:

- a. Room = 25 °C, Full = - 40 °C to 85 °C.
- b. The algebraic convention whereby the most negative value is a minimum and the most positive a maximum.
- c. Typical values are for DESIGN AID ONLY, not guaranteed nor subject to production testing.
- d. Timing is measured from 90 % of LDO #1's final value to 90 % of LDO #2's final value.
- e. Guaranteed by design.
- f. For higher output of the regulator pair.
- g. Dropout voltage is defined as the input to output differential voltage at which the output voltage drops 2 % below the output voltage measured with a 1 V differential, provided that V_{IN} does not drop below 2.25 V. When $V_{OUT(nom)}$ is less than 2.25 V, the output will be in regulation when $2.25\ \text{V} - V_{OUT(nom)}$ is greater than the dropout voltage specified.

Z: Output 2 voltage code.

PIN DESCRIPTION			
Pin Number		Name	Function
MLP33-10	MLP44-16		
1	15, 16	V _{IN}	Input voltage for the power MOSFETs and their gate drive
2		EN	Enables both LDO outputs
	1	EN ₁	Enable LDO #1
	2	EN ₂	Enable LDO #2
3	3	BP	Bypass for noise reduction
4	5	SW	Control for open drain output
	4	ADJ ₁	Feedback connection for LDO #1
5	6	SET	Connection for external capacitor to delay POR
6	7, 8	GND	Ground
	9	GND _{SW}	Ground for the internal N-channel MOSFET switch
	10	ADJ ₂	Feedback connection for LDO #2
7	11	DRV	Open drain output
8	12	POR	Power on reset output
9	13	V _{OUT2}	Output of LDO #2 - 300 mA
10	14	V _{OUT1}	Output of LDO #1 - 150 mA

The exposed pad on both packages must be connected externally to the GND pin.

DETAILED OPERATION

The SiP2214 is a low drop out, low quiescent current monolithic dual linear regulator, with power-on reset and open drain driver output features. With output voltage range from 1.25 V to 5 V the first regulator can source 150 mA and the second regulator can source 300 mA. The open drain driver has the capability to drive LED's for backlighting applications.

V_{IN}

V_{IN} is the input supply pin for both LDO's. The bypass capacitor for this pin is not critical as long as the input supply has low enough source impedance. For practical circuits, a 1.0 μ F or larger ceramic capacitor is recommended. When the source impedance is not low enough and/or the source is several inches from the SiP2214, then a larger input bypass capacitor is needed. When the source impedance, wire and trace impedance are unknown, it is recommended that an input bypass capacitor be used of a value that is equal to or greater than the output capacitor.

$V_{OUT1,2}$ (LDO Outputs)

The V_{OUT} is the output voltage of the regulator. Connect a bypass capacitor from V_{OUTx} to ground. The output capacitor can be any value from 1.0 μ F to 10.0 μ F. A ceramic capacitor with X5R or X7R dielectric type is recommended for best output noise, line transient, and load transient performance.

Enable

The Enable pin controls the turning on and off of both regulators of the SiP2214. V_{OUT} of both outputs are guaranteed to be on when the Enable pin voltage is equal or greater than 1.8 V. V_{OUT} is guaranteed to be off when the

Enable pin voltage equals or is less than 0.6 V. To automatically turn on V_{OUT} whenever the Input is applied, tie the Enable pin to V_{IN} .

For the adjustable voltage version of the SiP2214, LDO₁ and LDO₂, have separate and independent Enable control pins.

Power-On Reset (POR)

The POR is an open drain output that goes low when V_{OUT2} is less than 5 % of its nominal value. As with any open drain output, an external pull up resistor is needed. The POR pin is disconnected if not used.

SET

When a capacitor is connected from SET to GROUND, the POR signal transition from low to high is delayed. This delayed POR signal can be used as the power-on reset signal for the application system. To set the POR delay time refer to the POR Delay curve to determine the capacitor value.

The Set pin should be an open circuit if not used.

OPEN-Drain Driver (DRV)

The SW pin a logic level input put that controls the DRV pin. The switch pin is an active high input and should not be left floating. The drive pin is an open drain output able to sink 150 mA of current.

Bypass Capacitor

For low noise application and/or increase in power supply rejection ration (PSRR) connect a high frequency ceramic capacitor from BP to ground. A 0.01 μ F X5R or X7R ceramic capacitor is recommended.
