## Audio Jack Detector with Send / End Detect

## DESCRIPTION

The DG2592 is an audio jack detector and pop noise control switch IC. It integrates the circuits necessary to detect the presence of a stereo headset with a microphone and send / end control button.
When there is no ear phone detected, the DG2592 connects the microphone bias line to ground through the MIC pin. The DG2592 also gives a logic high signal to the baseband controller through the DET pin.
The DG2592 senses the DC levels at both L_Detect and GND_Detect. When an ear phone is plugged in, the voltage at both pins will go low. The DG2592 will indicate the presence of the ear phone by pulling DET low and the MIC switch will turn off.
The DG2592 is available in small miniQFN10 of $1.4 \mathrm{~mm} \times 1.8 \mathrm{~mm} \times 0.55 \mathrm{~mm}$ and ultra thin UTMQFN10 of 0.35 mm thickness.

## FEATURES

- Wide operating voltage range: 1.6 V to 5.5 V
- Low quiescent current of $10 \mu \mathrm{~A}$, max. at $V_{D D}=1.8 \mathrm{~V}$
- Integrated sense comparator for audio $L$ of $1.4 \mathrm{~V} \pm 5$ \% threshold

RoHS complant halogen FREE

- $1.2 \Omega /$ max. MIC bias switch provides quick discharge and clamping
- ESD Protected
- Human body model > 8 kV
- Charged device model $>2 \mathrm{kV}$
- IEC 61000-4-2 air discharge > 15 kV
- IEC 61000-4-2 contact discharge $>8 \mathrm{kV}$
- Ultra thin and compact miniQFN10 and UTDFN10
- Material categorization: for definitions of compliance please see www.vishay.com/doc?99912

## APPLICATIONS

- Cellular phones
- Tablet devices
- Portable media players
- Digital cameras

Fig. 1 - Typical Application Circuit

## PIN DESCRIPTION

| PIN\# | NAME | TYPE | FUNCTION |
| :---: | :---: | :---: | :--- |
| 1 | GND | Power | Ground |
| 2 | MIC | Output | Microphone bias switch input |
| 3 | V | Power | Power supply for ear jack plug in detection circuit. A bypass capacitor of <br> $0.1 \mu$ is recommended as close as possible to this pin |
| 4 | L_DET | Input | Connected to L_DET pin at audio jack |
| 5 | GND_DET | Input | Connect to GND_DET pin at audio jack |
| 6 | DET | Output | Detect logic output connected to baseband controller |
| 7 | S/E | Output | S/E detect comparator output |
| 8 | S/E_DET | Input | Non-inverting input of S/E press detection comparator |
| 9 | S/E_REF | Input | Inverting input of S/E press detection comparator. External voltage is <br> provided as press detection reference threshold |
| 10 | VDD2 | Power | Power supply pin for the S/E detection circuit. A bypass capacitor of $0.1 ~$ <br> is |

| MIC Bias Voltage |  |  | 0 to 5.5 | V |
| Operating Junction Temperature |  |  | -40 to +125 | ${ }^{\circ} \mathrm{C}$ |

## Note

- The control logic pins should not float and should be set to either high or low logic levels.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
