5. For a device surface mounted on 25mm x 25mm x 1.6mm FR-4 PCB with high coverage of single sided 1oz copper, in still air conditions; the device is measured when operating in a steady-state condition.
 6. Same as note (5), except the device is measured at t ≤ 10 sec.
 7. Same as note (5), except the device is pulsed with D = 0.02 and pulse width 300µs. The pulse current is limited by the maximum junction temperature.
 8. For a dual device with one active die.
 9. For a device with two active die running at equal power.
 10. Thermal resistance from junction to solder-point (at the end of the drain lead); the device is operating in a steady-state condition.
 11. I_{AS} rating is based on low frequency and duty cycles to keep T_J = +25°C.
