A Product Line of
Diodes Incorporated

PERICOM

Features

→ Highly Accurate: ±1.5% (25°C)
→ Detect Voltage Range: 1.8V to 5V in 100mV Increments
→ Operating Voltage Range: 1.0V ~ 5.5V
→ Operating Temperature Range: -40°C to + 85°C
→ Detect Voltage Temperature Characteristics: ±2.5% × TYP
→ Output Configuration: N-Channel Open Drain
→ Totally Lead-Free & Fully RoHS Compliant (Notes 1 & 2)
→ Halogen and Antimony Free. "Green" Device (Note 3)
→ Three Reset Timeout Period Available:
   ◆ Typical 1.6ms for PT7M6315USxxD1;
   ◆ Typical 26ms for PT7M6315USxxD2;
   ◆ Typical 200ms for PT7M6315USxxD3;
   ◆ Typical 1570ms for PT7M6315USxxD4;
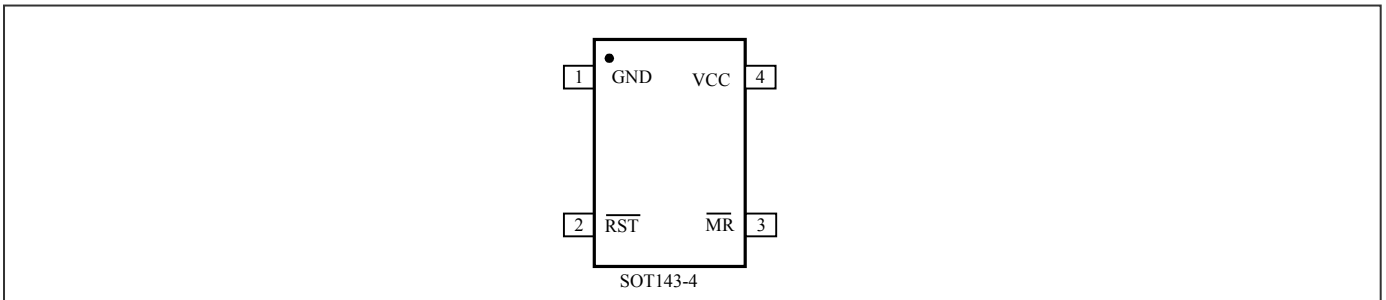

Description

The series is designed to monitor power supplies in μP and digital systems. It provides excellent circuit reliability and low cost by eliminating external components and adjustments, and a debounced manual reset input.

This device performs a single function: it asserts a reset signal whenever the V_{CC} supply voltage falls below a preset threshold or whenever manual reset is asserted. Reset remains asserted for an internally programmed interval (reset timeout period) after V_{CC} has risen above the reset threshold or manual reset is deasserted.

The PT7M6315USxx devices are open-drain RESET output. They can be pulled up to a voltage higher than V_{CC}.

The serials come with factory-trimmed, reset threshold voltages in 100mV increments from 1.8V to 5V. Preset timeout periods of 200ms (typ.) for PT7M6315USxxD3, 1570ms (typ.) for PT7M6315USxxD4, and 26ms for PT7M6315USxxD2 are available.

Pin Configuration

SOT143-4

Pin Description

Name	Type	Description
$\overline{RST}$	I/O	**Reset Output:** $\overline{RST}$ is asserted when V_{CC} drops below voltage threshold V_{TH-}. Active low.
$\overline{MR}$	I	**Manual Reset:** A logic low on $\overline{MR}$ asserts reset. Reset remains asserted as long as $\overline{MR}$ is low, and for the reset timeout period (t_{RS}) after the reset conditions are terminated. Connect to V_{CC} if not used.
GND	P	**Ground**
V_{CC}	P	**Supply Voltage.**

Notes:
1. No purposely added lead. Fully EU Directive 2002/95/EC (RoHS), 2011/65/EU (RoHS 2) & 2015/863/EU (RoHS 3) compliant.
2. See https://www.diodes.com/quality/lead-free/ for more information about Diodes Incorporated's definitions of Halogen- and Antimony-free, "Green" and Lead-free.
3. Halogen- and Antimony-free "Green" products are defined as those which contain <900ppm bromine, <900ppm chlorine (<1500ppm total Br + Cl) and <1000ppm antimony compounds.

Block Diagram
Function Description

Power Monitor

A microprocessor's (μP) reset input starts the μP in a known state. Whenever the μP is in an unknown state, it should be held in reset. The supervisory circuits assert reset during power-up and prevent code execution errors during power down or brownout conditions.

On power up, once Vcc reaches about 1.0V, $\overline{RST}$ is a guaranteed logic low of 0.4V or less. As Vcc rises, $\overline{RST}$ stays low. When Vcc rises above the reset threshold V_{RST}, an internal timer releases $\overline{RST}$ after about 200ms (PT7M6315USxxD3) or 1570ms (PT7M6315USxxD4) or 26ms (PT7M6315USxxD2) or 1.6ms (PT7M6315USxxD1). $\overline{RST}$ asserts whenever Vcc drops below the reset threshold, i.e. brownout condition. If brownout occurs in the middle of a previously initiated reset pulse, the pulse continues for at least another 200ms (PT7M6315USxxD3) or 1570ms (PT7M6315USxxD4) or 26ms (PT7M6315USxxD2) or 1.6ms (PT7M6315USxxD1). On power down, once Vcc falls below the reset threshold, $\overline{RST}$ stays low and is guaranteed to be 0.4V or less until Vcc drops below 1V.

Manual Reset

The manual-reset input ($\overline{MR}$) allows reset to be triggered by a push button switch. The switch is effectively debounced by the 1.6ms (PT7M6315USxxD1) or 26ms (PT7M6315USxxD2) or 200ms (PT7M6315USxxD3) or 1570ms (PT7M6315USxxD4) reset pulse width.

Maximum Ratings

Storage Temperature ....-65ºC to +150ºC
Ambient Temperature with Power Applied .... -40ºC to +85ºC
Supply Voltage to Ground Potential (Vcc to GND) ....-0.3V to +7.0V
DC Input Voltage (All inputs except Vcc and GND)......-0.3V to V_{CC}+0.3V
DC Output Current (All outputs) 30mA
Power Dissipation .... 320mW (Depends on package)

Note:
Stresses greater than those listed under MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

DC Electrical Characteristics

(T_A= -40~85ºC, unless otherwise noted. Typical values are at T_A = +25ºC)

Description		Sym.	Test Conditions		Min	Typ	Max	Unit
Supply Voltage		V_{CC}	—		1.0	—	5.5	V
Supply Current		I_{CC}	V_{CC} = 5.5V. No load.		—	—	12	μA
			V_{CC} = 3.6V. No load.		—	—	10	μA
Voltage Threshold		V_{TH-}	+25°C		(V_{TH-}) ×0.985	V_{TH-}	(V_{TH-}) ×1.015	V
			-40°C~85°C		(V_{TH-}) ×0.975	V_{TH-}	(V_{TH-}) ×1.025	—
Hysteresis		V_{HYS}	V_{TH+} - V_{TH-}*		—	50	—	mV
Output Driving	Output Low	V_{OL}	I_{OH} = 8mA, V_{CC} = 5V		—	—	0.4	V
			I_{OH} = 4mA, V_{CC} = 3V		—	—	0.3	
			I_{OH} = -50μA, V_{CC} = 1V		—	—	0.09	
Open-Drain Output Leakage Current		I_{LKG}	—		—	—	500	nA
Internal Pull-Up Resistor		R_P	$\overline{MR}$		32	63	100	kΩ
Input High Voltage		V_{IH}	$\overline{MR}$	V_{CC} < 4V	0.7×Vcc	—	—	V
				V_{CC} > 4V	2.4	—	—	
Input Low Voltage		V_{IL}	$\overline{MR}$	V_{CC} < 4V	—	—	0.3×Vcc	V
				V_{CC} > 4V	—	—	0.8	

Note: V_{TH-} is voltage threshold when V_{CC} falls from high to low. V_{TH+} is voltage threshold when V_{CC} rises from low to high.

LIFE SUPPORT

Diodes Incorporated products are specifically not authorized for use as critical components in life support devices or systems without the express written approval of the Chief Executive Officer of Diodes Incorporated. As used herein:

A.   Life support devices or systems are devices or systems which:
    1. are intended to implant into the body, or
2. support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in significant injury to the user.
B.   A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or to affect its safety or effectiveness.

Customers represent that they have all necessary expertise in the safety and regulatory ramifications of their life support devices or systems, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of Diodes Incorporated products in such safety-critical, life support devices or systems, notwithstanding any devices- or systems-related information or support that may be provided by Diodes Incorporated. Further, Customers must fully indemnify Diodes Incorporated and its representatives against any damages arising out of the use of Diodes Incorporated products in such safety-critical, life support devices or systems.
