PI3HDX412BD

HDMI 1.4B 1:2 Active Splitter/Demux for 3.4Gbps Data Rate with Equalization and Pre-emphasis

Description

PI3HDX412BD, active-drive switch solution is targeted for high-resolution video networks that are based on HDMI™/DVI standards, and TMDS signal processing.

The PI3HDX412BD is an active single TMDS channel to two TMDS channel Splitter and DeMux with Hi-Z outputs. The device drives differential signals to multiple video display units.

It provides controllable output swing levels that can be controlled through pin control or I2C control, depending on the mode select pin. This solution also provides a unique advanced pre-emphasis technique to increase rise and fall times.

The maximum HDMI™/DVI data rate of 3.4Gbps provides 1920x1080 @60Hz resolution or 4K @30Hz required for 4K HDTV and PC graphics products. Due to its active uni-directional feature, this switch is designed for usage only for the video driver's side. For PC graphics application, the device sits at the driver's side to switch between multiple display units, such as PC LCD monitor, projector, TV, etc.

PI3HDX412BD ensures transmitting high bandwidth video streams from PC graphics source to end display units. It will also provide enhanced robust ESD/EOS protection, which is required by many consumer video networks today.

Features

- **Support up to 3.4Gbps TMDS Serial Link Compliant with HDMI 1.4b requirement**
- **Data rate per channel support 4096 x 2160 pixel resolution, color 8-bit YCbCr 4:2:0 format.**
- **HDMI 1:2 Splitter-mode or 1:2 DeMux-mode with Equalization & Pre-emphasis up to 340 MHz Clock**
- **AC or DC-coupled Differential Signal Input for TMDS and DP++**
- **Configurable TMDS Output Signal with Port Selection, Pre-emphasis, Voltage Swing, Slew Rate Control with I2C control mode**
- **Support TMDS power-down Squelch Mode with Built-in Clock detector**
- **Control Status Register controlled by Pin strap or I^2C mode programming**
- **ESD Protection on I/O pins to connector: 8KV Contact per IEC6100-4-2 and 2KV HBM**
- **Supply Voltage: 3.3V**
- **Industrial Temperature Range: -40°C to 85°C**
- **Packaging (Pb-free & Green): 56-contact TQFN (ZB56)**

Applications

- **Display Peripheral Box**
- **Digital Signage Display**
- **Video Processing Devices**

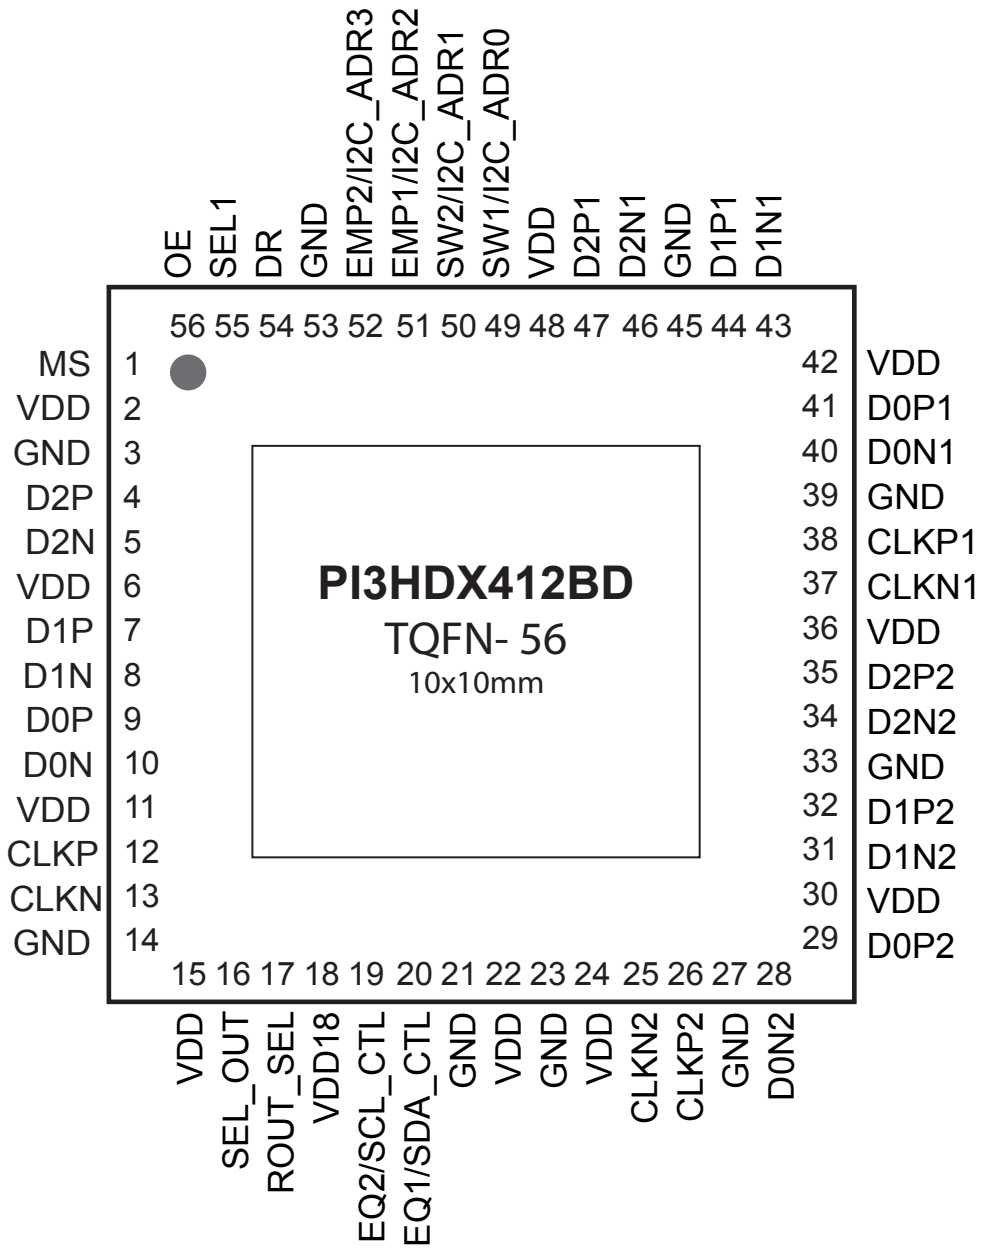
Package Pin-out



PI3HDX412BD Package & Pinout

TMDS In/Out Pin Assignment

Pin #	Pin Name	Type	Description
4	D2P	I	Input Port. TMDS Clock and Data Input pins. When Input Termination Resistor (Rt = 50 Ohm) tied to VDD or GND, Rpd=200 kOhm shall be "OFF" state. I2C registers can control Rt and Rpd ON/OFF state.
5	D2N	I	
7	D1P	I	
8	D1N	I	
9	D0P	I	
10	D0N	I	
12	CLKP	I	
13	CLKN	I	
25	CLKN2	O	Output Port 2. TMDS Clock and Data Output pins. ROUT_SEL pin enables Output Termination Resistor (Rout=50 Ohm).
26	CLKP2	O	
28	D0N2	O	
29	D0P2	O	
31	D1N2	O	
32	D1P2	O	
34	D2N2	O	
35	D2P2	O	
37	CLKN1	O	Output Port 1. TMDS Clock and Data Output pins. ROUT_SEL pin enables Output Termination Resistor (Rout=50 Ohm).
38	CLKP1	O	
40	D0N1	O	
41	D0P1	O	
43	D1N1	O	
44	D1P1	O	
46	D2N1	O	
47	D2P1	O	

Note: In TMDS Data and Clock Differential Pair, the polarity +/- (or P/N) of each pair can use interchangeably. When input TMDS Input Clock polarity +/- pin swaps, output TMDS Clock of port 1 and port 2 shall swapped accordingly.

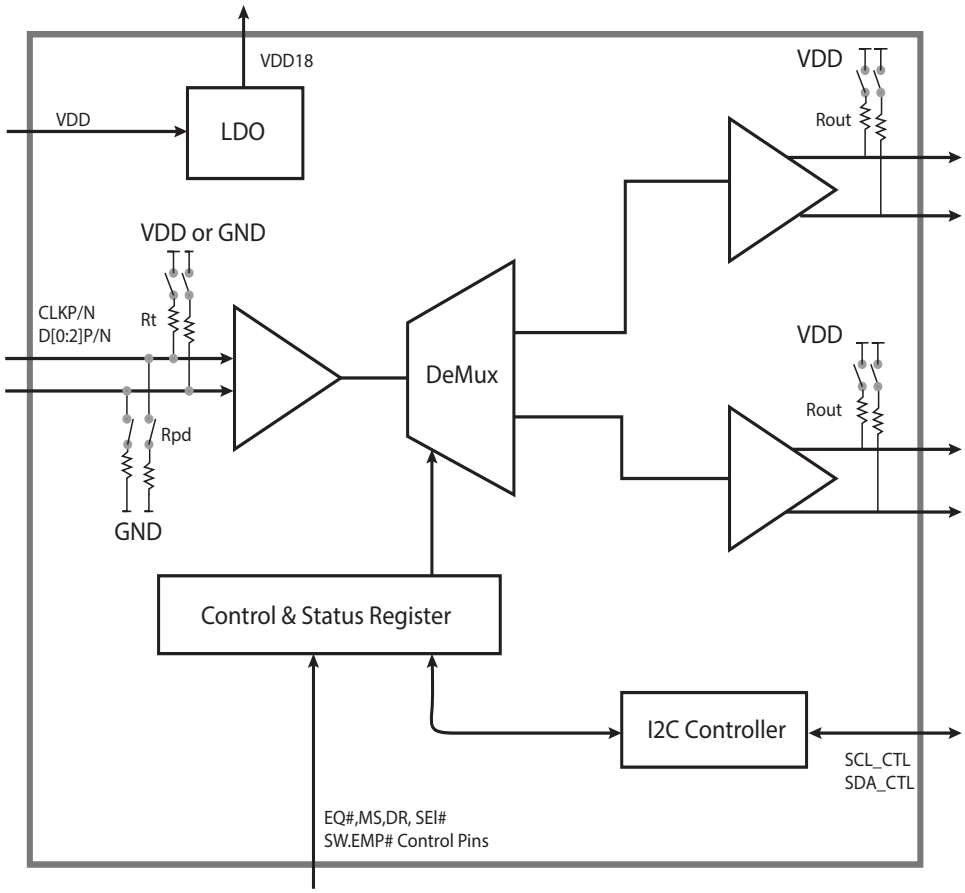
Block Diagram



Functional Description

Squelch Mode:

Output Disable (Squelch) Mode uses TMDS Clock channel signal detection. When low voltage levels on the TMDS input clock signals are detected, Squelch state enables and TMDS output port signals shall disable; when the TMDS clock input signal levels are above a pre-determined threshold voltage, output ports shall return to the normal voltage swing levels.

When enable Squelch mode, input termination resistor will be enabled together. When Squelch is disabled through I2C register programming RX_SET[1]="1" and no TMDS input signal condition, TMDS D[0:2]P/N will be undetermined status. In Squelch state, TMDS output is high impedance state or TMDS output port shall 50 Ohm pull-up at source termination output.

Function Control Table

Absolute Maximum Ratings

Supply Voltage to Ground Potential 4.5V
DC SIG Voltage . . . . . –0.5V to V_{DD}+0.5V
Storage Temperature . . . . . –65°C to +150°C
Operating Temperature . . . . . -40 to +85°C

Note:
Stresses greater than those listed under MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

Thermal Characteristics

Symbol	Parameter	Ratings	Units
T_{Jmax}	Junction Temperature	125	°C
$R_{\theta JC}$	Thermal Resistance, Junction to Case	5	°C/W
$R_{\theta JA}$	Thermal Resistance, Junction to Ambient	24	

Electrical Characteristics T_J=25 °C unless otherwise noted

DC Specifications

Symbol	Parameter	Test Conditions	Min.	Typ.	Max.	Units
V_{DD}	Operation Voltage		3.0	3.3	3.6	V
I_{DD}	VDD Supply Current			250	290	mA
I_{DDQ}	VDD Quiescent Current	OE = 1, No input signal		50	80	mA
I_{STB}	Standby mode	OE = 0		1	5	mA
TMDS Differential Pins						
V_{OH}	Single-ended high level output voltage	VDD = 3.3 V, Rout=50 Ω	VDD-10		VDD+10	mV
VOL	Single-ended low level output voltage		VDD-600		VDD–400	mV
Vswing	Single-ended output swing voltage		400		600	mV
VOD(O)	Overshoot of output differential voltage				180	mV
VOD(U)	Undershoot of output differential voltage				200	mV
VOC(SS)	Change in steady-state common- mode output voltage between logic states				5	mV
IOS	Short Circuit output current		-12		12	mA
IOS	Short Circuit output current at double termination mode		-24		24	mA
VI(open)	Single-ended input voltage under high impedance input or open input	IL = 10 uA	VDD-10		VDD+10	mV

Symbol	Parameter	Test Conditions	Min.	Typ.	Max.	Units
RT	Input termination resistance	VIN = 2.9 V	45	50	55	Ohm
IOZ	Leakage current with Hi-Z I/O	VDD = 3.6 V, OE = 0		30	100	µA
Control pins (OE, SEL1, EMP2, EMP1, SW2, SW1, MS)						
I_{IH}	High level digital input current	V_{IH} =V_{DD}	-10		10	µA
I_{IL}	Low level digital input current	V_{IL} = GND	-50		10	µA
V_{IH}	High level digital input voltage		2.4			V
V_{IL}	Low level digital input voltage		0		0.8	V

AC Specifications

Symbol	Parameter	Test Conditions	Min.	Typ.	Max.	Units
tpd	Propagation delay				2000	ps
t_r	Differential output signal rise time (20% - 80%), 0 dB / Open drain	VDD=3.3V, ROUT=50 ohm		117		ps
t_f	Differential output signal fall time (20% - 80%), 0 dB / Open drain			117		ps
$t_{sk(p)}$	Pulse skew			15	50	ps
$t_{sk(D)}$	Intra-pair differential skew			25	50	ps
$t_{sk(O)}$	Inter-pair differential skew				100	ps
t_{sx}	Select to switch output				550	ns
t_{en}	Enable time			1	10	us
t_{dis}	Disable time				50	ns
tjit_clk(pp)	Peak-to-peak output jitter CLK residual jitter	Data: 3.4 Gbps data pattern Clock: 340 MHz		10		ps
tjit_data(pp)	Peak-to-peak output jitter Date residual jitter			28		ps

Note:
1. Overshoot of output differential voltage $V_{OD(O)}$ = ($V_{SWING(MAX)}$ *2) * 15%
2. Undershoot of output differential voltage $V_{OD(O)}$ = ($V_{SWING(MIN)}$ *2) * 25%

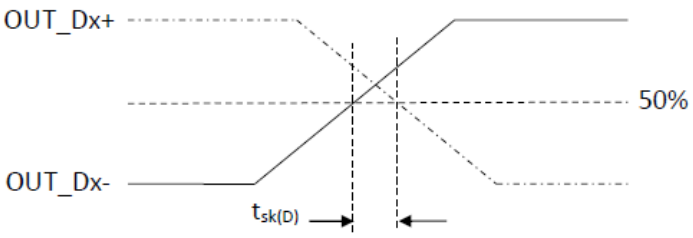
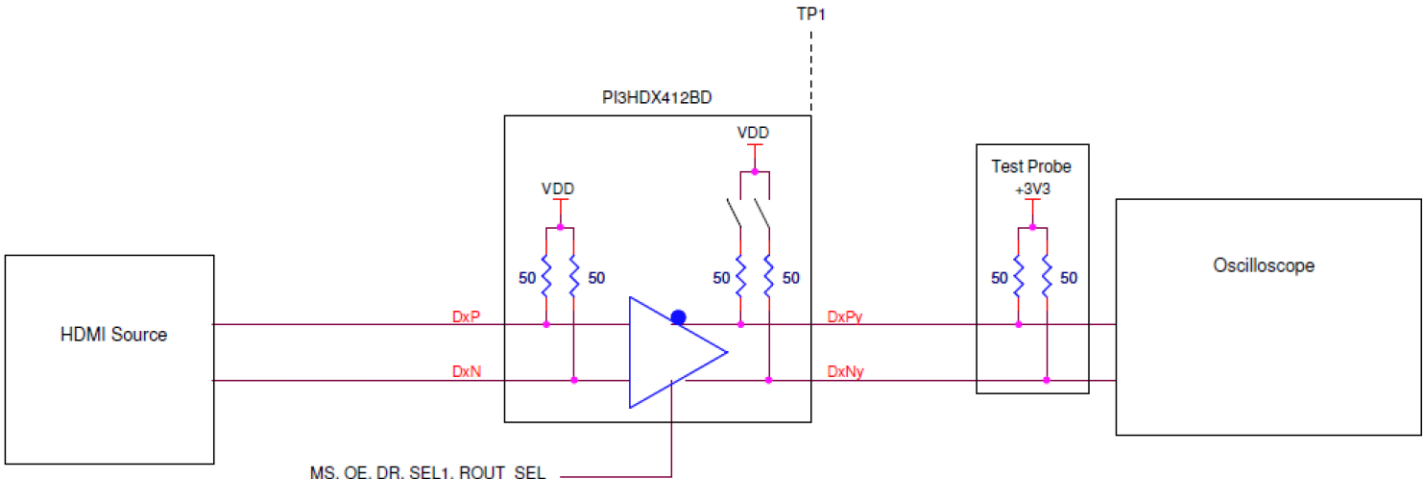
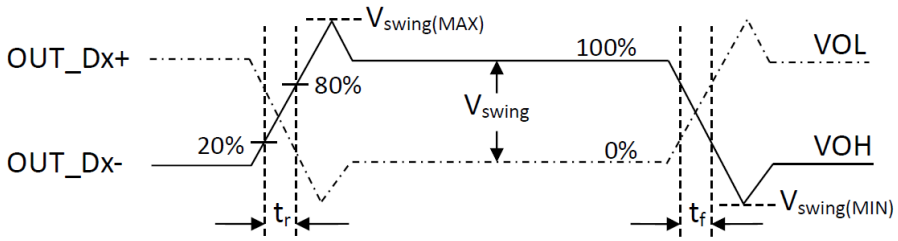
Intra-pair Skew Definition



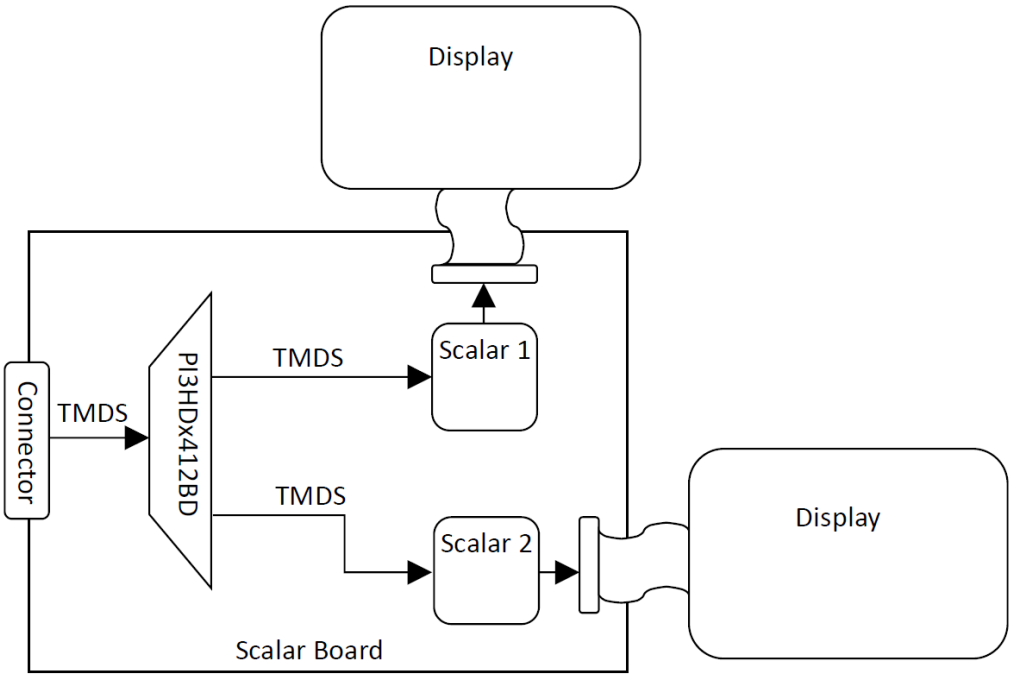
Test Setup of DC-coupled TMDS Input Measurement



Rise/Fall Time and Single-ended Swing Voltage

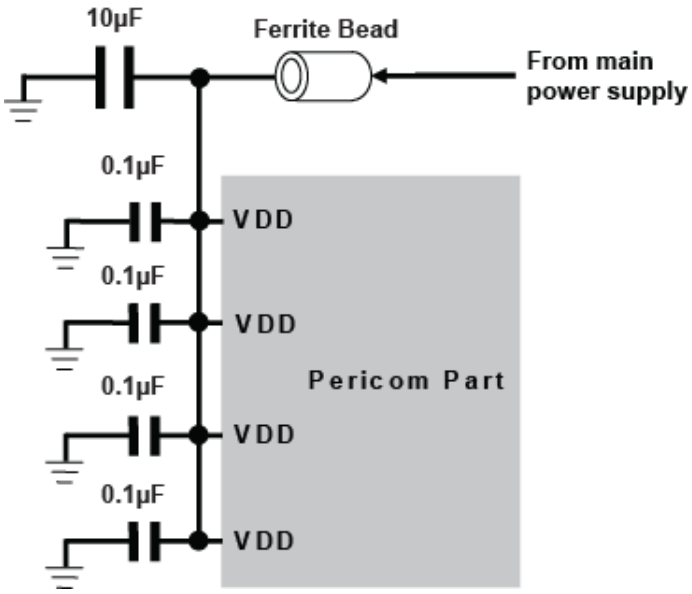


Typical Splitter Application



Power Supply Decoupling Circuit

It is recommended to put 0.1 µF decoupling capacitors on each VDD pins of our part, there are four 0.1 µF decoupling capacitors are put in Figure 1 with an assumption of only four VDD pins on our part, if there is more or less VDD pins on our Pericom parts, the number of 0.1 µF decoupling capacitors should be adjusted according to the actual number of VDD pins. On top of 0.1 µF decoupling capacitors on each VDD pins, it is recommended to put a 10 µF decoupling capacitor near our part's VDD, it is for stabilizing the power supply for our part. Ferrite bead is also recommended for isolating the power supply for our part and other power supplies in other parts of the circuit. But, it is optional and depends on the power supply conditions of other circuits.



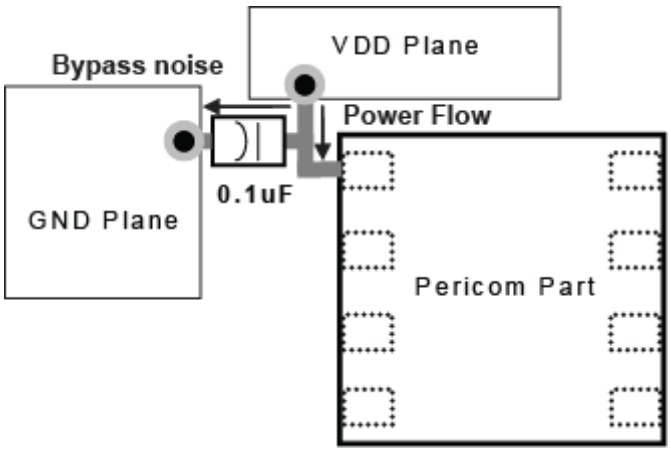
Recommended Power Supply Decoupling Capacitor Diagram

Requirements on the De-coupling Capacitors

There is no special requirement on the material of the capacitors. Ceramic capacitors are generally being used with typically materials of X5R or X7R.

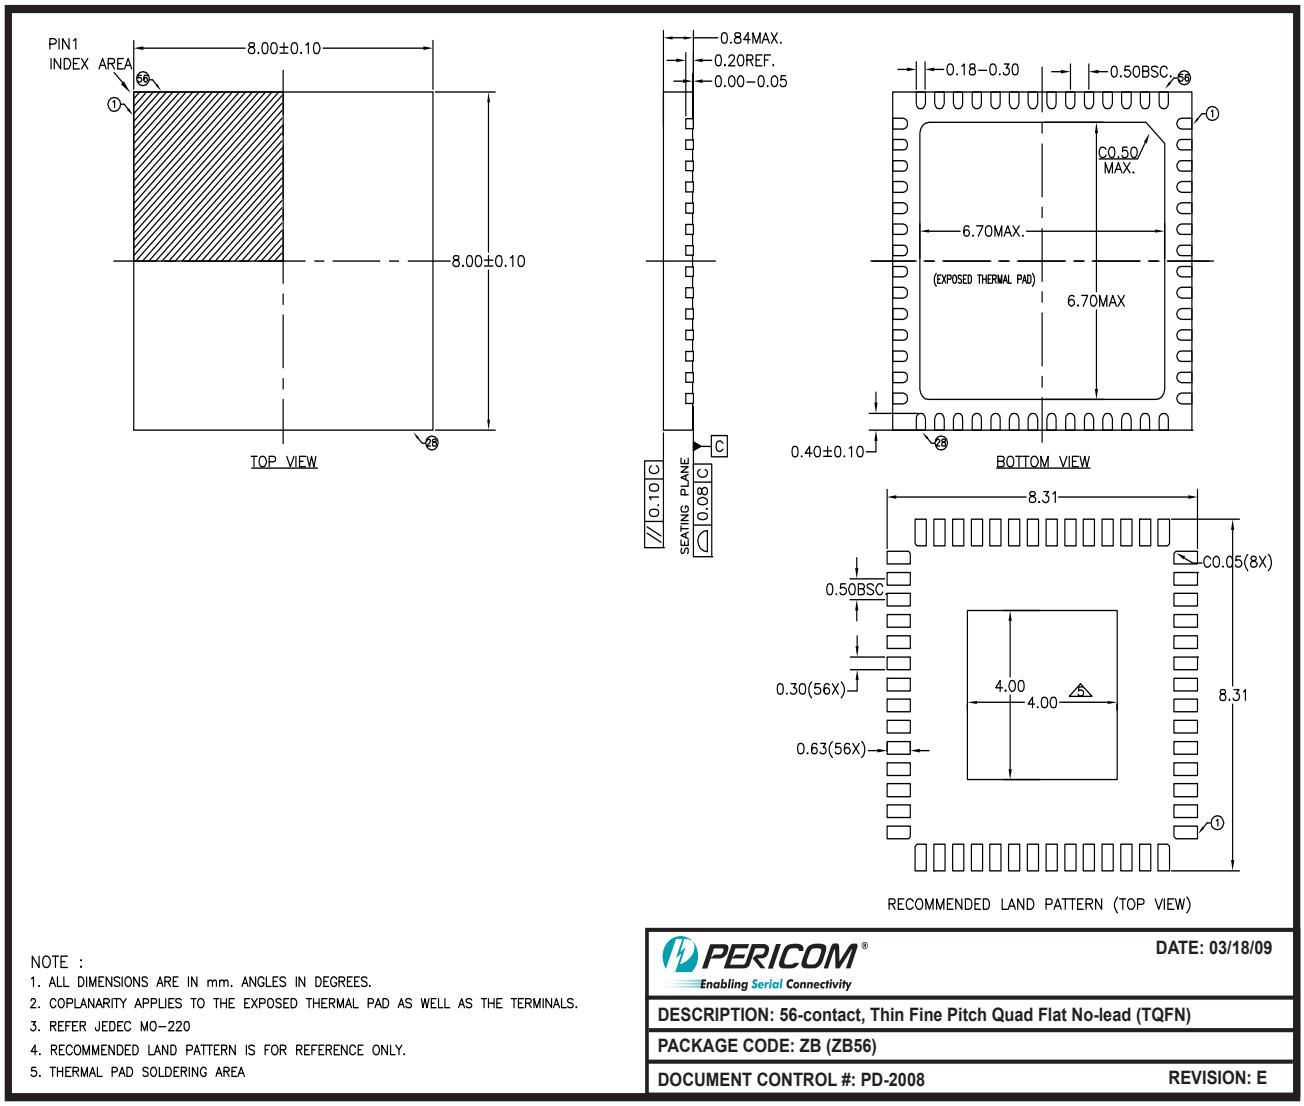
Layout and Decoupling Capacitor Placement Consideration

- Each 0.1 µF decoupling capacitor should be placed as close as possible to each VDD pin.
- VDD and GND planes should be used to provide a low impedance path for power and ground.
- Via holes should be placed to connect to VDD and GND planes directly.
- Trace should be as wide as possible
- Trace should be as short as possible.
- The placement of decoupling capacitor and the way of routing trace should consider the power flowing criteria.
- 10 µF Capacitor should also be placed closed to our part and should be placed in the middle location of 0.1 µF capacitors.
- Avoid the large current circuit placed close to our part; especially when it is shared the same VDD and GND planes. Since large current flowing on our VDD or GND planes will generate a potential variation on the VDD or GND of our part.



Decoupling Capacitor Placement Diagram

Package Mechanical: 56-pin TQFN (ZB56)



NOTE :
1. ALL DIMENSIONS ARE IN mm. ANGLES IN DEGREES.
2. COPLANARITY APPLIES TO THE EXPOSED THERMAL PAD AS WELL AS THE TERMINALS.
3. REFER JEDEC MO-220
4. RECOMMENDED LAND PATTERN IS FOR REFERENCE ONLY.
5. THERMAL PAD SOLDERING AREA

LIFE SUPPORT
Diodes Incorporated products are specifically not authorized for use as critical components in life support devices or systems without the express written approval of the Chief Executive Officer of Diodes Incorporated. As used herein:
A. Life support devices or systems are devices or systems which:
1. are intended to implant into the body, or
2. support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in significant injury to the user.

B. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or to affect its safety or effectiveness.
Customers represent that they have all necessary expertise in the safety and regulatory ramifications of their life support devices or systems, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of Diodes Incorporated products in such safety-critical, life support devices or systems, notwithstanding any devices- or systems-related information or support that may be provided by Diodes Incorporated. Further, Customers must fully indemnify Diodes Incorporated and its representatives against any damages arising out of the use of Diodes Incorporated products in such safety-critical, life support devices or systems.
