## Block Diagram

## Description

The PI3DBS12212A is an 4 to 2 differential channel multiplexer/ demultiplexer switch. This solution can switch multiple signal types up to data rate of 12 Gbps . Using a unique design technique, $\mathrm{Di}-$ odes has been able to minimize the impedance of the switch such that the attenuation observed through the switch is minimal. The unique design technique also offers a layout targeted for USB3.0, USB3.1, 10GE, Thunderbolt, and SAS3.0 signals, which minimizes the channel to channel skew as well as channel to channel crosstalk as required by high speed signals.

## Applications

Routing high speed differential signals such as USB3.0, USB3.1, 10GE, Thunderbolt, and SAS3.0.
