NEW PRODUCT

AP2303

DDR BUS TERMINATION REGULATOR

Description

The AP2303 is a low dropout linear regulator to generate termination voltage of DDR-SDRAM system. The regulator can source or sink up to 1.75A current continuously. The output voltage is regulated to track tightly with the reference voltage ($1/2V_{DDQ}$) within ±10mV.

The AP2303 supports soft start-up when used to turn on the VCNTL and VREFEN. It integrates a shutdown circuit that will be triggered once the voltage of VIN, VCNTL or VREFEN falls below a certain value.

AP2303 features over temperature protection and current limit protection for both source and sink.

AP2303 is available in packages of SOIC-8 and PSOP-8.

Features

- Support DDR-II (V_{TT}=0.9V), DDR-III (V_{TT}=0.75V), DDR-IIIL (V_{TT}=0.675V), DDR-IV (V_{TT}=0.6V) Application
- Source and Sink up to 1.75A Current
- Output Voltage Accuracy Over Full Load: ±2% (Max.)
- Soft Start-up and Shutdown along with V_{IN}, V_{CNTL} and V_{REFEN} Rising and Shutdown along with V_{IN}, V_{CNTL} and V_{REFEN} Dropping
- Flexible Output by 2 External Resistors
- Requires Minimum 10µF Output Ceramic Capacitor for Application
- Current Limit Protection for Both Source and Sink
- OTSD Protection
- **Totally Lead-Free & Fully RoHS Compliant (Notes 1 & 2)**
- **Halogen and Antimony Free. "Green" Device (Note 3**)

Pin Assignments

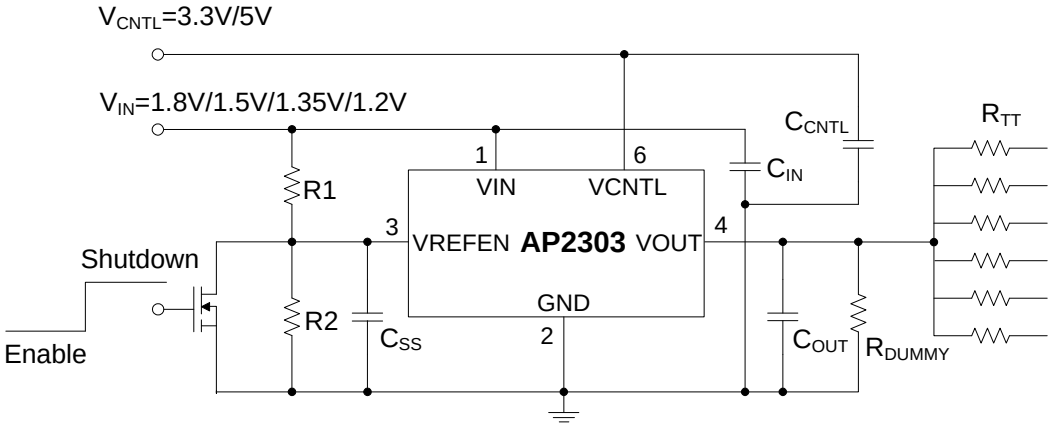
PSOP-8

Applications

- DDR-II/DDR-III/DDR-IIIL/DDR-IV Memory System
- Desktop PC, Notebook Mother Board
- Graphic Card
- STB, LCD-TV, Web-TV

Notes:
1. No purposely added lead. Fully EU Directive 2002/95/EC (RoHS) & 2011/65/EU (RoHS 2) compliant.
2. See http://www.diodes.com/quality/lead_free.html for more information about Diodes Incorporated's definitions of Halogen- and Antimony-free, "Green" and Lead-free.
3. Halogen- and Antimony-free "Green" products are defined as those which contain <900ppm bromine, <900ppm chlorine (<1500ppm total Br + Cl) and <1000ppm antimony compounds.

Typical Applications Circuit

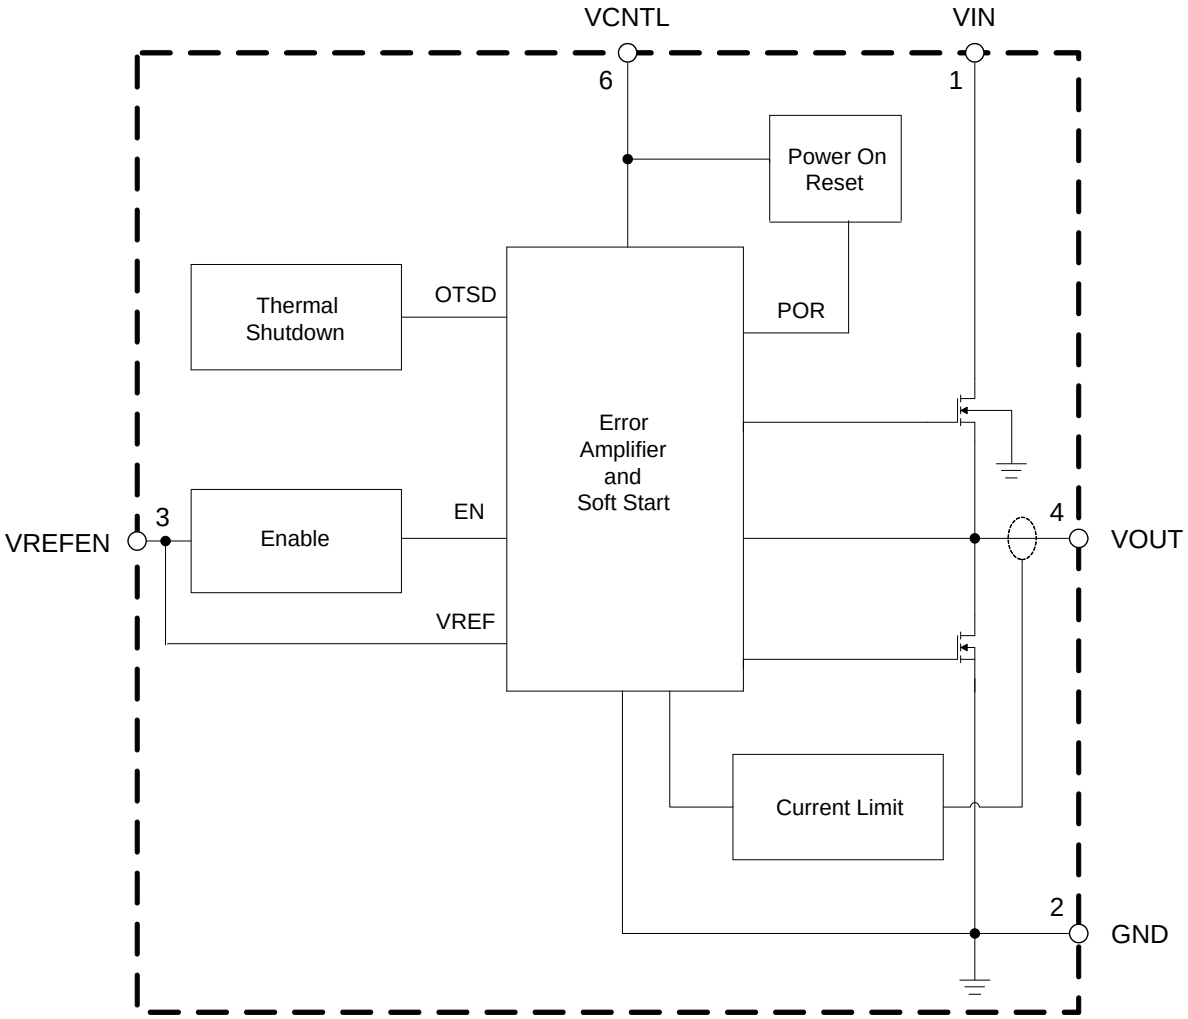


NEW PRODUCT

Pin Descriptions

Pin Number	Pin Name	Function
1	VIN	Unregulated input supply. A small 10µF MLCC should be connected from this pin to GND.
2	GND	Ground
3	VREFEN	Reference voltage input and active low shutdown control pin. Pulling the pin to ground turns off device by BJT or FET. When it is released, a soft-start will take for about 0.1ms.
4	VOUT	Regulated voltage output. A minimum of 10µF ceramic capacitor to ground is required to assure stability.
5, 7, 8	NC	No Connection
6	VCNTL	VCNTL supplies the internal control circuitry and provides the drive voltage.
–	Exposed Pad	The exposed pad should be connected to ground copper for better heat dissipation performance.

Functional Block Diagram



NEW PRODUCT

Absolute Maximum Ratings (Note 4)

Symbol	Parameter	Rating		Unit
V_{IN}	Power Input Voltage	-0.3 to 6		V
V_{CNTL}	Control Input Voltage	-0.3 to 6		V
V_{REFEN}	Reference Input Voltage	-0.3 to 6		V
T_{STG}	Storage Temperature	+150		°C
T_J	Junction Temperature	+150		°C
T_{LEAD}	Lead Temperature (Soldering, 10sec)	+260		°C
θ_{JA}	Thermal Resistance (Junction to Ambient) (Note 5)	PSOP-8	80	°C/W
		SOIC-8	110	
θ_{JC}	Thermal Resistance (Junction to Case)	PSOP-8	38	°C/W
		SOIC-8	50	
ESD	ESD (Human Body Model)	2000		V
ESD	ESD (Machine Model)	200		V

Notes: 4. Stresses greater than those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "Recommended Operating Conditions" is not implied. Exposure to "Absolute Maximum Ratings" for extended periods may affect device reliability.

5. θ_{JA} is measured with the component mounted on a 2-Layer FR-4 board with 2.54cm*2.54cm thermal sink pad in free air.

Recommended Operating Conditions

Symbol	Parameter	Min	Max	Unit
V_{CNTL}	Control Input Voltage (Note 6)	3.0	5.5	V
V_{IN}	Power Input Voltage	1.2	5.5	V
V_{REFEN}	Reference Input Voltage	0.6	V_{CNTL}-2.2	V
T_J	Operating Junction Temperature Range	-40	+125	°C
T_A	Operating Ambient Temperature Range	-40	+85	°C

Note 6: Keep $V_{CNTL} \geq V_{IN}$ in operation power on and power off sequences.

NEW PRODUCT

Electrical Characteristics (@T_A = +25°C, V_{IN} = 1.8V/1.5V/1.35V/1.2V, V_{CNTL} = 3.3V, V_{REFEN} = 0.9V/0.75V/0.675V/0.6V, C_{IN} = 10µF (Ceramic), C_{OUT} = 10µF (Ceramic), unless otherwise specified.)

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
Input						
I_{VCNTL}	VCNTL Operating Current	No Load	–	0.5	1.5	mA
$I_{SD-VCNTL}$	VCNTL Input Current in Shutdown Mode	V_{REFEN} < 0.15V	–	30	50	µA
I_{SD-VIN}	VIN Input Current in Shutdown Mode	V_{REFEN} < 0.15V	-1	–	1	µA
I_{VREFEN}	VREFEN Leakage Current	V_{REFEN} = 0.75V	-1	–	1	µA
Output						
V_{OS}	Output Offset Voltage (Note 7)	No Load	-10	0	10	mV
$V_{DROPOUT}$	Dropout Voltage	V_{CNTL} = 3.3V, I_{OUT} = 1A	–	220	–	mV
		V_{CNTL} = 3.3V, I_{OUT} = 1.5A	–	400	–	
		V_{CNTL} = 3.3V, I_{OUT} = 1.75A	–	520	–	
V_{LOAD}	Load Regulation	I_{OUT} = 0A to 1.75A	-20	–	20	mV
		I_{OUT} = 0A to -1.75A	-20	–	20	
Protection						
I_{LIMIT}	Current Limit	Source	1.75	–	–	A
		Sink	–	–	-1.75	
I_{SHORT}	Short Current	V_{OUT} = 0V	–	2	–	A
		V_{OUT} = V_{IN}	–	-2	–	
T_{SHDN}	Thermal Shutdown Temperature	3.3V ≤ V_{CNTL} ≤ 5V	–	+160	–	°C
–	Thermal Shutdown Hysteresis	–	–	+30	–	°C
Start-up & Shutdown Function						
V_{IH}	VREFEN Shutdown Threshold Voltage	Output = High	0.4	–	–	V
V_{IL}		Output = Low	–	–	0.15	
$V_{CNTL-ON}$	VCNTL Shutdown Threshold Voltage	Output = High	2.9	–	–	V
$V_{CNTL-OFF}$		Output = Low	–	–	2.2	
V_{IN-ON}	VIN Shutdown Threshold Voltage	Output = High	1.1	–	–	V
V_{IN-OFF}		Output = Low	–	–	0.4	

Note 7: V_{OS} is the voltage measurement defined as V_{OUT} subtracted from V_{REFEN}.

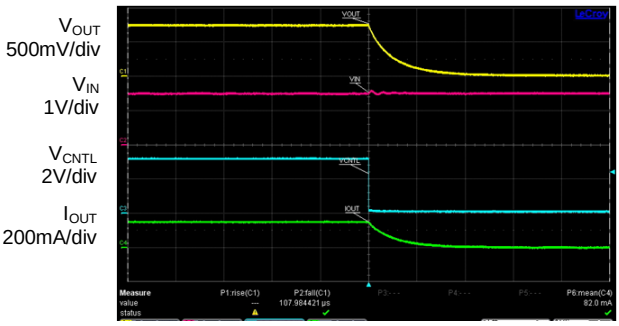
VCNTL Power Off
(C_{IN}=C_{OUT}=10μF, R_{LOAD}=5Ω)



Time 100 μs/div

NEW PRODUCT

Application Information

1. Input Capacitor

The input capacitor of VIN should be placed to VIN pin as close as possible. Use a low ESR, 10µF or larger MLCC capacitor to provide surge current during load transient.

The input capacitor for VCNTL is recommended to be 0.47µF or larger to decouple the supply voltage of AP2303's control circuitry.

2. Output Capacitor

The output capacitor is recommended with a 10µF or higher MLCC capacitor which will be sufficient at full temperature range. An aluminum electrolytic capacitor with low ESR also should be larger than 10µF. The output capacitor should be placed to VOUT pin as close as possible.

3. Reference Voltage

A reference voltage is applied to the VREFEN pin by a resistor divider between VIN and GND pins. And a 0.1µF to 1µF bypass capacitor is preferred to form a low-pass filter to reduce the noise from VIN. More capacitance and large resistance will increase the start-up time after VIN power-up.

4. Thermal Consideration

There's an internal thermal protection circuitry of AP2303 to protect device during overload conditions. For continuous operation, make sure not to exceed the operating junction temperature range of +125°C. The power dissipation definition in device is:

$P_D=(V_{IN} - V_{OUT})xI_{OUT}+V_{IN}xI_Q$

The maximum power dissipation depends on the thermal resistance of IC package, PCB layout and the surrounding airflow. The maximum power dissipation can also be calculated as:

$P_{D(MAX)} = (T_{J(MAX)}-T_A)/\theta_{JA}$

The maximum power dissipation for PSOP-8 package at T_A = +25°C can be calculated as:

$P_{D(MAX)}$ = (125°C-25°C) / (80°C/W) = 1.25W

LIFE SUPPORT

Diodes Incorporated products are specifically not authorized for use as critical components in life support devices or systems without the express written approval of the Chief Executive Officer of Diodes Incorporated. As used herein:

A. Life support devices or systems are devices or systems which:

1. are intended to implant into the body, or
2. support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in significant injury to the user.

B. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or to affect its safety or effectiveness.

Customers represent that they have all necessary expertise in the safety and regulatory ramifications of their life support devices or systems, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of Diodes Incorporated products in such safety-critical, life support devices or systems, notwithstanding any devices- or systems-related information or support that may be provided by Diodes Incorporated. Further, Customers must fully indemnify Diodes Incorporated and its representatives against any damages arising out of the use of Diodes Incorporated products in such safety-critical, life support devices or systems.
