

## Description

The TLV27x provides a higher performance alternative to the TLC27x series of op-amps. These devices take the minimum operating supply voltage down to 2.7V over the extended industrial temperature range while adding the rail-to-rail output swing feature.

This makes it an ideal alternative to the TLC27x family for applications where rail-to-rail output swings are essential. The TLV27x also provides 2-MHz bandwidth from only 550µA supply current.

The TLV27x is fully specified for 5V and ±5V supplies. The maximum recommended supply voltage is 16V. The devices can be operated from a variety of rechargeable cells from ±8V down to ±1.35V.

The CMOS inputs enable use in high-impedance sensor interfaces, with the lower voltage operation making an attractive alternative for the TLC27x in battery-powered applications.

The 2.7-V operation makes it compatible with Li-Ion powered systems and the operating supply voltage range of many micro-power micro-controllers available today.

All parts are available in SOIC packaging; the TLV271 is additionally available in the SOT25 package. Two temperature grades are available for the parts; C grade offers 0 to +70°C operating, I grade offers -40°C to +125°C operating.

## Features

- High Performance Alternative to TLC27x Series
- Rail to Rail Output
- Wide Bandwidth: 2MHz
- High Slew Rate: 2.0 V/µs
- Wide Range of Supply Voltages: 2.7V to 16V
- Low Supply Current: 550µA per Channel
- Low Input Noise Voltage: 35nV/√Hz
- Low Input Bias Current: 1pA
- Specified Temperature Ranges:
  - 0°C to +70°C: Commercial Grade
  - -40°C to +125°C: Industrial Grade
- **Totally Lead-Free & Fully RoHS Compliant (Notes 1 & 2)**
- **Halogen and Antimony Free. "Green" Device (Note 3)**

- Notes:
1. No purposely added lead. Fully EU Directive 2002/95/EC (RoHS) & 2011/65/EU (RoHS 2) compliant.
  2. See [http://www.diodes.com/quality/lead\\_free.html](http://www.diodes.com/quality/lead_free.html) for more information about Diodes Incorporated's definitions of Halogen- and Antimony-free, "Green" and Lead-free.
  3. Halogen- and Antimony-free "Green" products are defined as those which contain <900ppm bromine, <900ppm chlorine (<1500ppm total Br + Cl) and <1000ppm antimony compounds.

## Pin Assignments

**Pin Descriptions**

Pin Number		TLV271		TLV272	
SOT25	SO-8/ MSOP-8	Pin Name	Function	Pin Name	Function
	1	N/C	No connection	1OUT	Output op-amp 1
4	2	IN-	Inverting input	1IN-	Inverting input op-amp 1
3	3	IN+	Non-inverting input	1IN+	Non-inverting input op-amp 1
2	4	GND	Ground	GND	Ground
	5	N/C	No connection	2IN+	Non inverting input op-amp 2
1	6	OUT	Output	2IN-	Inverting input op-amp 2
5	7	V <sub>DD</sub>	Supply	2OUT	Output op-amp 2
	8	N/C	No connection	V <sub>DD</sub>	Supply

### Absolute Maximum Ratings (Note 4)

Symbol	Parameter		Rating	Unit
V <sub>DD</sub>	Supply Voltage: (Note 5)		16.5	V
V <sub>ID</sub>	Differential Input Voltage		±V <sub>DD</sub>	V
V <sub>IN</sub>	Input Voltage Range (Note 5)		-0.2 to V <sub>DD</sub> +0.2V	V
I <sub>IN</sub>	Input Current Range		±10	mA
I <sub>O</sub>	Output Current Range		±100	mA
P <sub>D</sub>	Power Dissipation (Note 6)	TLV271 SOT25	220mW	mW
		TLV271 SO-8	396mW	
		TLV272 SO-8	396mW	
		TLV272 MSOP-8	300mW	
T <sub>A</sub>	Operating Temperature Range	C grade	0 to +70	°C
		I grade	-40 to +125	
T <sub>J</sub>	Operating Junction Temperature		150	°C
T <sub>ST</sub>	Storage Temperature Range		-65 to +150	°C
ESD HBM	Human Body Model ESD Protection (1.5kΩ in series with 100pF)		2	kV
ESD MM	Machine Model ESD Protection		150	V

- Notes:
- Stresses beyond those listed under absolute maximum ratings may cause permanent damage to the device. These are stress ratings only; functional operation of the device at these or any other conditions beyond those indicated under recommended operating conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
  - All voltage values, except differential voltages, are with respect to ground
  - For operating at high temperatures, the TLV27x must be derated to zero based on a +150°C maximum junction temperature and a thermal resistance as below when the device is soldered to a printed circuit board, operating in a still air ambient:

Package	θ <sub>JA</sub>	Unit
SOT25	180	°C/W
SO-8	150	
MSOP-8	155

## Application Information

### Driving a Capacitive Load

When the amplifier is configured as below, capacitive loading directly on the output can decrease the device's phase margin leading to high frequency ringing or oscillations. Therefore, for capacitive loads of greater than 100pF, it is recommended that a resistor be placed in series ( $R_{NULL}$ ) with the output of the amplifier, as shown in Figure 25. A minimum value of 20Ω should work well for most applications.

Figure 28 Driving a Capacitive Load

### Offset Voltage

The output offset voltage, ( $V_{OO}$ ) is the sum of the input offset voltage ( $V_{IO}$ ) and both input bias currents ( $I_{IB}$ ) times the corresponding gains. The following schematic and formula can be used to calculate the output offset voltage:

Figure 29 Output Offset Voltage Model

### Other Configurations

When receiving low-level signals, limiting the bandwidth of the incoming signals into the system is often required. The simplest way to accomplish this is to place an RC filter at the non-inverting terminal of the amplifier (see Figure 30).

Figure 30 Single Pole Low Pass Filter

If even more attenuation is needed, a multiple pole filter is required. The Sallen-Key filter can be used for this task. For best results, the amplifier should have a bandwidth that is 8 to 10 times the filter frequency bandwidth. Failure to do this can result in phase shift of the amplifier.

Figure 31 2-Pole Low-Pass Sallen-Key Filter

Should Customers purchase or use Diodes Incorporated products for any unintended or unauthorized application, Customers shall indemnify and hold Diodes Incorporated and its representatives harmless against all claims, damages, expenses, and attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized application.

Products described herein may be covered by one or more United States, international or foreign patents pending. Product names and markings noted herein may also be covered by one or more United States, international or foreign trademarks.

This document is written in English but may be translated into multiple languages for reference. Only the English version of this document is the final and determinative format released by Diodes Incorporated.

#### LIFE SUPPORT

Diodes Incorporated products are specifically not authorized for use as critical components in life support devices or systems without the express written approval of the Chief Executive Officer of Diodes Incorporated. As used herein:

A. Life support devices or systems are devices or systems which:

1. are intended to implant into the body, or
2. support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in significant injury to the user.

B. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or to affect its safety or effectiveness.

Customers represent that they have all necessary expertise in the safety and regulatory ramifications of their life support devices or systems, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of Diodes Incorporated products in such safety-critical, life support devices or systems, notwithstanding any devices- or systems-related information or support that may be provided by Diodes Incorporated. Further, Customers must fully indemnify Diodes Incorporated and its representatives against any damages arising out of the use of Diodes Incorporated products in such safety-critical, life support devices or systems.
