

## IPS021(S)

### FULLY PROTECTED POWER MOSFET SWITCH

#### Features

- Over temperature shutdown
- Over current shutdown
- Active clamp
- Low current & logic level input
- E.S.D protection

#### Description

The IPS021/IPS021S are fully protected three terminal SMART POWER MOSFETs that feature over-current, over-temperature, ESD protection and drain to source active clamp. These devices combine a HEXFET® POWER MOSFET and a gate driver. They offer full protection and high reliability required in harsh environments. The driver allows short switching times and provides efficient protection by turning OFF the power MOSFET when the temperature exceeds 165°C or when the drain current reaches 5A. These devices restart once the input is cycled. The avalanche capability is significantly enhanced by the active clamp and covers most inductive load demagnetizations.

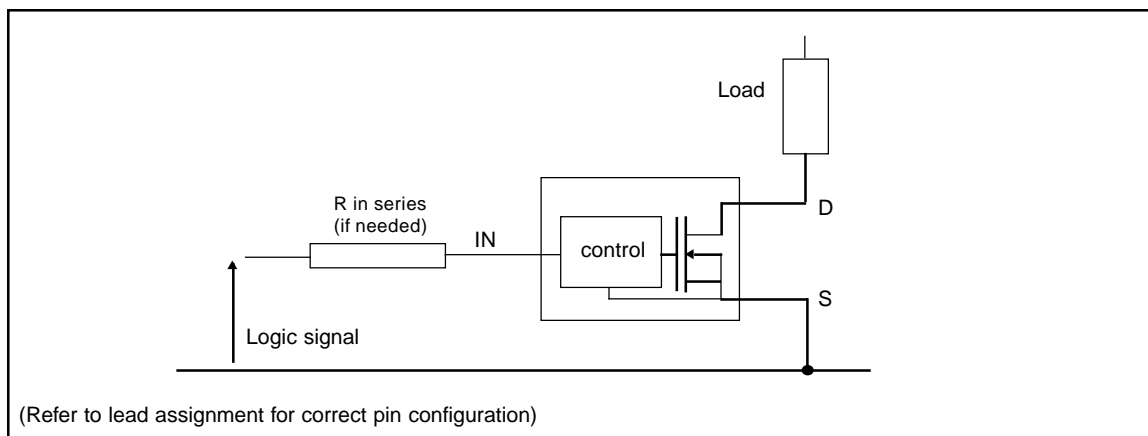

#### Product Summary

$R_{ds(on)}$	150m $\Omega$ (max)
$V_{clamp}$	50V
$I_{shutdown}$	5A
