Product Summary

Part Number	Radiation Level	RDS(on)	Ι _D
IRHNA6S7264	100 kRads(Si)	0.040Ω	50A
IRHNA6S3264	300 kRads(Si)	0.040Ω	50A

Description

IR HiRel R6 S-line technology provides high performance power MOSFETs for space applications. These devices have been characterized for both Total Dose and Single Event Effect (SEE) with useful performance up to LET of 60 (MeV/(mg/cm²). The combination of low RDs(on) and low gate charge reduces the power losses in switching applications such as DC-DC converters and motor controllers. These devices retain all of the well established advantages of MOSFETs such as voltage control, fast switching and temperature stability of electrical parameters.

Features

- Single Event Effect (SEE) Hardened
- Low RDS(on)
- Low Total Gate Charge
- Simple Drive Requirements
- Hermetically Sealed
- Ceramic Package
- Light Weight
- Surface Mount
- ESD Rating: Class 3A per MIL-STD-750, Method 1020

Radiation Characteristics

IR HiRel radiation hardened MOSFETs are tested to verify their radiation hardness capability. The hardness assurance program at IR Hirel is comprised of two radiation environments. Every manufacturing lot is tested for total ionizing dose (per notes 5 and 6) using the TO-3 package. Both pre- and post-irradiation performance are tested and specified using the same drive circuitry and test conditions in order to provide a direct comparison.
