

CDM10V-2

Flexible 0-10V Dimming Solution

Feature list

- Simplest 0-10 V design on the market. CDM10V-2 comes with following key settings:
 - 1kHz PWM frequency
 - 200 μ A Dimmer/Resistor Bias current
 - Dim-To-Off enabled
- Wide input V_{CC} range from 11 to 25 V
- Replaces many external components with a single chip reducing BOM and PCB space
- Minimum variation from device to device

Applications

- LED Drivers needing 0-10 V Dimming Circuits
- Industrial and Commercial Dimmable Applications:
Luminaires, Troffers, Downlights, Sconces, Undercabinet, Office Lighting, Signage applications, Dali applications

Product Type	Package
CDM10V-2	SOT23-6

Description

CDM10V-2 is a fully integrated 0-10 V dimming interface IC and comes in a SOT-23-6 package to cover space requirements on small PCBs.

The device is targeted for various dimming applications in lighting. The IC can be used to transmit analog voltage based signals from a 0-10 V dimmer or potentiometer to the dimming or PWM input of a lighting controller IC in the form of a 5 mA current based PWM signal to drive an external opto-coupler. It replaces many components in a traditional solution and reduces BOM and PCB space significantly.

The CDM10V-2 IC outputs a 0 - 100% PWM current signal at 1 kHz with an amplitude value of 5 mA.

Embedded digital signal processing maintains minimum variations from device to device.

Typical Application Circuit

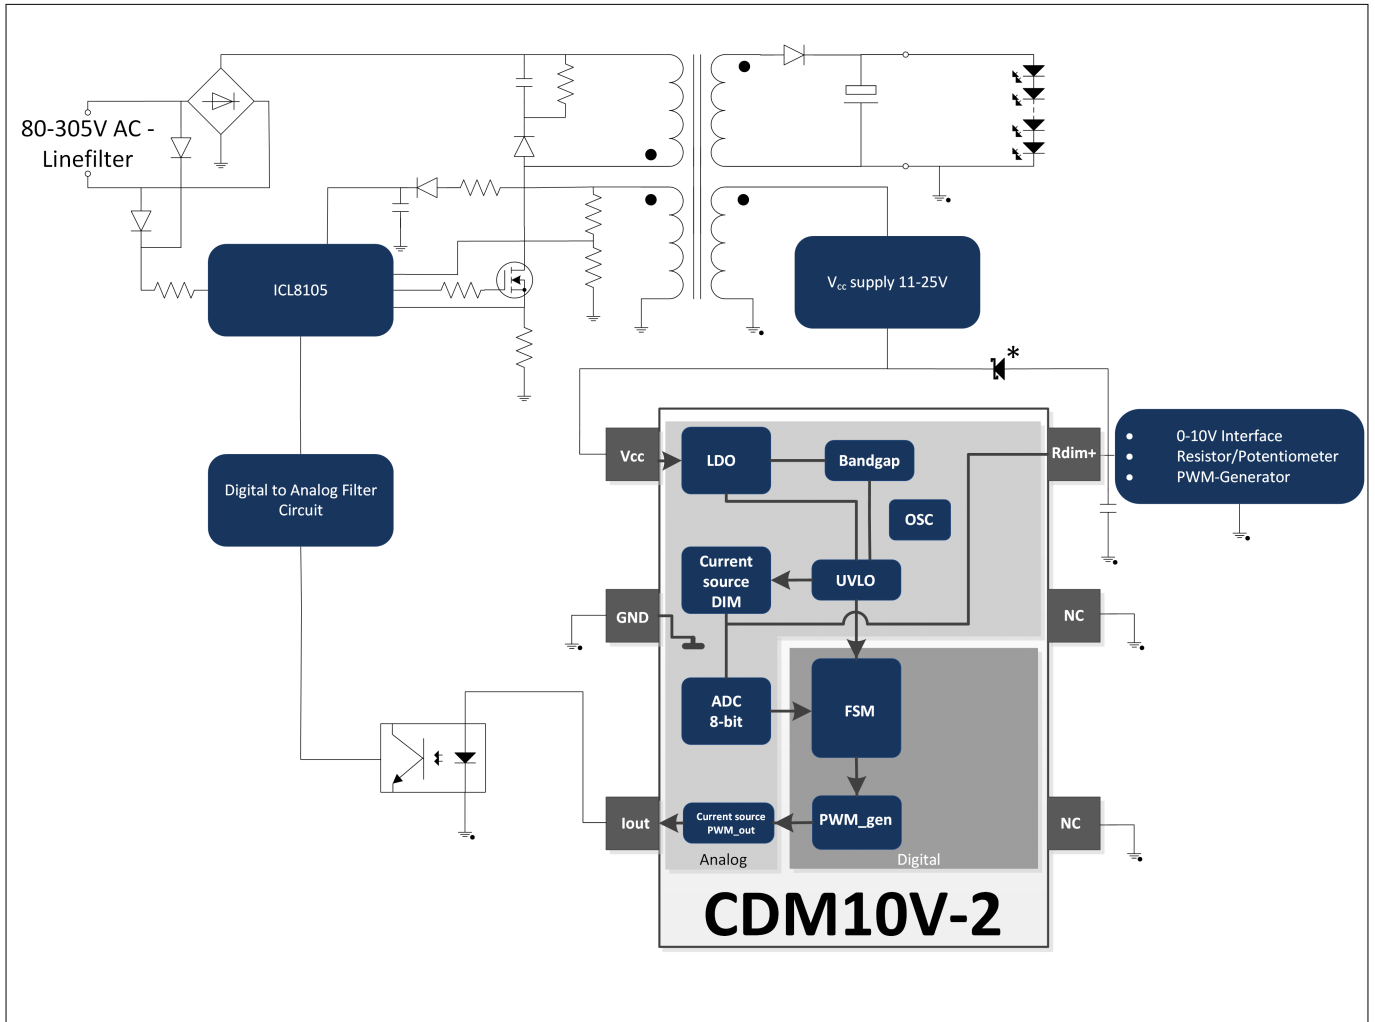

Figure 2 Typical Application Circuit

Note: The Diode marked with * is for the protection of the R_{dim+} -Pin when active dimming is used. This is because the voltage on this Pin is not allowed to be higher than $V_{CC}+0.5V$. It is advised to use a low leakage, low reverse current Schottky-Diode in order to not influence the dimming performance (e.g. MMSD301T1G).

Note: The capacitor connected to the R_{dim+} -Pin reduces the amount of coupled noise to the dimming signal. The size of this capacitance should be in the range of 2.2 - 10 nF (typ. 4.7 nF), where a small capacitor allows steeper edges of the dimming signal, a larger capacitor enhances the noise reduction.

Recommended cooling area

In order to guarantee the full functionality of the CDM10V-2 device, the required cooling area has to be selected according to the graph in [Figure 3](#).

Table 3 Absolute Maximum Ratings

Pin	Name	Values		Unit	Note or Test Condition
		Min.	Max.		
1	V _{CC}	11	25	V	
2	GND	0	0	V	Point of reference
3	I _{out}	-0.5	3.63	V	Depending on the optocoupler voltage @ 5mA
4	NC	-0.25	0.1	V	Connect to GND during operation
5	NC	-0.25	0.1	V	Connect to GND during operation
6	R _{dim+}	-0.5	V _{CC} + 0.5	V	An applied voltage above max value leads to the destruction of the device. Also valid if V _{CC} is 0 V.

Absolute maximum ratings (**Table 3**) are defined as ratings which when being exceeded may lead to destruction of the integrated circuit. Exposure to absolute maximum rating conditions for extended periods may affect device reliability. Maximum ratings are absolute ratings; exceeding only one of these values may cause irreversible damage to the integrated circuit. These values are not tested during production test.

Table 4 Electrical Characteristics

Parameter	Symbol	Values			Unit	Note or Test Condition
		Min.	Typ.	Max.		
Input Voltage	V _{in}	11		25	V	Operating Voltage
Junction Temperature Range	T _J	-40		135	°C	
Ambient Temperature Range	T _A	-40		105	°C	
Power Dissipation	P _{tot}	6.05 @ 1% duty cycle;	130 @ 100% duty cycle 54 @ 50% duty cycle	160 @ 100% PWM & 25 V _{in}	mW	Dimmer current included
Current Consumption	I _{CC}			1	mA	Current Consumption of the IC for self supply
Output Current for Dimmer	I _{dim}	-10%	200	+10%	µA	Current flow out of R _{dim+} -Pin
Output Current for Optocoupler	I _{out}	-10%	5	+10%	mA	
PWM frequency	f _{PWM}	-6%	1000	+6%	Hz	

Electrical characteristics and parameters

Table 4 Electrical Characteristics (continued)

Parameter	Symbol	Values			Unit	Note or Test Condition
		Min.	Typ.	Max.		
Dimming accuracy		-3		+3	%	With active dimming incl. all variations
Wake-up Time	t_w			40	μs	Time from $V_{CC} = 11 V$ to first output current
ESD capability HBM	V_{HAB}			1500	V	according to ANSI/ESDA/JEDEC JS-001
ESD capability CDM	V_{CDM}			500		according to JESD22 C101
