# HV Series, Radial, Conformally Coated, 500 - 10,000 VDC (Industrial Grade) 

a YAGEO company

## Overview

KEMET's High Voltage HV Series radial conformally coated ceramic capacitors are designed with COG and X7R dielectrics which feature a $125^{\circ} \mathrm{C}$ maximum operating temperature. These devices are ideal for high voltage power supplies, DC/DC conversion and well suited for timing, resonant, bypass, and decoupling applications.

These high voltage capacitors are widely used in industries related to semiconductors, telecommunications, test/ diagnostic equipment and power/grid.

## Benefits

- Operating temperature range of $-55^{\circ} \mathrm{C}$ to $+125^{\circ} \mathrm{C}$
- High shock and vibration capability
- Capacitance range from $150 \mathrm{pF}-5.6 \mu \mathrm{~F}$ in X7R
- Capacitance range from $10 \mathrm{pF}-0.39 \mu \mathrm{~F}$ in C0G
- DC voltage ratings of $500 \mathrm{~V}, 1 \mathrm{kV}, 2 \mathrm{kV}, 3 \mathrm{kV}, 4 \mathrm{kV}$, 5 kV, $7.5 \mathrm{kV}, 10 \mathrm{kV}$
- High thermal stability
- Encapsulation meets flammability standard UL 94 V-0

## Applications

- Switch mode power supplies
- DC/DC Converters
- Lighting ballast
- Measuring equipment
- Inverters
- Telecom equipment
- High voltage coupling

## Ordering Information

${ }^{1}$ Additional capacitance tolerance offerings may be available. Contact KEMET for details.
${ }^{2}$ Please refer to the Construction section in the datasheet.

## Dimensions - Inches (Millimeters)

## Environmental Compliance

RoHS exemptions 7a \& 7c-II apply to HV series parts that have nickel barrier layer leads.
All other parts are Not RoHS Compliant.

## Electrical Parameters/Characteristics

| Item | Parameters/Characteristics |
| :---: | :---: |
| Operating Temperature Range: | $-55^{\circ} \mathrm{C}$ to $+125^{\circ} \mathrm{C}$ |
| Capacitance Change with Reference to $+25^{\circ} \mathrm{C}$ and 0 VDC Applied (TCC): | $\begin{aligned} & \text { X7R: } \pm 15 \% \\ & \text { C0G: } \pm 30 \text { PPM } /{ }^{\circ} \mathrm{C} \end{aligned}$ |
| Aging Rate (Maximum \% Cap Loss/Decade Hour): | X7R: 2.0\%/decade hour C0G: 0\% |
| ${ }^{1}$ Dielectric Withstanding Voltage: | $150 \%$ of rated voltage for voltage rating of $500 \mathrm{~V} \leq \mathrm{V}<1,000 \mathrm{~V}$ $120 \%$ of rated voltage for voltage rating of $\geq 1,000 \mathrm{~V}$ <br> ( $5 \pm 1$ seconds and charge/discharge not exceeding 50 mA at $25^{\circ} \mathrm{C}$ ) |
| ${ }^{2}$ Dissipation Factor (DF) Maximum Limit at $25^{\circ} \mathrm{C}$ : | $\begin{aligned} & \text { X7R: } 2.0 \% \\ & \text { C0G: } 0.15 \% \end{aligned}$ |
| ${ }^{3}$ Insulation Resistance (IR) Limit at $25^{\circ} \mathrm{C}$ : | $1,000 \mathrm{M} \Omega$ microfarads or $100 \mathrm{G} \Omega$ <br> (Rated voltage applied for $120 \pm 5$ seconds) |

${ }^{1}$ DWV is the voltage a capacitor can withstand (survive) for a short period of time.
It exceeds the nominal and continuous working voltage of the capacitor.
${ }^{2}$ See part number specification sheet for frequency and voltage for Capacitance, Dissipation Factor and TCC measurement conditions.
${ }^{3}$ To obtain IR limit, divide M $\Omega-\mu F$ value by the capacitance and compare to G limit. Select the lower of the two limits.
Note: When measuring capacitance, it is important to ensure the set voltage level is held constant. The HP4284 and Agilent E4980 have a feature known as Automatic Level Control (ALC). The ALC feature should be switched to "ON."

## Post Environmental Limits

| Dielectric | Rated DC Voltage | Capacitance Value | DF (\%) | Capacitance Shift | IR |
| :---: | :---: | :---: | :---: | :---: | :---: |
| COG | All | All | 0.25 | $0.3 \%$ or $\pm 0.50 \mathrm{pF}$ | $10 \%$ of Initial Limit |
| X7R | All | All | 3.0 | $\pm 20 \%$ | $10 \%$ of Initial Limit |

## Soldering Process

## Recommended Soldering Technique:

- Solder Wave
- Hand Soldering (Manual)

## Recommended Soldering Profile:

- Optimum Wave Solder Profile

## Soldering Process cont.

- Hand Soldering (Manual)

## Manual Solder Profile with Pre-heating

Soldering

KEMET recommends following the guidelines and techniques outlined in technical bulletins F2103 and F9207.

Table 2 - Performance \& Reliability: Test Methods and Conditions

| Stress | Reference | Test or Inspection Method |
| :---: | :---: | :---: |
| Solderability | J-STD-002 | Method A at $235^{\circ} \mathrm{C}$, category 3 |
| Temperature Cycling | $\begin{gathered} \text { JESD22 } \\ \text { Method JA-104 } \\ \hline \end{gathered}$ | 50 cycles $\left(-55^{\circ} \mathrm{C}\right.$ to $\left.220^{\circ} \mathrm{C}\right)$, measurement at $24 \pm 4$ hours after test conclusion. 30 minutes maximum dwell time at each temperature extreme. 8 minutes maximum transition time. |
| Biased Humidity | $\begin{aligned} & \text { MIL-STD-202 } \\ & \text { Method } 103 \end{aligned}$ | Load humidity: 1,000 hours $85^{\circ} \mathrm{C} / 85 \% \mathrm{RH}$ and rated voltage. Add $100 \mathrm{k} \Omega$ resistor. Measurement at 24 hours $\pm 4$ hours after test conclusion. |
|  |  | Low volt humidity: 1,000 hours $85^{\circ} \mathrm{C} / 85 \% \mathrm{RH}$ and 1.5 V . Add $100 \mathrm{k} \Omega$ resistor. Measurement at 24 hours $\pm 4$ hours after test conclusion. |
| Immersion | $\begin{aligned} & \text { MIL-STD-202 } \\ & \text { Method } 104 \end{aligned}$ | Test condition B |
| Storage Life | MIL-STD-202 <br> Method 108 | Unpowered 1,000 hours at $200^{\circ} \mathrm{C}$. Measurement at 24 hours $\pm 4$ hours after test conclusion. IR Measurement at $150^{\circ} \mathrm{C}$ |
| High Temperature Life | $\begin{aligned} & \text { MIL-STD-202 } \\ & \text { Method } 108 \end{aligned}$ | 1,000 hours at $200^{\circ} \mathrm{C}$ with rated voltage applied. |
| High Temperature Lead Pull | KEMET Internal | Peel to Failure: $4 \mathrm{lbs}(1.84 \mathrm{~kg})$ minimum |
| Vibration | $\begin{gathered} \text { MIL-STD-202 } \\ \text { Method } 204 \end{gathered}$ | 5 g for 20 minutes, 12 cycles each of 3 orientations. Note: Use 8" X 5" PCB. 031" thick 7 secure points on one long side and 2 secure points at corners of opposite sides. Parts mounted within $2^{\prime \prime}$ from any secure point. Test from $10-2000 \mathrm{~Hz}$. |
| Resistance to Soldering Heat | $\begin{aligned} & \text { MIL-STD-202 } \\ & \text { Method } 210 \end{aligned}$ | Test Condition B, Solder dip. Note: no preheat of samples. |
| Terminal Strength | MIL-STD-202 <br> Method 211 | Test Condition A. 454 g for $5-10$ seconds; Bend test at 227 g , 3 bends |
| Mechanical Shock | $\begin{gathered} \text { MIL-STD-202 } \\ \text { Method } 213 \end{gathered}$ | Test Condition C. Figure 1 of Method 213. |
| Resistance to Solvents | $\begin{gathered} \text { MIL-STD-202 } \\ \text { Method } 215 \\ \hline \end{gathered}$ | Add aqueous wash chemical - OKEM Clean or equivalent. |

## Storage \& Handling

The un-mounted storage life of a leaded ceramic capacitor is dependent upon storage and atmospheric conditions as well as packaging materials. While the ceramic chips enveloped under the epoxy coating themselves are quite robust in most environments, solderability of the wire lead on the final epoxy-coated product will be degraded by exposure to high temperatures, high humidity, corrosive atmospheres, and long term storage. In addition, packaging materials will be degraded by high temperature and exposure to direct sunlight-reels may soften or warp, and tape peel force may increase.

KEMET recommends storing the un-mounted capacitors in their original packaging, in a location away from direct sunlight, and where the temperature and relative humidity do not exceed 40 degrees centigrade and $70 \%$ respectively. For optimum solderability, capacitor stock should be used promptly, preferably within 18 months of receipt. For applications requiring pre-tinning of components, storage life may be extended if solderability is verified. Before cleaning, bonding or molding these devices, it is important to verify that your process does not affect product quality and performance. KEMET recommends testing and evaluating the performance of a cleaned, bonded or molded product prior to implementing and/or qualifying any of these processes.

## Disclaimer

All product specifications, statements, information and data (collectively, the "Information") in this datasheet are subject to change. The customer is responsible for checking and verifying the extent to which the Information contained in this publication is applicable to an order at the time the order is placed. All Information given herein is believed to be accurate and reliable, but it is presented without guarantee, warranty, or responsibility of any kind, expressed or implied.

Statements of suitability for certain applications are based on KEMET Electronics Corporation's ("KEMET") knowledge of typical operating conditions for such applications, but are not intended to constitute - and KEMET specifically disclaims - any warranty concerning suitability for a specific customer application or use. The Information is intended for use only by customers who have the requisite experience and capability to determine the correct products for their application. Any technical advice inferred from this Information or otherwise provided by KEMET with reference to the use of KEMET's products is given gratis, and KEMET assumes no obligation or liability for the advice given or results obtained.

Although KEMET designs and manufactures its products to the most stringent quality and safety standards, given the current state of the art, isolated component failures may still occur. Accordingly, customer applications which require a high degree of reliability or safety should employ suitable designs or other safeguards (such as installation of protective circuitry or redundancies) in order to ensure that the failure of an electrical component does not result in a risk of personal injury or property damage.

Although all product-related warnings, cautions and notes must be observed, the customer should not assume that all safety measures are indicted or that other measures may not be required.
