R71H, 125°C Single Metallized Polypropylene Film, Radial, SMPS PFC Applications

Overview

The R71H is constructed of metallized polypropylene film with radial leads of tinned wire. The radial leads are electrically welded to the metal layer on the ends of the capacitor winding. The capacitor is encapsulated in a self-extinguishing solvent resistant plastic case with thermosetting resin material meeting UL 94 V-0 requirements.

Automotive grade devices meet the demanding Automotive Electronics Council's AEC-Q200 qualification requirements.

Applications

Typical applications include power factor correction applications.

Not suitable for across-the-line application (see Suppressor Capacitors).

Benefits

Voltage range: 450 – 630 VDC
 Capacitance range: 0.033 – 22 μF

• Lead Spacing: 10 - 27.5 mm

• Capacitance tolerance: ±10%, ±20%, ±5% (on request)

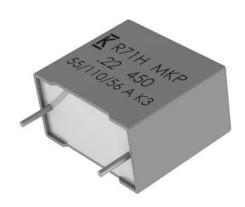

Climatic category: 55/110/56 IEC 60068-1

Operating temperature range of -55°C to +125°C

· RoHS compliance and lead-free terminations

• Tape & Reel packaging in accordance with IEC 60286-2

Self-healing

^{*} Typical value

Performance Characteristics cont.

 T_h is the maximum ambient temperature surrounding the capacitor or hottest contact point (e.g. tracks), whichever is higher, in the worst operation conditions in ${}^{\circ}$ C.

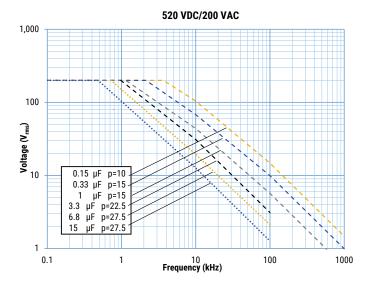

Qualification

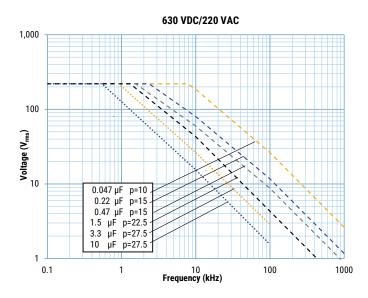

Automotive Grade products meet or exceed the requirements outlined by the Automotive Electronics Council. Details regarding test methods and conditions are referenced in document AEC-Q200, Stress Test Qualification for Passive Components. For additional information regarding the Automotive Electronics Council and AEC-Q200, please visit their website at www.aecouncil.com.

⁽⁴⁾ K = 10%, $M = \pm 20\%$ (only available tolerance)

Soldering Process

The implementation of the RoHS directive has resulted in the selection of SnAgCu (SAC) alloys or SnCu alloys as primary solder. This has increased the liquidus temperature from that of 183°C for SnPb eutectic alloy to 217 – 221°C for the new alloys. As a result, the heat stress to the components, even in wave soldering, has increased considerably due to higher pre-heat and wave temperatures. Polypropylene capacitors are especially sensitive to heat (the melting point of polypropylene is 160 – 170°C). Wave soldering can be destructive, especially for mechanically small polypropylene capacitors (with lead spacing of 5 mm to 15 mm), and great care has to be taken during soldering. The recommended solder profiles from KEMET should be used. Please consult KEMET with any questions. In general, the wave soldering curve from IEC Publication 61760–1 Edition 2 serves as a solid quideline for successful soldering. Please see Figure 1.

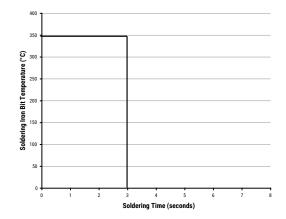

Reflow soldering is not recommended for through-hole film capacitors. Exposing capacitors to a soldering profile in excess of the above recommended limits may result in degradation or permanent damage to the capacitors.

Do not place the polypropylene capacitor through an adhesive curing oven to cure resin for surface mount components. Insert through-hole parts after the curing of surface mount parts. Consult KEMET to discuss the actual temperature profile in the oven, if through-hole components must pass through the adhesive curing process. A maximum two soldering cycles is recommended. Please allow time for the capacitor surface temperature to return to a normal temperature before the second soldering cycle.

Manual Soldering Recommendations

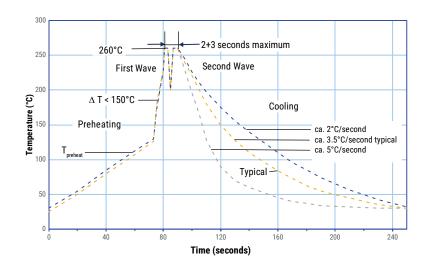

Following is the recommendation for manual soldering with a soldering iron.

Recommended Soldering Temperature

The soldering iron tip temperature should be set at 350°C (+10°C maximum) with the soldering duration not to exceed more than 3 seconds.

Wave Soldering Recommendations

Soldering Process cont.

Wave Soldering Recommendations cont.

1. The table indicates the maximum set-up temperature of the soldering process

Figure 1

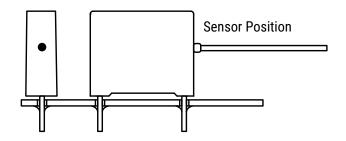

| | | mum heat | | mum oldering | | |
|--|-------------------------------|-------------------------------|-------------------------------|-------------------------------|--|--|
| Film | Tempe | erature | Temperature | | | |
| Material | Capacitor Pitch ≤ 15 mm | Capacitor Pitch > 15 mm | Capacitor Pitch ≤ 15 mm | Capacitor Pitch > 15 mm | | |
| Single Metallized HT Polypropylene | 125°C | 130°C | 260°C | 270°C | | |

2. The maximum temperature measured on the capacitor body:

Set the temperature so that the maximum temperature is below the limit:

| Film Material | Maximum Temperature Measured on the Capacitor Body |
|------------------------------------|--|
| Single Metallized Polypropylene | 120°C (for series R71H) |

Duration: < 60 seconds

Selective Soldering Recommendations

Selective dip soldering is a variation of reflow soldering. In this method, the printed circuit board with through-hole components to be soldered is preheated and transported over the solder bath as in normal flow soldering without touching the solder. When the board is over the bath, it is stopped and pre-designed solder pots are lifted from the bath with molten solder only at the places of the selected components, and pressed against the lower surface of the board to solder the components.

The temperature profile for selective soldering is similar to the double wave flow soldering outlined in this document, however, instead of two baths, there is only one bath with a time from 3 to 10 seconds. In selective soldering, the risk of overheating is greater than in double wave flow soldering, and great care must be taken so that the parts are not overheated.

Mounting

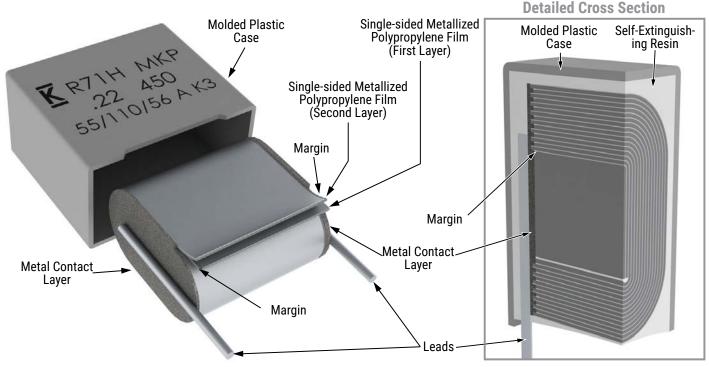

Resistance to Vibration and Mechanical Shock

AEC-Q200 Mechanical Stress Tests:

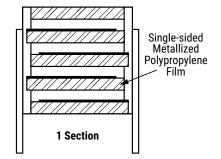

| Mechanical Shock | MIL-SDT-202 Method 213 | Test condition C Peak value 100 g, duration 6 ms, half-sine-wave (see MIL-HDBK for details) |
|------------------|------------------------|--|
| Vibration | MIL-SDT-202 Method 204 | 5 g for 20 minutes, 12 cycles each of 3 orientations Use 8"X5" PCB, 0.031" thick. 7 secure points on one 8" side and 2 secure points at corners of opposite sides. Parts mounted within 2" from any secure point. Test from 10 – 2,000 Hz. |

The capacitors are designed for PCB mounting. The stand-off pipes must be in good contact with the printed circuit board. The capacitors with pitch ≤ 22.5 mm can be mechanically fixed by the leads, for pitch > 22.5 mm, the capacitor body has to be properly fixed (e.g. clamped or glued).

Lead Taping & Packaging (IEC 60286-2)

Taping Specification

| Description | Symbol | Dimensions (mm) | | | | |
|--------------------------------------|---------------------|-----------------|-----------|-------|-------|-----------|
| | | Lead Spacing | | | | Toloronoo |
| | | 10.0 | 15.0 | 22.5 | 27.5 | Tolerance |
| Lead wire diameter | d | 0.6 | 0.6 - 0.8 | 0.8 | 0.8 | ±0.05 |
| Taping lead space | Р | 25.4 | 25.4 | 38.1 | 38.1 | ±1 |
| Feed hole lead space * | P ₀ | 12.7 | 12.7 | 12.7 | 12.7 | ±0.2 ** |
| Centering of the lead wire | P ₁ | 7.7 | 5.2 | 7.8 | 5.3 | ±0.7 |
| Centering of the body | P ₂ | 12.7 | 12.7 | 19.05 | 19.05 | ±1.3 |
| Lead spacing *** | F | 10.0 | 15.0 | 22.5 | 27.5 | +0.6/-0.1 |
| Component alignment | Δh | 0 | 0 | 0 | 0 | ±2 |
| Component deviation | Δр | 0 | 0 | 0 | 0 | ±1 |
| Height of component from tape center | H ₀ **** | 18.5 | 18.5 | 18.5 | 18.5 | ±0.5 |
| Carrier tape width | W | 18 | 18 | 18 | 18 | +1/-0.5 |
| Hold down tape width | W _o | 9 | 10 | 10 | 10 | Minimum |
| Hole position | W ₁ | 9 | 9 | 9 | 9 | ±0.5 |
| Hold down tape position | W ₂ | 3 | 3 | 3 | 3 | Maximum |
| Feed hole diameter | D ₀ | 4 | 4 | 4 | 4 | ±0.2 |
| Total tape thickness | t | 0.7 | 0.7 | 0.7 | 0.7 | ±0.2 |

^{*} Available also 15 mm.

^{**} Maximum 1 mm on 20 lead spacing.

^{*** 15} mm and 10 mm taped to 7.5 mm (crimped leads) available upon request.

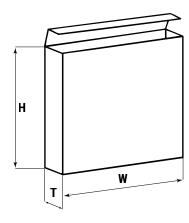

^{****} H_0 = 16.5 mm is available upon request.

Lead Taping & Packaging (IEC 60286-2) cont.

Disclaimer

All product specifications, statements, information and data (collectively, the "Information") in this datasheet are subject to change. The customer is responsible for checking and verifying the extent to which the Information contained in this publication is applicable to an order at the time the order is placed. All Information given herein is believed to be accurate and reliable, but it is presented without guarantee, warranty, or responsibility of any kind, expressed or implied.

Statements of suitability for certain applications are based on KEMET Electronics Corporation's ("KEMET") knowledge of typical operating conditions for such applications, but are not intended to constitute – and KEMET specifically disclaims – any warranty concerning suitability for a specific customer application or use. The Information is intended for use only by customers who have the requisite experience and capability to determine the correct products for their application. Any technical advice inferred from this Information or otherwise provided by KEMET with reference to the use of KEMET's products is given gratis, and KEMET assumes no obligation or liability for the advice given or results obtained.

Although KEMET designs and manufactures its products to the most stringent quality and safety standards, given the current state of the art, isolated component failures may still occur. Accordingly, customer applications which require a high degree of reliability or safety should employ suitable designs or other safeguards (such as installation of protective circuitry or redundancies) in order to ensure that the failure of an electrical component does not result in a risk of personal injury or property damage.

Although all product-related warnings, cautions and notes must be observed, the customer should not assume that all safety measures are indicted or that other measures may not be required.
