

650 V, 8 A high surge silicon carbide power Schottky diode

Features

- No reverse recovery charge in application current range
- Switching behavior independent of temperature
- High forward surge capability
- Insulated package TO-220AC Ins:
 - Insulated voltage: 2500 V_{RMS}
 - Typical package capacitance: 7 pF
- Power efficient product
- ECOPACK®2 compliant component

Applications

- Switch mode power supply
- PFC
- DCDC converters
- LLC topologies
- Boost diode

Description

This 8 A, 650 V SiC diode is an ultrahigh performance power Schottky diode. It is manufactured using a silicon carbide substrate. The wide band gap material allows the design of a Schottky diode structure with a 650 V rating. Due to the Schottky construction, no recovery is shown at turn-off and ringing patterns are negligible. The minimal capacitive turn-off behavior is independent of temperature.

This [STPSC8H065](#) is especially suited for use in PFC applications. This ST SiC diode will boost the performance in hard switching conditions. Its high forward surge capability ensures a good robustness during transient phases.
