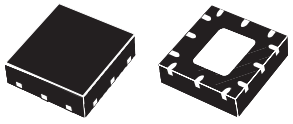
ST2S06

Dual synchronous rectification with reset or inhibit, 0.5 A, 1.5 MHz adjustable step-down switching regulator

Datasheet - production data



QFN12L (4 x 4 mm)

Features

- Step-down current mode PWM (1.5 MHz) DC-DC converter
- Fixed or adjustable output voltage from 0.8 V
- 2% DC output voltage tolerance
- Synchronous rectification
- Reset function for A version
- Inhibit function for B version
- Internal soft start for startup current limitation and power ON delay of 50-100 µs
- Typical efficiency: > 90%
- 0.5 A output current capability
- Non-switching quiescent current: max 1.2 mA over temperature range
- $R_{DS(ON)}$ 150 mΩ (typ.)
- Uses tiny capacitors and inductors
- Available in QFN12L (4x4 mm)

Description

The ST2S06A33 and ST2S06B are dual step-down DC-DC converters optimized for powering low-voltage digital cores in ODD applications and, generally, to replace high current linear solutions when the power dissipation may cause high heating of the application environment. It provides up to 0.5 A over an input voltage range of 2.5 V to 5.5 V.

A high switching frequency of 1.5 MHz allows the use of tiny surface-mount components as well as a resistor divider to set the output voltage value. Only an inductor and two capacitors are required. A low output ripple is guaranteed by the current mode PWM topology and the utilization of low ESR SMD ceramic capacitors. The devices are thermally protected and current-limited to prevent damage due to accidental short-circuit. The ST2S06A33 and ST2S06B are available in the QFN12L (4x4 mm) package.

Figure 2. Pin connections (top view)

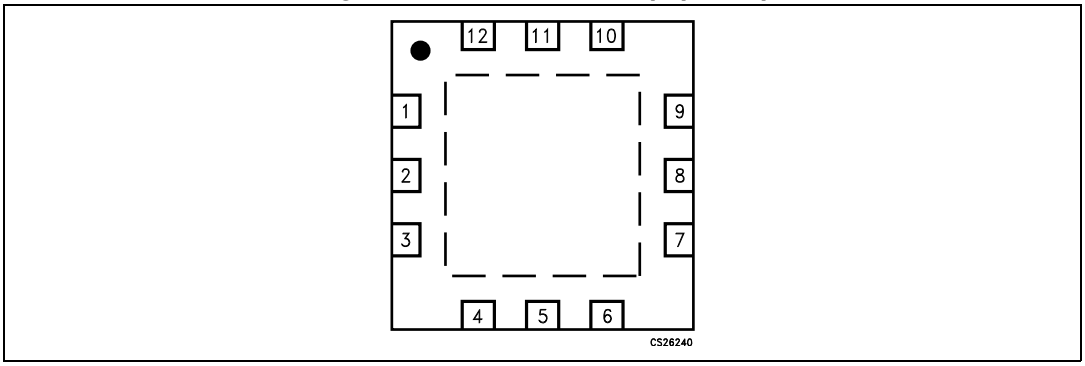

Table 2. Pin description

Pin n°	ST2S06A33	ST2S06B	Name and function
1	HV	HV	Programing pin. It must be floating or connected to GND.
2	FB2	FB2	Feedback voltage
3	GND2	GND2	Power ground
4	SW2	SW2	Switching pin
5	VIN_SW	VIN_SW	Power input voltage pin
6	SW1	SW1	Switching pin
7	GND1	GND1	Power ground
8	FB1/OUT1	FB1	Feedback voltage / output voltage
9	Reset_out	NC	Reset out pin
10	NC	INH	Inhibit pin
11	VIN_A	VIN_A	Supply for analog circuit
12	GND_A	GND_A	System ground

3 Maximum ratings

Table 3. Absolute maximum ratings

Symbol	Parameter	Value	Unit
V_{IN_SW}	Positive power supply voltage	-0.3 to 7	V
V_{IN_A}	Positive power supply voltage	-0.3 to 7	V
V_{INH}	Inhibit voltage	-0.3 to 7	V
SWITCH voltage	Max. voltage of output pin	-0.3 to 7	V
$V_{FB1,2}/V_{O1}$	Feedback voltage/output voltage	-0.3 to 2.5	V
V_{O1}	Output voltage (for V_O > 1.6 V)	-0.3 to 5	V
Current into VFB pin	Common mode input voltage	+1 to -1	mA
T_J	Max junction temperature	150	°C
T_{STG}	Storage temperature range	-65 to +150	°C
T_{LEAD}	Lead temperature (soldering) 10 sec.	300	°C

Note: Absolute maximum ratings are those values beyond which damage to the device may occur. Functional operation under these conditions is not implied.

Table 4. Thermal data

Symbol	Parameter	Value	Unit
R_{thJC}	Thermal resistance junction-case	10	°C/W
R_{thJA}	Thermal resistance junction-ambient	60	°C/W

Table 5. ESD performance

Symbol	Parameter	Test conditions	Value	Unit
ESD	ESD protection voltage	HBM-DH11C	4	kV

4 Electrical characteristics

$V_{IN\_SW} = V_{IN\_A} = 5$ V, $V_{01} = 3.3$ V, $V_{O2} = 1.2$ V, $C_1 = 4.7$ µF, $C_2 = C_3 = 22$ µF, L1 = L2 = 3.3 µH, T_J = - 30 to 125 °C unless otherwise specified. Typical values are referred to 25 °C.

Table 6. Electrical characteristics for the ST2S06A33

Symbol	Parameter	Test conditions	Min.	Typ.	Max.	Unit
OUT_1	Output feedback pin		3.23	3.3	3.37	V
FB_2	Feedback voltage		784	800	816	mV
I_{O1}	I_{O1} pin bias current	V_O = 3.5 V		15	20	µA
I_{FB2}	V_{FB} pin bias current	V_{FB} = 1 V			600	nA
I_Q	Quiescent current	V_{FB} = 1 V			1.2	mA
$I_{O1,2}$	Output current	V_{IN} = 4 to 5.5 V (1)		0.8		A
I_{MIN}	Minimum output current		1			mA
$\%V_{O1,2}/\Delta V_{IN}$	Reference line regulation	4V < V_{IN} < 5.5 V		0.032		$\%V_O/V_{IN}$
$\Delta V_{O1,2}$	Reference load regulation	10mA < I_O < 0.5 A		5.5	15	mV
PWM f_S	PWM switching frequency(1)	V_{FB} = 0.7 V, T_A = 25°C	1.2	1.5	1.8	MHz
D_{MAX}	Maximum duty cycle	V_{FB} = 0.7 V, T_A = 25°C	85	94		%
I_{SWL}	Switching current limitation		1	1.2		A
I_{LKN}	NMOS leakage current	V_{FB} = 0.9 V, T_A = 25°C		0.1		µA
I_{LKP}	PMOS leakage current	V_{FB} = 0.9 V, T_A = 25°C		0.1		µA
R_{DSon}-N	NMOS switch on resistance	I_{SW} = 250 mA		0.15	0.3	W
R_{DSon}-P	PMOS switch on resistance	I_{SW} = 250 mA		0.2	0.4	W
η	Efficiency	I_O = 20 mA to 100 mA		75		%
		I_O = 100 mA to 0.5 A		90		%
T_{SHDN}	Thermal shut down (2)		130	150		°C
T_{HYS}	Thermal shut down hysteresis (2)			15		°C
$\Delta V_{O1,2}/\Delta I_O$	Load transient response (2)	100 mA < I_O < 500 mA $t_R = t_F$ => 100 ns, T_A = 25°C	-5		+5	$\%V_O$
Reset section						
t_{DEL}	Delay time	T_A = 25°C	80	85		ms
V_{RES}	Reset in threshold measured on input pin	V_{IN_A} Rising	4.5	4.6	4.75	V
		V_{IN_A} Falling	4.12	4.2	4.28	

1. V_O = 90% of nominal value.
2. Guaranteed by design, but not tested in production.

V_{IN_SW} = V_{IN_A} = 5 V, $V_{O1,2}$ =1.2 V, C_1= 4.7 µF, C_2 = C_3 = 22 µF, L1 = L2 = 3.3 µH, T_J = -30 to 125 °C unless otherwise specified. Typical values are referred to 25 °C.

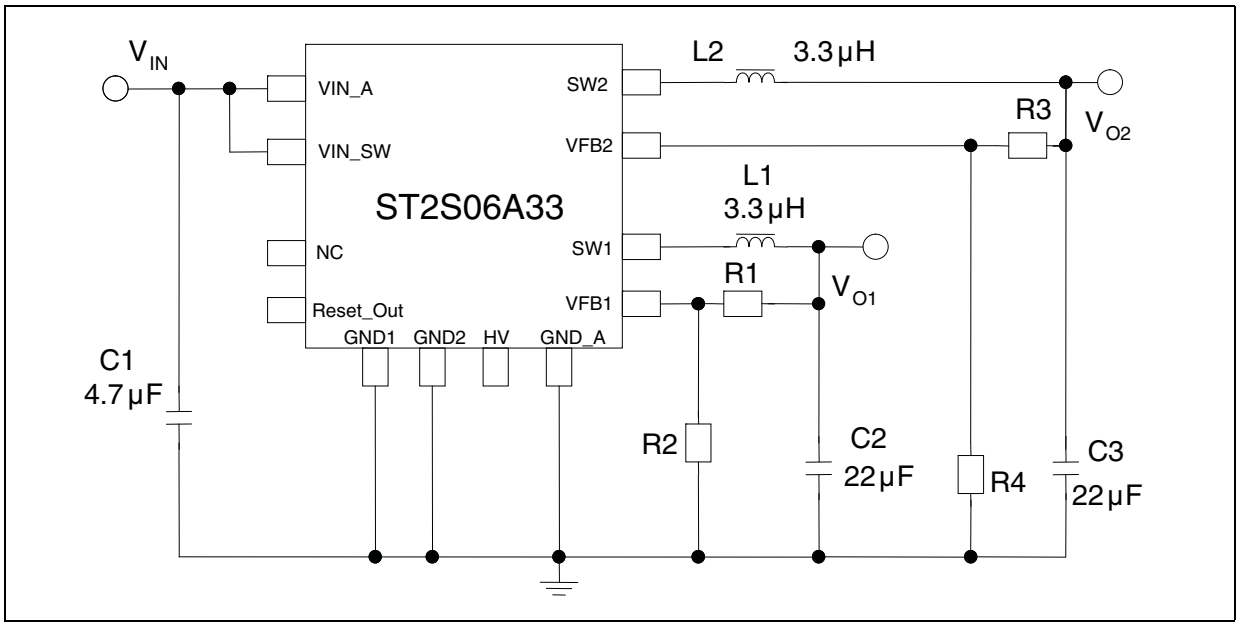

Figure 22. Application circuit for ST2S06B

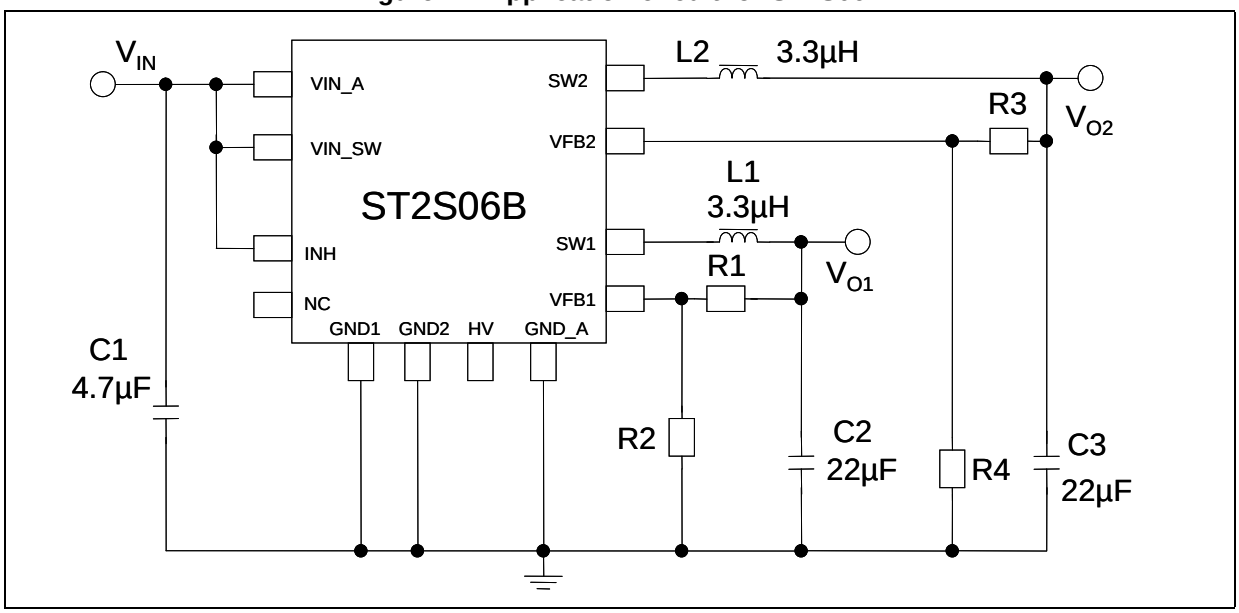

7 Application information

The ST2S06A33 and ST2S06B represent a series of dual adjustable current mode PWM step-down DC-DC converters with an internal 0.5 A power switch, packaged in a QFN12L (4x4 mm).

It is a complete 0.5 A switching regulator with internal compensation that eliminates the need for additional components.

The constant frequency, current mode, PWM architecture and stable operation with ceramic capacitors results in low, predictable output ripple.

To clamp the error amplifier reference voltage a soft start control block generating a voltage ramp has been implemented. Other circuits fitted to the device protection are the thermal shut-down block, which turns off the regulator when the junction temperature exceeds 150 °C (typ.), and the cycle-by-cycle current limiting that provides protection against shorted outputs.

The output voltage is determined by an external resistor divider, as the ST2S06A33 and ST2S06B are adjustable regulators. The desired value is given by the following equation:

$V_O = V_{FB} [1+R1/R2]$

Operation of the device requires few components: 2 inductors, 3 capacitors and a resistor divider. The chosen inductor must be capable of not saturating at the peak current level. Its value should be selected keeping in mind that a large inductor value increases the efficiency at low output current and reduces output voltage ripple, while a smaller inductor can be chosen when it is important to reduce package size and total application cost. Finally, the ST2S06A33 and ST2S06B have been designed to work properly with X5R or X7R SMD ceramic capacitors both at the input and at the output. These types of capacitors, due to their very low series resistance (ESR), minimize the output voltage ripple. Other low ESR capacitors can be used according to the need of the application without compromising the correct functionality of the device. Due to the high switching frequency and peak current, it is important to optimize the application environment by reducing the length of the PCB traces and placing all the external components near the device.
