# PHE820M Series Metallized Polyester Film, Class X2, 275 VAC

### **Overview**

The PHE820M Series is constructed of series winding of metallized polyester encapsulated in self-extinguishing material meeting the requirements of UL 94 V–0.

### **Applications**

Typical applications include worldwide use in electromagnetic interference suppression in all X2 and across-the-line applications.

### **Benefits**

· Approvals: ENEC, UL, cUL

Rated voltage: 275 VAC 50/60 Hz
 Capacitance range: 0.01 – 2.2 μF

Lead spacing: 15.0 – 37.5 mm

• Capacitance tolerance: ±20%, ±10%, ±5% on request

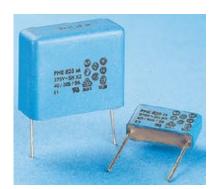

Climatic category: 40/100/56, IEC 60068–1

• Tape and reel in accordance with IEC 60286-2

· RoHS Compliant and lead-free terminations

Operating temperature range of -40°C to +100°C

• 100% screening factory test at 2,150 VDC

### **Soldering Process**

The implementation of the RoHS Directive has required the use of SnAuCu (SAC) or SnCu alloys as primary solder. These alloys require a higher liquidus temperature (217°C – 221°C) as compared to SnPb eutectic alloy (183°C). Due to the higher pre-heat and wave temperatures, the heat stress to components has increased considerably. Polypropylene capacitors are especially sensitive to soldering temperature due to the relatively low melting point of polypropylene material (160°C – 170°C). As a result, wave soldering can be destructive, especially to mechanically small polypropylene capacitors with lead spacings of 5 – 10 mm. For more information, please refer to KEMET's Recommended Soldering Profiles or contact a KEMET representative. IEC Publication 61760–1 Edition 2 may also be consulted for general guidelines.

Any technical advice inferred from this Information or otherwise provided by KEMET with reference to the use of KEMET's products is given gratis, and KEMET assumes no obligation or liability for the advice given or results obtained.

Although KEMET designs and manufactures its products to the most stringent quality and safety standards, given the current state of the art, isolated component failures may still occur. Accordingly, customer applications which require a high degree of reliability or safety should employ suitable designs or other safeguards (such as installation of protective circuitry or redundancies) in order to ensure that the failure of an electrical component does not result in a risk of personal injury or property damage.

Although all product—related warnings, cautions and notes must be observed, the customer should not assume that all safety measures are indicted or that other measures may not be required.
