Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore (\_), the underscore (\_) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (\_). Please check the ON Semiconductor website to verify the updated device numbers. The most current and up-to-date ordering information can be found at [www.onsemi.com](http://www.onsemi.com). Please email any questions regarding the system integration to [Fairchild\\_questions@onsemi.com](mailto:Fairchild_questions@onsemi.com).

# FAN6292BMX/FAN6292MX

## Compact Secondary-Side Synchronous Rectifier Control with USB Type-C Control

FAN6292BMX/FAN6292MX are highly integrated, secondary-side power adaptor controllers compatible with Type-C control. Internally adopted synchronous rectifier control helps for less BOM counts as well as easy design.

FAN6292BMX/FAN6292MX are also a source only USB Type-C controllers which are optimized for mobile chargers and power adapters. It supports standard 3 A VBUS current level. N-Channel MOSFET is compatible as a load switch, and helps to reduce BOM cost.

FAN6292BMX/FAN6292MX incorporate adaptive output under-voltage protection to improve system reliability.

### Features

- Type-C Control for Standard 3 A VBUS Current
- N-Channel MOSFET Control as a Type-C Load Switch
- Internal Synchronous Rectifier Control Circuit
- Protections for Safe Operation; Output Under-Voltage-Protection

### Typical Applications

- Battery Chargers for Smart Phones, Feature Phones, and Tablet PCs
- AC-DC Adapters for Portable Devices that Require CV/CC Control

Figure 3 FAN6292BMX/FAN6292MX Function Block Diagram

**PIN FUNCTION DESCRIPTION**

Pin No.	Pin Name	Description
1	CC2	<b>Configuration Channel 2.</b> This pin is used to detect connections of Type-C cables and connectors. It is tied to the USB Type-C CC2.
2	BLD / AUX	<b>Bleeder and AUX function.</b> Discharging path of output capacitor when UFP detachment is acknowledged. In addition, information is delivered to primary to enhance output performance.
3	LGATE	<b>Load Switch Gate.</b> This pin is tied to the gate of the load switch
4	VIN	<b>Input Voltage.</b> This pin is tied to the output of the adaptor to monitor its output voltage and supply internal bias. IC operating current, and MOSFET gate drive current are supplied through this pin.
5	GATE	<b>Gate Drive Output.</b> Totem-pole output to drive the external SR MOSFET.
6	LPC	<b>SR MOSFET Drain Voltage Detection.</b> This pin is used to detect the voltage on the secondary winding during the on time period of the primary MOSFET.
7	GND	<b>Ground.</b>
8	CC1	<b>Configuration Channel 1.</b> This pin is used to detect connections of Type-C cables and connectors. It is tied to the USB Type-C CC1.

**MAXIMUM RATINGS** (Note 1,2,3)

Rating	Symbol	Value	Unit
VIN Pin Input Voltage	V <sub>IN</sub>	20	V
BLD/AUX Pin Input Voltage	V <sub>BLD/AUX</sub>	20	V
LGATE Pin Input Voltage	V <sub>LGATE</sub>	20	V
CC1 Pin Input Voltage	V <sub>CC1</sub>	-0.3 to 6.0	V
CC2 Pin Input Voltage	V <sub>CC2</sub>	-0.3 to 6.0	V
LPC pin input voltage	V <sub>LPC</sub>	-0.3 to 6.5	V
GATE pin input voltage	V <sub>GATE</sub>	-0.3 to 6.0	V
Power Dissipation (T <sub>A</sub> =25°C)	P <sub>D</sub>	850	mW
Operating Junction Temperature	T <sub>J</sub>	-40 to 150	°C
Storage Temperature Range	T <sub>STG</sub>	-40 to 150	°C
Lead Temperature, (Soldering, 10 Seconds)	T <sub>L</sub>	260	°C
Human Body Model, ANSI/ESDA/JEDEC JS-001-2012 (Note 4)	ESD <sub>HBM</sub>	4	kV
Charged Device Model, JESD22-C101 (Note 4)	ESD <sub>CDM</sub>	1.75	kV

1. Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.
2. All voltage values, except differential voltages, are given with respect to the GND pin.
3. Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device.
4. Meets JEDEC standards JS-001-2012 and JESD 22-C101.

**THERMAL CHARACTERISTICS** (Note 5)

Rating	Symbol	Value	Unit
Thermal Characteristics, Thermal Resistance, Junction-to-Air Thermal Reference, Junction-to-Top	R <sub>BJA</sub> R <sub>WJT</sub>	153 22	°C/W

5. T<sub>A</sub>=25°C unless otherwise specified.

**RECOMMENDED OPERATING RANGES** (Note 6)

Rating	Symbol	Min	Max	Unit
VIN Pin Input Voltage	V <sub>IN</sub>	0	6	V
BLD/AUX Pin Input Voltage	V <sub>BLD/AUX</sub>	0	6	V
LGATE Pin Input Voltage	V <sub>LGATE</sub>	0	10	V
CC1 Pin Input Voltage	V <sub>CC1</sub>	0	5.8	V
CC2 Pin Input Voltage	V <sub>CC2</sub>	0	5.8	V
LPC pin input voltage	V <sub>LPC</sub>	0	5	V
GATE pin input voltage	V <sub>GATE</sub>	0	5.5	V

6. Functional operation above the stresses listed in the Recommended Operating Ranges is not implied. Extended exposure to stresses beyond the Recommended Operating Ranges limits may affect device reliability.

## ELECTRICAL CHARACTERISTICS

$V_{IN}=5\text{ V}$ ,  $LPC=1.5\text{ V}$ ,  $LPC\text{ width}=2\text{ }\mu\text{s}$  at  $T_j=-40\sim 125\text{ }^\circ\text{C}$ ,  $F_{LPC}=100\text{ kHz}$ , unless otherwise specified.

Parameter	Test Conditions	Symbol	Min	Typ	Max	Unit
-----------	-----------------	--------	-----	-----	-----	------

### VIN Section

Continuous Operating Voltage <sup>(7)</sup>		$V_{IN-OP}$			6	V
Operating Supply Current	$V_{IN}=5\text{ V}$	$I_{IN-OP-5V}$		8		mA
Green Mode Operating Supply Current	$V_{IN}=5\text{ V}$ , with SR gate $F = 400\text{ Hz}$ CC1/CC2 open circuit	$I_{IN-OP-Green}$	0.5	0.9	1.3	mA

### Internal Bias Section

Turn-On Threshold Voltage	$V_{IN}$ increases	$V_{IN-ON}$	3.0	3.2	3.4	V
Turn-Off Threshold Voltage	$V_{IN}$ decreases	$V_{IN-OFF}$	2.75	2.85	2.95	V

### Green Mode Section (FAN6292BMX)

Green Mode Enable Debounce Time	Non-switching time, when LPC falling	$t_{Green-EN-Debounce}$	54	64	74	$\mu\text{s}$
Number of switching to enter green mode	When switching period > $T_{Green-EN-Debounce}$	$N_{Green-EN-Debounce}$		1		Cycle
Green Mode Disable Debounce Time	Enable after enter green mode, Non-switching time, when LPC falling	$t_{Green-DIS-Debounce}$	54	64	74	$\mu\text{s}$

### Green Mode Section (FAN6292MX)

Green Mode Enable Debounce Time	Non-switching time, when when LPC falling	$t_{Green-EN-Debounce}$	0.4	0.5	0.6	ms
Green Mode Disable Debounce Time	Enable after enter green mode, Non-switching time, when LPC falling	$t_{Green-DIS-Debounce}$	0.2	0.3	0.4	ms
Number of consecutive switching to leave green mode	Independently enable with $T_{Green-DIS-Debounce}$ , when LPC falling	$N_{Green-DIS-Debounce}$		256		Cycles

### Bleeder Section

BLD Pin Sink Current through when bleeding <sup>(7)</sup>	$V_{BLD}=5\text{ V}$	$I_{BLD-Sink}$	90			mA
Maximum Discharging Time when bleeding		$t_{BLD-MAX}$	275	320	365	ms

### AUX Section ( FAN6292BMX )

Output undershoot detection threshold voltage		$V_{IN-AUX}$	4.7	4.8	4.9	V
Internal debounce time to enable $I_{AUX}$ <sup>(7)</sup>	RC filter type	$T_{AUX-Debounce}$			5	$\mu\text{s}$

## APPLICATIONS INFORMATION

### N-channel MOSFET for Load Switch

FAN6292BMX/FAN6292MX implement Type-C block to enable or disable an external load switch. Internally adapted charge pump lets it control N-channel MOSFET as a load switch. It helps system be more cost competitive compared to P-channel MOSFET as a load switch. Since the minimum pumped voltage is  $V_{BUS}+3$  V, it is recommended to use N-channel MOSFET supporting lower gate threshold levels.

### Detail of Load Switch Control

FAN6292BMX/FAN6292MX support output current higher than 1.5 A. In order to meet Type-C specification, 330  $\mu$ A is applied on CC1 pin and CC2 pin. When Rd (5.1 k $\Omega$ ) is attached on either CC1 or CC2, load switch is turned-on after 150 ms debounce time. As soon as load switch is enabled, BC1.2 counter is enabled. To acknowledge detachment, it needs 15 ms (typ.) debounce time. When load switch is turned-off, bleeder is also enabled at the same time.

### Green Mode Operation (for FAN6292BMX)

In order to reduce power consumption at light-load conditions with FAN105B system, FAN6292BMX in green mode will disable LPC internal detection block but SR continuously works at mini on time for FAN105B which is a pure primary side controller to normally regulate output voltage. When  $V_{LPC}$  is smaller than  $V_{LPC-HIGH-L-5V}$  and maintains duration longer than  $t_{Green-EN-Debounce}$ , FAN6292MX enters green mode where current can be reduced to 0.9 mA (typ.). It leaves green mode when  $V_{LPC}$  is larger than  $V_{LPC-HIGH-L-5V}$  and maintains duration shorter than  $t_{Green-DIS-Debounce}$ .

### Green Mode Operation(for FAN6292MX)

In order to reduce power consumption at light-load conditions with FAN602 system, FAN6292MX enters the green mode where some internal blocks are disabled such as Synchronous Rectifier control block. Therefore, the operating current can be largely reduced. It enters Green Mode when  $V_{LPC}$  is smaller than  $V_{LPC-HIGH-L-5V}$  and maintains duration longer than  $t_{Green-EN-Debounce}$ . It leaves green mode when  $V_{LPC}$  is larger than  $V_{LPC-HIGH-L-5V}$  and maintains duration shorter than  $t_{Green-DIS-Debounce}$ .

### Bleeder Function

When the portable device is detached, BUS voltage should be discharged to zero within a short time to meet TypeC specification. FAN6292BMX/ FAN6292MX support bleeding function by turning on S1 for  $T_{BLD-max}$  as shown in Figure 14. The amount of bleeding current through BLD/AUX pin can be controlled by the external resistor  $R_{BLD}$  shown in (1).

$$I_{BLD-RType} = \frac{V_{O\_MAX}}{R_{BLD} + R_{Internal}} \quad (1)$$

### VIN-UVP Protection(for FAN6292BMX)

Since pure primary side controller detects and regulates output voltage only when switching, it is not easy maintaining output voltage when load suddenly increases from light load where switching frequency is slow to heavy load. Therefore, as Figure 15, FAN6292BMX automatically detects output voltage. When output undershoot is acknowledged via VIN pin, BLD/AUX pin pull-down current via S2 switch to inform undershoot status to primary controller via a photo-coupler. Since the pull-down current is limited through S2, the current will not affect to the amount of output current.

Figure 14 BLD/AUX Function Diagram

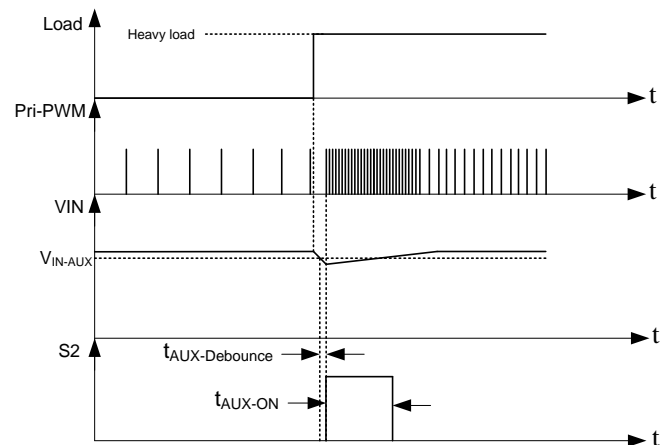

Figure 15 VIN-UVP Protection

ON Semiconductor and  are trademarks of Semiconductor Components Industries, LLC dba ON Semiconductor or its subsidiaries in the United States and/or other countries. ON Semiconductor owns the rights to a number of patents, trademarks, copyrights, trade secrets, and other intellectual property. A listing of ON Semiconductor's product/patent coverage may be accessed at [www.onsemi.com/site/pdf/Patent-Marking.pdf](http://www.onsemi.com/site/pdf/Patent-Marking.pdf). ON Semiconductor reserves the right to make changes without further notice to any products herein. ON Semiconductor makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does ON Semiconductor assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. Buyer is responsible for its products and applications using ON Semiconductor products, including compliance with all laws, regulations and safety requirements or standards, regardless of any support or applications information provided by ON Semiconductor. "Typical" parameters which may be provided in ON Semiconductor data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. ON Semiconductor does not convey any license under its patent rights nor the rights of others. ON Semiconductor products are not designed, intended, or authorized for use as a critical component in life support systems or any FDA Class 3 medical devices or medical devices with a same or similar classification in a foreign jurisdiction or any devices intended for implantation in the human body. Should Buyer purchase or use ON Semiconductor products for any such unintended or unauthorized application, Buyer shall indemnify and hold ON Semiconductor and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that ON Semiconductor was negligent regarding the design or manufacture of the part. ON Semiconductor is an Equal Opportunity/Affirmative Action Employer. This literature is subject to all applicable copyright laws and is not for resale in any manner.
