

### Features

- 3 V, 5 V,  $\pm 5$  V specifications
- 3 dB bandwidth: 90 MHz
- Gain bandwidth product: 70 MHz
- Slew rate: 100 V/ $\mu$ s (typical for 5 V)
- Output current: up to 55 mA
- Input single supply voltage
- Output rail-to-rail
- Specified for 150  $\Omega$  loads
- Low distortion, THD: 0.1 %
- SOT23-5, TSSOP, and SO packages

### Applications

- Video buffers
- ADC driver
- Hi-fi applications

### Description

The TSH7x series offers single, dual, triple, and quad operational amplifiers featuring high video performances with large bandwidth, low distortion, and excellent supply voltage rejection. Running with a single supply voltage from 3 V to 12 V, these amplifiers feature a large output voltage swing and high output current capable of driving standard 150  $\Omega$  loads. A low operating voltage makes TSH7x amplifiers ideal for use in portable equipment. The TSH71, TSH73, and TSH75 also feature standby inputs, each of which allows the op-amp to be put into a standby mode with low-power consumption and high-output impedance. This function allows power saving or signal switching/multiplexing for high-speed applications and video applications. To economize both board space and weight, the TSH7x series is proposed in SOT23-5, SO, and TSSOP packages.

# 1 Typical application: video driver

A typical application for the TSH7x family is that of a video driver for driving STi7xxx DAC outputs on 75-ohm lines.

Figure 1 show the benefits of the TSH7x family as single supply drivers.

Figure 1. Benefits of TSH7x family: +3 V or +5 V single supply solution

## 2 Absolute maximum ratings and operating conditions

**Table 1. Absolute maximum ratings (AMR)**

Symbol	Parameter	Value	Unit
$V_{CC}$	Supply Voltage <sup>(1)</sup>	14	V
$V_{id}$	Differential Input Voltage <sup>(2)</sup>	±2	
$V_i$	Input Voltage <sup>(3)</sup>	±6	
$T_{oper}$	Operating Free Air Temperature Range	0 to +70	°C
$T_{stg}$	Storage Temperature	-65 to +150	
$T_j$	Maximum Junction Temperature	150	
$R_{thjc}$	Thermal resistance junction to case <sup>(4)</sup>		°C/W
	SOT23-5	80

	SO16	35	
TSSOP16	35		
$R_{thja}$	Thermal resistance junction to ambient area		
	SOT23-5	250	
	SO8	157	
	TSSOP08	130	
	SO14	125	
	TSSOP14	110	
	SO16	110	
TSSOP16	110		
ESD	Human body model	2	kV

1. All voltages values, except differential voltage are with respect to the network ground terminal
2. Differential voltages are the non-inverting input terminal with respect to the inverting terminal
3. The magnitude of the input and output must never exceed  $V_{CC} + 0.3V$
4. Short-circuits can cause excessive heating

**Table 2. Operating conditions**

Symbol	Parameter	Value	Unit
$V_{CC}$	Supply voltage	3 to 12	V
$V_{IC}$	Common mode input voltage range	$V_{CC}^-$ to $(V_{CC}^+ - 1.1)$	
Standby		$(V_{CC}^-)$ to $(V_{CC}^+)$

 ( $V_{CC} = \pm 5\text{ V}$ , open loop)

**Figure 45. Group delay (gain = 2,  $V_{CC} = \pm 5\text{ V}$**   
 $Z_L = 150\ \Omega // 27\text{ pF}$ ,  $T_{amb} = 25\text{ }^\circ\text{C}$ )

**Figure 46. Third order intermodulation (gain = 2,  $V_{CC} = \pm 5\text{ V}$ ,  $Z_L = 150\ \Omega // 27\text{ pF}$ ,  $T_{amb} = 25\text{ }^\circ\text{C}$ )**

- Note on intermodulation products:  
 The IFR2026 synthesizer generates a two tone signal ( $F_1 = 180\text{ kHz}$ ,  $F_2 = 280\text{ kHz}$ ); each tone has the same amplitude level.  
 The HP3585 spectrum analyzer measures the intermodulation products function of the output voltage. The generator and the spectrum analyzer are phase locked for precision considerations.

## 4 Testing conditions

### 4.1 Layout precautions

To use the TSH7X circuits in the best manner at high frequencies, some precautions have to be taken for power supplies:

- First of all, the implementation of a proper ground plane on both sides of the PCB is mandatory for high-speed circuit applications to provide low inductance and low resistance common return.
- Power supply bypass capacitors (4.7  $\mu$ F and ceramic 100 pF) should be placed as close as possible to the IC pins in order to improve high frequency bypassing and reduce harmonic distortion. The power supply capacitors must be incorporated for both the negative and the positive pins.
- Proper termination of all inputs and outputs must be in accordance with output termination resistors. In this way, the amplifier load is resistive only, and the stability of the amplifier is improved.
- All leads must be wide and as short as possible (especially for op-amp inputs and outputs) in order to decrease parasitic capacitance and inductance.
- For lower gain applications, care should be taken to avoid large feedback resistance ( $> 1 \text{ k}\Omega$ ) in order to reduce the time constant of parasitic capacitances.
- Choose component sizes as small as possible (SMD)
- Finally, on output, the load capacitance must be negligible to maintain good stability. You can put a serial resistance as close as possible to the output pin to minimize capacitance.

## 4.2 Maximum input level

Figure 47. CCIR330 video line

The input level must not exceed the following values:

- Negative peak: must be greater than  $-V_{CC}+400$  mV
- Positive peak value: must be lower than  $+V_{CC}-400$  mV

The electrical characteristics show the influence of the load on this parameter.

## 4.3 Video capabilities

To characterize the differential phase and differential gain, a CCIR330 video line is used.

The video line contains five (flat) levels of luma on which is superimposed a chroma signal. The first level contains no luma. The luma gives various amplitudes which define the saturation of the signal. The chrominance gives various phases which define the color of the signal.

Differential phase (respectively differential gain) distortion is present if a signal chrominance phase (gain) is affected by luminance level. They represent the ability to uniformly process the high frequency information at all luminance levels.

When differential gain is present, color saturation is not correctly reproduced.

The input generator is the Rohde and Schwarz CCVS. The output measurement was made by the Rohde and Schwarz VSA.

Figure 48. Measurement on Rohde and Schwarz VSA

Table 10. Video results

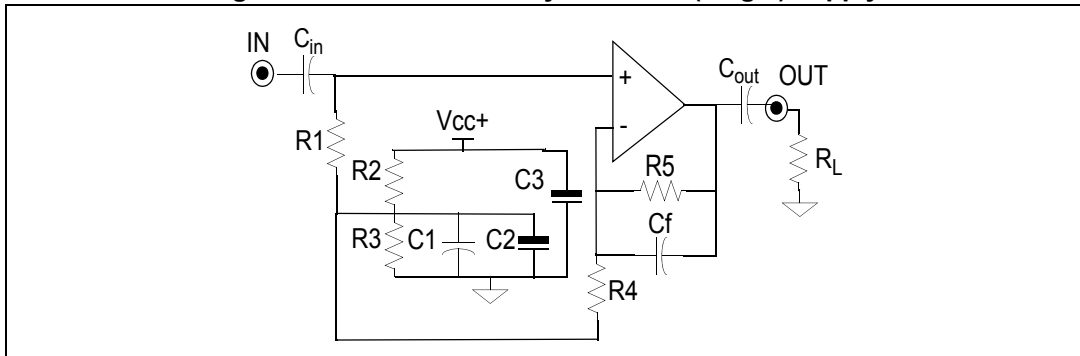

Parameter	Value $V_{CC} = \pm 2.5 V$	Value $V_{CC} = \pm 5 V$	Unit
Lum NL	0.1	0.3	%
Lum NL step 1	100	100	
Lum NL step 2	100	99.9	
Lum NL step 3	99.9	99.8	
Lum NL step 4	99.9	99.9	
Lum NL step 5	99.9	99.7	
Diff gain pos	0	0	
Diff gain neg	-0.7	-0.6

Diff gain step1	-0.5	-0.3	
Diff gain step2	-0.7	-0.6	
Diff gain step3	-0.3	-0.5	
Diff gain step4	-0.1	-0.3	
Diff gain step5	-0.4	-0.5	
Diff phase pos	0	0.1	
Diff phase neg	-0.2	-0.4	
Diff phase pp	0.2	0.5	
Diff phase step1	-0.2	-0.4	
Diff phase step2	-0.1	-0.4	
Diff phase step3	-0.1	-0.3	
Diff phase step4	0	0.1	
Diff phase step5	-0.2	-0.1	

### 4.4 Precautions when operating on an asymmetrical supply

The TSH7X can be used with either a dual or a single supply. If a single supply is used, the inputs are biased to the mid-supply voltage ( $+V_{CC}/2$ ). This bias network must be carefully designed, in order to reject any noise present on the supply rail.

As the bias current is  $15 \mu A$ , you must carefully choose the resistance R1 so as not to introduce an offset mismatch at the amplifier inputs.

**Figure 49. Schematic of asymmetrical (single) supply**

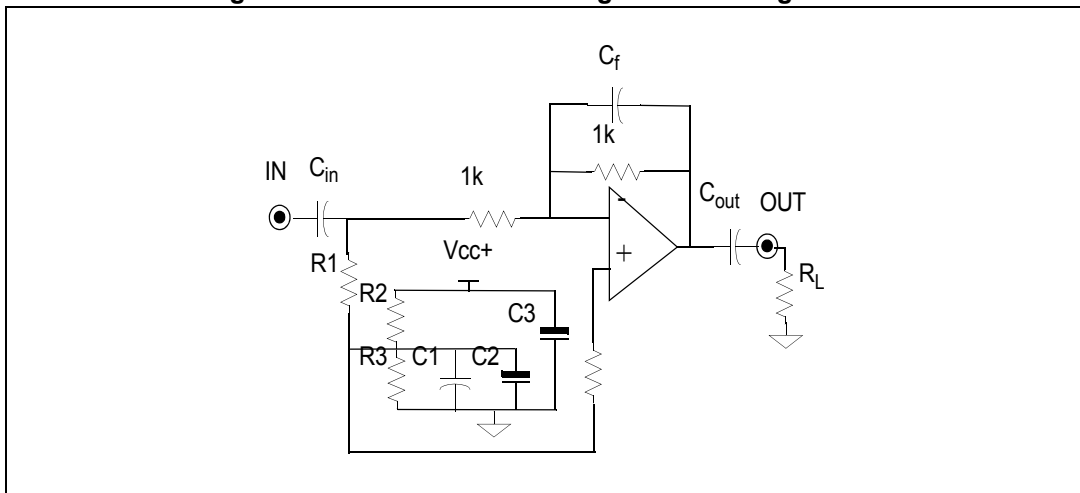

R1 = 10 kΩ is a typical and convenient value. C1, C2, C3 are bypass capacitors that filter perturbations on  $V_{CC}$ , as well as for the input and output signals. We choose C1 = 100 nF and C2 = C3 = 100 μF.

R2, R3 are such that the current through them must be greater than 100 times the bias current. Therefore, we set R2 = R3 = 4.7 kΩ

C<sub>in</sub>, as C<sub>out</sub>, is chosen to filter the DC signal by the low-pass filters (R1, C<sub>in</sub> and R<sub>out</sub>, C<sub>out</sub>). By taking R1 = 10 kΩ, R<sub>L</sub> = 150 Ω, and C<sub>in</sub> = 2 μF, C<sub>out</sub> = 220 μF we provide a cut-off frequency below 10 Hz.

**Figure 50. Use of the TSH7x in gain = -1 configuration**

Some precautions must be taken, especially for low-power supply applications.

A feedback capacitance,  $C_f$ , should be added for better stability. [Table 11](#) summarizes the impact of the capacitance  $C_f$  on the phase margin of the circuit.

**Table 11. Impact capacitance  $C_f$**

Parameter	$C_f$ (pF)	$V_{CC} = \pm 1.5\text{ V}$	$V_{CC} = \pm 2.5\text{ V}$	$V_{CC} = \pm 5\text{ V}$	Unit
Phase margin	0	28	43	56	deg
f-3 dB		40	39.3	38.3	MHz
Phase margin	5.6	30	43	56	deg
f-3 dB		40	39.3	38.3	MHz
Phase margin	22	37	52	67	deg
f-3 dB		37	34	32	MHz
Phase margin	33	48	65	78	deg
f-3 dB		33.7	30.7	27.6	MHz

## 5 Package information

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK<sup>®</sup> packages, depending on their level of environmental compliance. ECOPACK<sup>®</sup> specifications, grade definitions and product status are available at: [www.st.com](http://www.st.com). ECOPACK<sup>®</sup> is an ST trademark.

## 6 Order information

Table 19. Order codes

Part number	Temperature range	Package	Packing	Marking
TSH70CLT	0 °C to 70 °C	SOT23-5	Tape and reel	K301
TSH70CD/CDT		SO8	Tube or tape and reel	70C
TSH71CD/CDT				71C
TSH71CPT		TSSOP8	Tape and reel	72C
TSH72CD/CDT		SO8	Tube or tape and reel	
TSH72CPT		TSSOP8	Tape and reel	73C
TSH73CD/CDT		SO14	Tube or tape and reel	
TSH73CPT		TSSOP14	Tape and reel	74C
TSH74CD/CDT		SO14	Tube or tape and reel	
TSH74CPT		TSSOP14	Tape and reel	75C
TSH75CD/CDT		SO16	Tube or tape and reel	
TSH75CPT		TSSOP16	Tape and reel	

## 7 Revision history

**Table 20. Document revision history**

Date	Revision	Changes
Nov. 2000	1	First Release.
Aug. 2002	2	Limit min. of $I_{\text{sink}}$ from 24mA to 20mA (only on 3V power supply). Reason: yield improvement.
May 2006	3	Improvement of VOL max. at 3V and 5V power supply on 150-ohm load connected to GND (pages 6 and 8). Reason: TSH7x can drive video signals from DACs to lines in single supply (3V or 5V) without any DC level change of the video signals. Grammatical and typographical changes throughout. Package mechanical data updated.
05-Dec-2013	4	Updated slew rate in <a href="#">Features</a> <a href="#">Table 12: SOT23-5 package mechanical data</a> : added information for inches.

**Please Read Carefully:**

Information in this document is provided solely in connection with ST products. STMicroelectronics NV and its subsidiaries ("ST") reserve the right to make changes, corrections, modifications or improvements, to this document, and the products and services described herein at any time, without notice.

All ST products are sold pursuant to ST's terms and conditions of sale.

Purchasers are solely responsible for the choice, selection and use of the ST products and services described herein, and ST assumes no liability whatsoever relating to the choice, selection or use of the ST products and services described herein.

No license, express or implied, by estoppel or otherwise, to any intellectual property rights is granted under this document. If any part of this document refers to any third party products or services it shall not be deemed a license grant by ST for the use of such third party products or services, or any intellectual property contained therein or considered as a warranty covering the use in any manner whatsoever of such third party products or services or any intellectual property contained therein.

**UNLESS OTHERWISE SET FORTH IN ST'S TERMS AND CONDITIONS OF SALE ST DISCLAIMS ANY EXPRESS OR IMPLIED WARRANTY WITH RESPECT TO THE USE AND/OR SALE OF ST PRODUCTS INCLUDING WITHOUT LIMITATION IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE (AND THEIR EQUIVALENTS UNDER THE LAWS OF ANY JURISDICTION), OR INFRINGEMENT OF ANY PATENT, COPYRIGHT OR OTHER INTELLECTUAL PROPERTY RIGHT.**

**ST PRODUCTS ARE NOT DESIGNED OR AUTHORIZED FOR USE IN: (A) SAFETY CRITICAL APPLICATIONS SUCH AS LIFE SUPPORTING, ACTIVE IMPLANTED DEVICES OR SYSTEMS WITH PRODUCT FUNCTIONAL SAFETY REQUIREMENTS; (B) AERONAUTIC APPLICATIONS; (C) AUTOMOTIVE APPLICATIONS OR ENVIRONMENTS, AND/OR (D) AEROSPACE APPLICATIONS OR ENVIRONMENTS. WHERE ST PRODUCTS ARE NOT DESIGNED FOR SUCH USE, THE PURCHASER SHALL USE PRODUCTS AT PURCHASER'S SOLE RISK, EVEN IF ST HAS BEEN INFORMED IN WRITING OF SUCH USAGE, UNLESS A PRODUCT IS EXPRESSLY DESIGNATED BY ST AS BEING INTENDED FOR "AUTOMOTIVE, AUTOMOTIVE SAFETY OR MEDICAL" INDUSTRY DOMAINS ACCORDING TO ST PRODUCT DESIGN SPECIFICATIONS. PRODUCTS FORMALLY ESCC, QML OR JAN QUALIFIED ARE DEEMED SUITABLE FOR USE IN AEROSPACE BY THE CORRESPONDING GOVERNMENTAL AGENCY.**

Resale of ST products with provisions different from the statements and/or technical features set forth in this document shall immediately void any warranty granted by ST for the ST product or service described herein and shall not create or extend in any manner whatsoever, any liability of ST.
