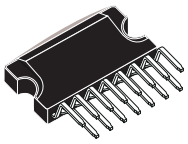
TDA7266SAN

5 W + 5 W dual bridge amplifier

Datasheet – production data

Features

- Wide supply voltage range (3.5 - 13 V)
- Minimum external components
  - No SWR capacitor
  - No bootstrap
  - No Boucherot cells
  - Internally fixed gain
- Standby & mute functions
- Short-circuit protection
- Thermal overload protection



CLIPWATT15

Description

The TDA7266SAN is a dual bridge amplifier specifically designed for LCD monitors, PC motherboards, TVs and portable radio applications.

The device is pin-to-pin compatible with the TDA7266, TDA7266SA, TDA7297SA and TDA7297.

Table 1. Device summary

Part number	Package	Packing
TDA7266SAN	Clipwatt15	Tube

Contents

1 Block diagram and pin connections

Figure 1. Block and application diagram

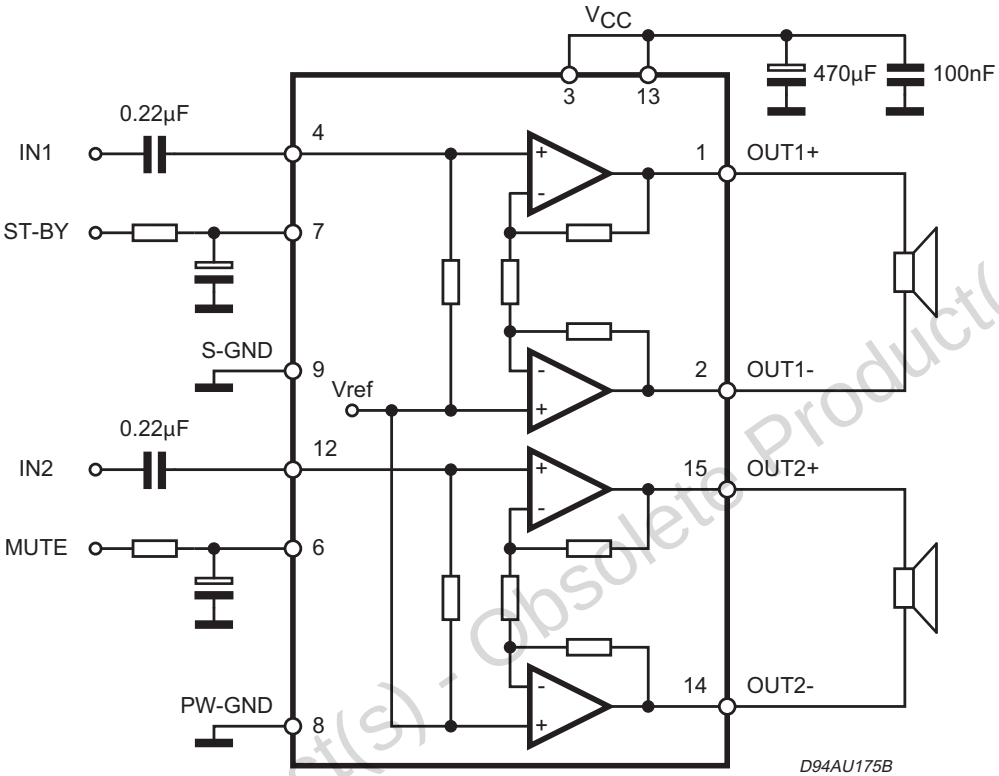


Figure 2. Pin connections (top view)

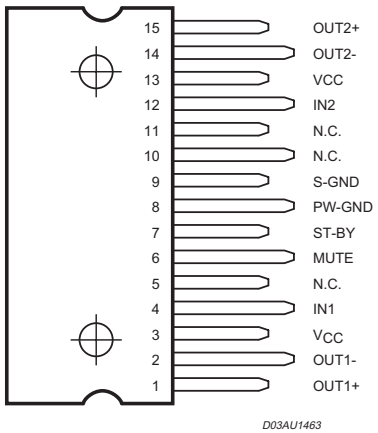

2 Electrical specifications

2.1 Absolute maximum ratings

Table 2. Absolute maximum ratings

Symbol	Parameter	Value	Unit
V_S	Supply voltage	13	V
I_O	Output peak current (internally limited)	2	A
P_{tot}	Total power dissipation (T_{amb} = 70 °C)	15	W
T_{op}	Operating temperature	0 to 70	°C
T_{stg}, T_j	Storage and junction temperature	-40 to 150	°C

2.2 Thermal data

Table 3. Thermal data

Symbol	Parameter	Value	Unit
$R_{th\ j\text{-}case}$	Thermal resistance junction-case	Typ = 1.8; Max = 2.5	°C/W
$R_{th\ j\text{-}amb}$	Thermal resistance junction-ambient	48	°C/W

3 Electrical characteristics

Unless otherwise stated, the values in the table below are given for conditions V_{CC} = 9.5 V, R_L = 8 Ω, f = 1 kHz, T_{amb} = 25 °C.

Table 4. Electrical characteristics

Symbol	Parameter	Test condition	Min.	Typ.	Max	Unit
V_{CC}	Supply range		3	9.5	13	V
I_q	Total quiescent current			50	65	mA
V_{OS}	Output offset voltage				120	mV
P_O	Output power	THD 10%	4.5	5		W
THD	Total harmonic distortion	P_O = 1 W		0.05	0.2	%
		P_O = 0.1 W to 2 W f = 100 Hz to 15 kHz			1	%
SVR	Supply voltage rejection	f = 100 Hz, VR = 0.5 V	40	56		dB
CT	Crosstalk		46	60		dB
A_{MUTE}	Mute attenuation		60	80		dB
T_W	Thermal threshold			150		°C
G_V	Closed loop voltage gain		25	26	27	dB
ΔG_V	Voltage gain matching				0.5	dB
R_i	Input resistance		25	30		kΩ
VT_{MUTE}	Mute threshold	for V_{CC} > 6.4 V; V_O = -30 dB	2.3	2.9	4.1	V
		for V_{CC} < 6.4 V; V_O = -30 dB	V_{CC}/2 - 1	V_{CC}/2 - 0.75	V_{CC}/2 - 0.5	V
VT_{ST-BY}	St-by threshold		0.8	1.3	1.8	V
I_{ST-BY}	St-by current V6 = GND				100	µA
e_N	Total output voltage	A curve; f = 20 Hz to 20 kHz		150		µV

4 Application suggestions

Standby and mute functions

4.1 Microprocessor application

In order to avoid annoying "pop noise" during turn-on/off transients, the correct sequence of the st-by and mute signals must be ensured which is quite simple when using a microprocessor (*Figure 3* and *4*).

First the st-by signal (from the microprocessor) goes high and the voltage across the st-by terminal (pin 7) starts to increase exponentially. The external RC network is intended to turn on slowly the biasing circuits of the amplifier, in order to avoid "pop" and "click" on the outputs.

When this voltage reaches the st-by threshold level, the amplifier is switched on, and the external capacitors in series to the input terminals (C3, C53) start to charge.

The mute signal must be held low until the capacitors are fully charged, in order to avoid that the device goes in play mode causing a loud "pop noise" on the speakers.

A delay of 100 - 200 ms between the st-by and mute signals is suitable for proper operation.

Figure 3. Microprocessor application

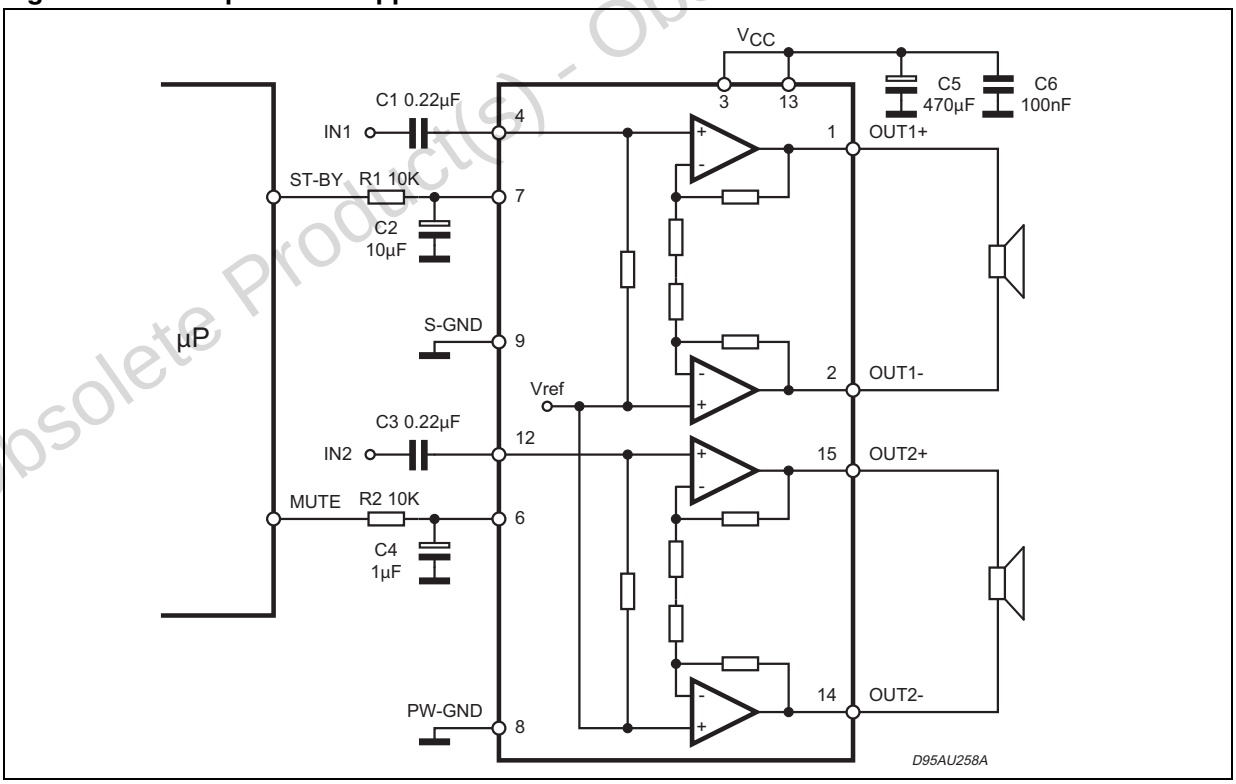

Figure 4. Microprocessor driving signals

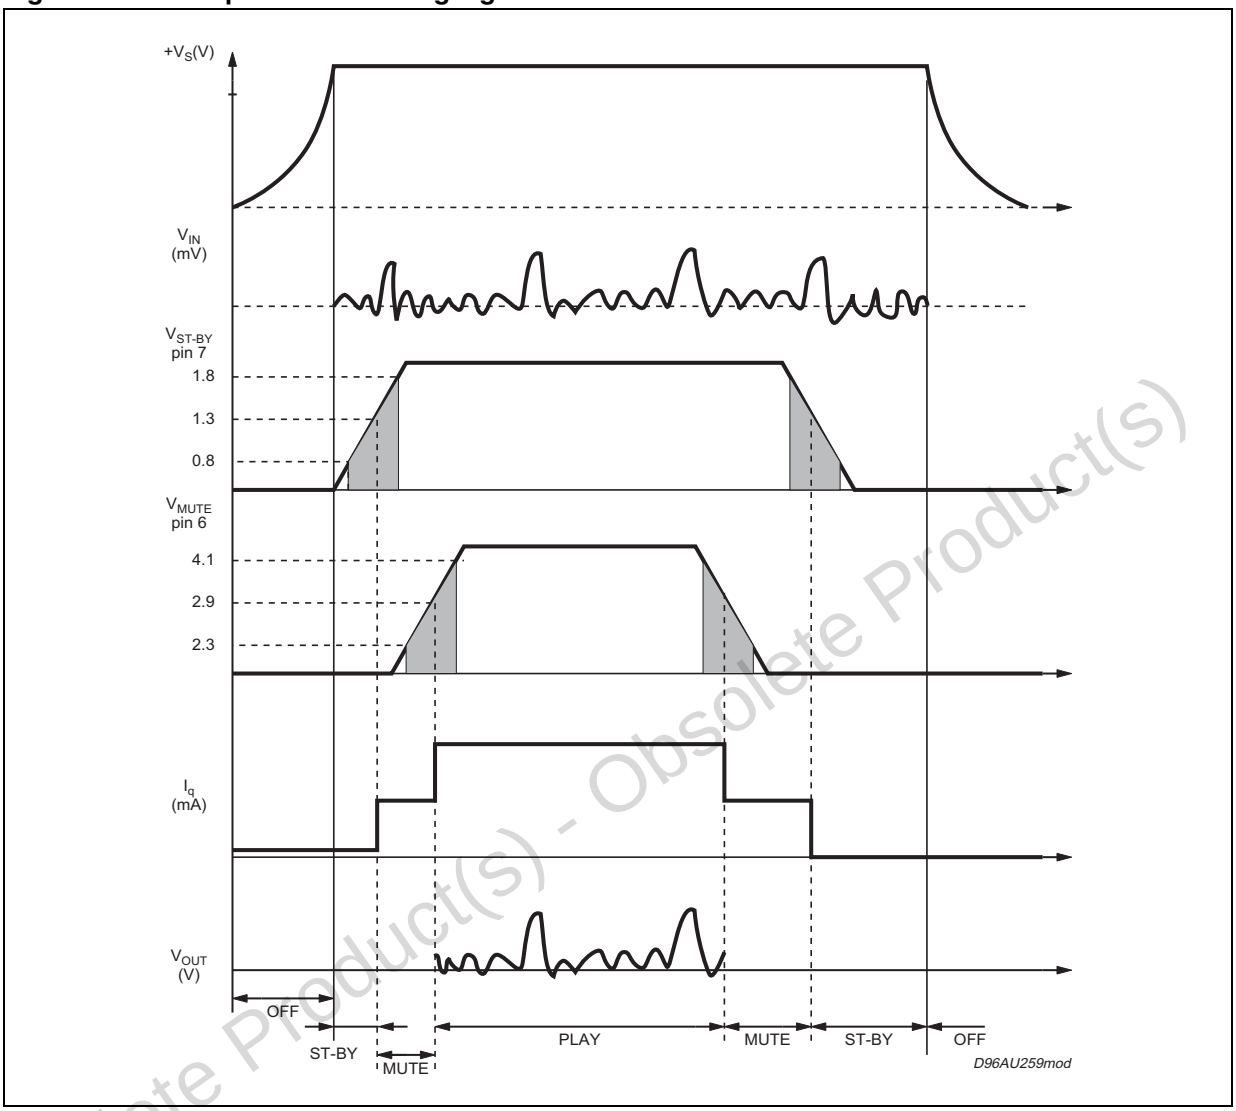

4.2 Low-cost application

In low-cost applications where the microprocessor is not present, the recommended circuit is shown in *Figure 5*.

The st-by and mute terminals are tied together and they are connected to the supply line via an external voltage divider.

The device is switched on/off from the supply line and the external capacitor C4 is used to delay exceeding the st-by and mute threshold in order to avoid "popping" noise.

7 Heatsink dimensioning

In order to avoid triggering the thermal protection which is set approximatively at T_j = 150°C, it is important to correctly dimension the heat sinker R_{Th} (°C/W).

The parameters that influence the dimensioning are:

- Maximum dissipated power for the device (P_{dmax})
- Max. thermal resistance junction to case ($R_{Th\ j\text{-}c}$)
- Max. ambient temperature $T_{amb\ max}$
- Quiescent current I_q (mA)

Example:

V_{CC} = 9.5 V, R_{load} = 8 ohm, $R_{Th\ j\text{-}c}$ = 2.5 °C/W , $T_{amb\ max}$ = 50 °C

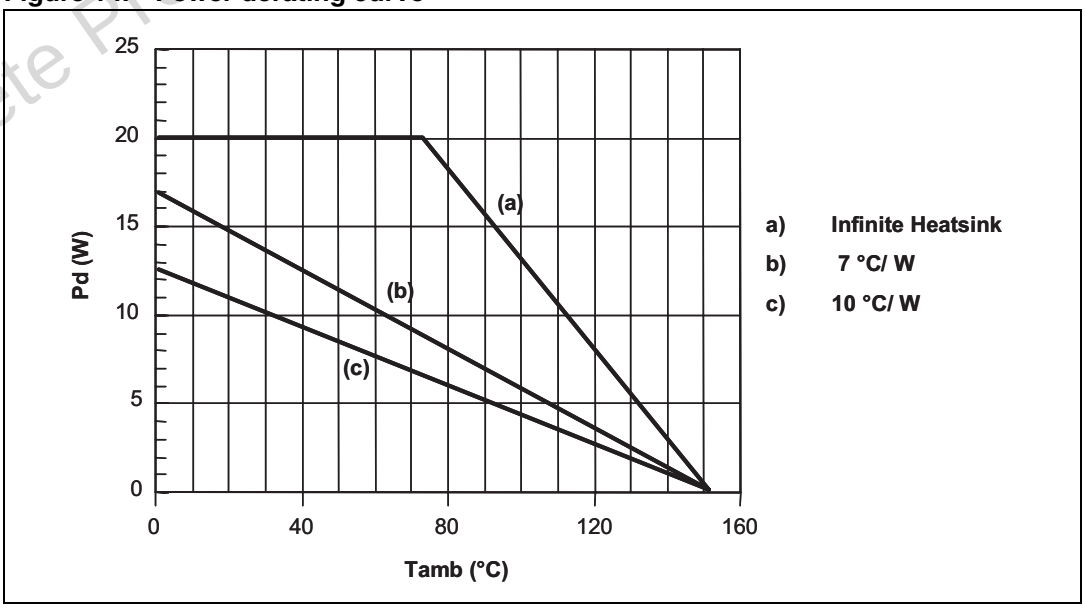
$$P_{dmax} = (N^{o}\text{channels}) \bullet \frac{V_{CC}^{2}}{\Pi^{2} \bullet \frac{R_{load}}{2}} + I_q \bullet V_{CC}$$

$$P_{dmax} = 2 \bullet (2.3) + 0.47 = 5.07\text{W}$$

$$(\text{HeatSinker})R_{Th\ c-a} = \frac{150 - T_{amb\ max}}{P_{dmax}} - R_{Th\ j-c} = \left(\frac{150 - 50}{5.07} - 2.5\right) = 17.2^{o}\text{C/W}$$

Figure 14 shows the power derating curve for the device.

Figure 14. Power derating curve



8 Package mechanical data

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK® packages, depending on their level of environmental compliance. ECOPACK® specifications, grade definitions and product status are available at: *www.st.com*. ECOPACK® is an ST trademark.

Clipwatt assembly suggestions

The recommended mounting method of the Clipwatt on an external heatsink requires the use of a clip placed as close as possible to the center of the plastic body, as indicated in the example of *Figure 15*.

A thermal grease can be used in order to reduce the additional thermal resistance of the contact between the package and heatsink.

A force of 7 - 10 kg gives a good contact and the clip must be designed in order to withstand a maximum contact pressure of 15 kg/mm^2 between itself and the plastic body case.

For example, if a 15 kg force is applied by the clip on the package, the clip must have a contact area of at least 1 mm^2.

Figure 15. Example of right placement of the clip
