**Timing Chart**

Even if power supply and signal at any timing are input, this IC is not destroyed. However, soft start circuit doesn't operate when  $V_{IN}$  (DC) is input at the timing of Figure 11 and 12. Therefore, overcurrent protection circuit will operate, and audio frequency noise from coil may generate. Please turn on ON/OFF or  $V_{CC}$  after  $V_{IN}$ (DC) to avoid this.
