

# NCP1565TELECGEVB: High Efficiency Isolated dc-dc Converters, BRICK TELECOM Evaluation Board

The NCP1565TELECGEVB evaluation board is designed to quickly assess the NCP1565, a highly integrated dual-mode active-clamp PWM controller targeting next-generation high-density, high-performance and small to medium power level isolated dc-dc converters for use in telecom and datacom industries. It can be configured in either voltage mode control with input voltage feed-forward or peak current mode control. For more information please see the datasheet.
