

Features

- STM32F100RBT6B microcontroller, 128 KB Flash memory, 8 KB RAM in 64-pin LQFP
- On-board ST-LINK with selection mode switch to use the kit as a stand-alone ST-LINK (with SWD connector)
- Designed to be powered by USB or an external supply of 5 V or 3.3 V
- Can supply target application with 3 V and 5 V
- Two user LEDs (green and blue)
- One user push-button
- Extension header for all QFP64 I/Os for quick connection to prototyping board or easy probing
- Comprehensive free software including a variety of examples, part of STSW-STM32078 package

Description

The STM32VLDISCOVERY is the cheapest and quickest way to discover STM32F100 Value line microcontrollers. It includes everything required for beginners and experienced users to get started quickly. The STM32VLDISCOVERY discovery kit includes an STM32F100 Value line microcontroller in a 64-pin LQFP and an in-circuit ST-LINK debugger/programmer to debug discovery applications and other target board applications.

Table 1. Device summary

Getting started

The STM32VLDISCOVERY discovery is a low-cost and easy-to-use development kit to quickly evaluate and start a development with an STM32F100 Value line microcontroller.

The ST-LINK programming and debugging tool is integrated on the STM32F100 Value line discovery kit. It is possible to use the STM32VLDISCOVERY as an ST-LINK simply by moving some jumpers. The power supply is provided by a USB connector or an external power supply. The 5V and 3V3 pins can be used independently as input or output power supplies.

To get started immediately using a demonstration application:

1. Connect the STM32F100 Value line discovery board to a PC through an USB cable to power the board.
2. Press the user button B1 (on bottom left corner of the board).
3. Observe how the green LED LD3 blinking changes according to user button B1 clicks.
4. Each click on User button B1 is confirmed by the blue LED LD4.

To study or modify the DISCOVER project related to this simple demo, visit www.st.com/stm32-discovery and download the getting started documentation and STSW-STM32078 (free software examples). This site also contains information on the STM32 features, demonstration software and examples from which you can develop your own applications.

System requirements

- Windows PC (XP, 7, 8)
- USB type A to mini-B cable.

Development toolchain

- IAR Embedded Workbench® for ARM®
- Keil® MDK-ARM™
- GCC-based IDE (ARM® Atollic® TrueSTUDIO®,...).
