EVAL BOARD USER'S MANUAL

Description

The NCV7703 is a fully-protected triple half-bridge driver designed specifically for automotive and industrial motion control applications. The three half-bridge drivers have independent control. This allows for high-side, low side, and H-Bridge control. H-Bridge control provides forward, reverse, brake, and high impedance states.

Driver control is accomplished via a standard Serial Peripheral Interface (SPI).

The Evaluation Board includes both an NCV7703 and NCV8501 5 V regulator. By means of a jumper, the user can select an on-board or external V_{CC} source for the IC. Numerous convenient terminal points are provided to accommodate multiple application configurations.

Features

- Ultra Low Quiescent Current in Sleep Mode
- Three High-Side and Three Low-Side Drivers Connected as Half-Bridges

- Internal Free-wheeling Clamp Diodes
- Configurable as H-Bridge Drivers
- 0.5 A Continuous (1 A peak) Current
- R_{dson} = 0.8 Ω (typ)
- 5 MHz SPI Control with Daisy Chain Capability
- Compliance with 5 V and 3.3 V Systems
- Over Voltage Lockout
- Under Voltage Lockout
- Fault Reporting
- 1.4 A Over Current Threshold Detection with Optional Shutdown
- 3 A Current Limit with Auto Shutdown
- Over Temperature Warning and Protection Levels
- Internally Fused Leads in SON-14 Package

Figure 1. Evaluation Board Photo

Figure 2. Silkscreen Showing Component Positions of the NCV7703GEVB

NCV7703GEVB

Typical connections to the evaluation board are shown in Figure 4. The diagram illustrates half-bridge operation of a motor, and the option for a high-side or low-side load. The load connections are for illustration only and do not limit other possible connections.

The connection of the battery or supply (to VB+) powers the board. V_{CC} for the NCV7703 may be powered by the on-board regulator (powered from VB+) with the 5 V jumper. Remove the 5 V jumper if powering from an external source. LED D1 indicates when 5 V is present (powered on-board or externally).

Notice the SO of the SPI controller connects to the SI of the NCV7703GEVB, and the SO of the NCV7703GEVB connects to the SI of the SPI controller.

The Enable jumper hard wires the Enable pin (EN) to be on. The Enable function may also be provided by the SPI Controller. Disconnect the Enable jumper when providing the signal externally.

Refer to the data sheet for SPI interface functionality.

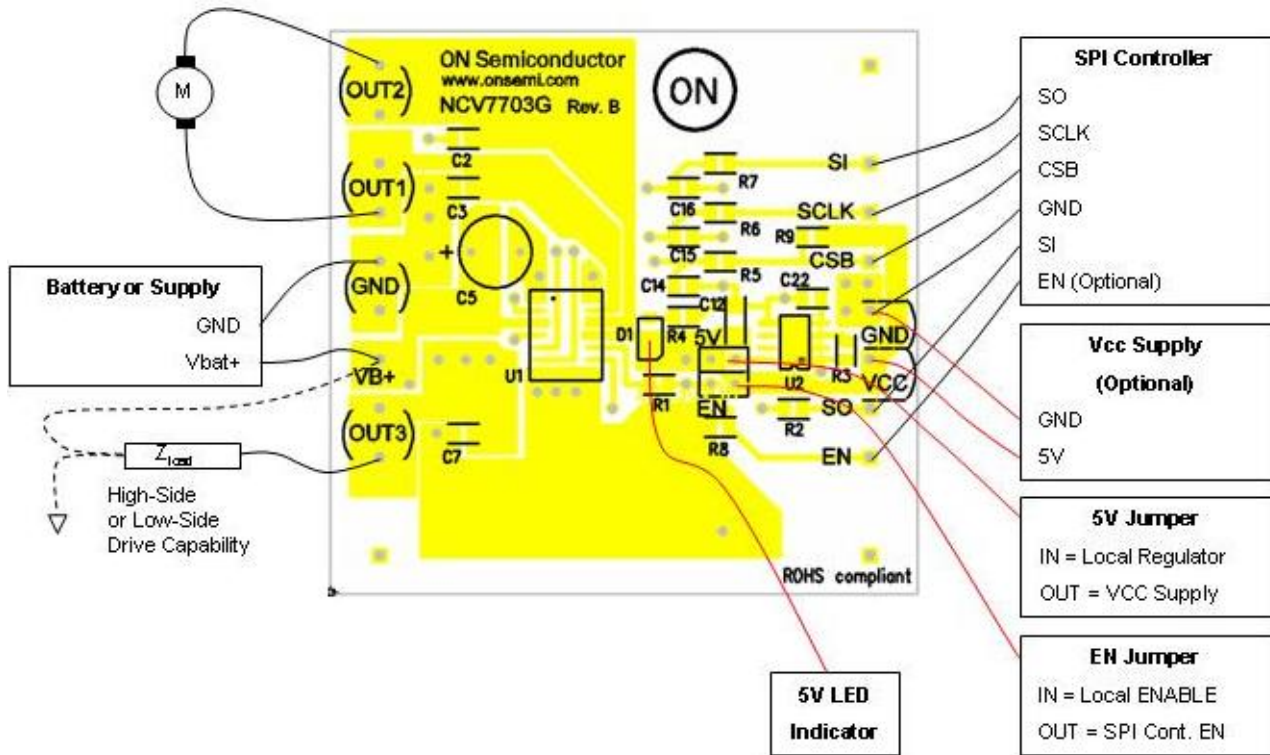

Figure 4. Typical NCV7703 Power Connections

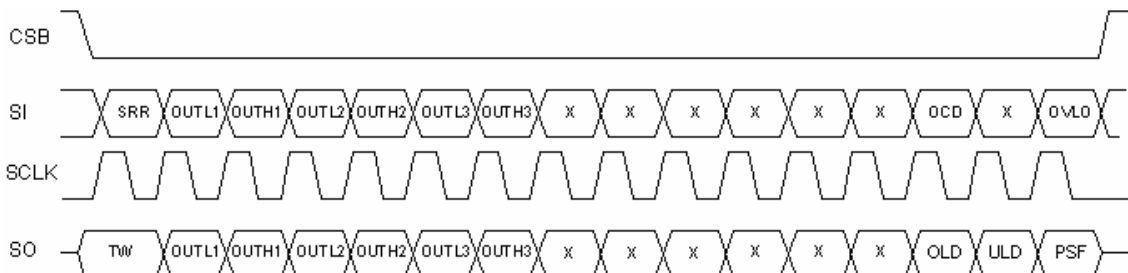

SPI Communication

Standard 16-bit communication has been implemented for the communication of this IC to turn drivers on and off, and to report faults. The LSB (Least Significant Bit) is clocked in first.

Communication is implemented as follows:

1. CSB goes low to allow serial data transfer.
2. A 16 bit word is clocked (SCLK) into the SI (Serial Input) pin.

3. CSB goes high to transfer the clocked in information to the data registers. Note SO is tristate when CSB is high.
4. The SI data will be accepted when a valid SPI frame is detected. A valid SPI frame consists of the above conditions and a complete set of multiples of 16 bit words.

NCV7703GEVB

SPI Communication Frame Format

The table below defines the programming bits and diagnostic bits. Fault information is sequentially clocked out the SO pin of the NCV7703 as programming information is clocked into the SI pin of the device. Daisy

chain communication between SPI compatible IC's is possible by connection of the Serial Output pin (SO) to the input of the sequential IC (SI).

Table 1. PROGRAMMING AND DIAGNOSTIC BITS

Input Data			Output Data		
Bit Number	Bit Description	Bit Status	Bit Number	Bit Description	Bit Status
15	Over Voltage Lock Out Control (OVLO)	0 = Disable	15	Power Supply Fail Signal (PSF for OVLO or UVLO)	0 = No Fault
		1 = Enable			1 = Fault
14	Not Used		14	Under Load Detect Signal (ULD)	0 = No Fault
					1 = Fault
13	Over Current Detection Shut Down Control (OCD)	0 = Disable	13	Over Load Detect Signal (OLD)	0 = No Fault
		1 = Enable			1 = Fault
12	Not Used		12	Not Used	
11	Not Used		11	Not Used	
10	Not Used		10	Not Used	
9	Not Used		9	Not Used	
8	Not Used		8	Not Used	
7	Not Used		7	Not Used	
6	OUTH3	0 = Off	6	OUTH3	0 = Off
		1 = On			1 = On
5	OUTL3	0 = Off	5	OUTL3	0 = Off
		1 = On			1 = On
4	OUTH2	0 = Off	4	OUTH2	0 = Off
		1 = On			1 = On
3	OUTL2	0 = Off	3	OUTL2	0 = Off
		1 = On			1 = On
2	OUTH1	0 = Off	2	OUTH1	0 = Off
		1 = On			1 = On
1	OUTL1	0 = Off	1	OUTL1	0 = Off
		1 = On			1 = On
0	Status Register Reset (SRR)	0 = No Reset	0	Thermal Warning (TW)	0 = Not in TW
		1 = Reset			1 = In TW

Operational Recommendations

Recommended operating voltages for this board are:

$$V_{bat+} = 13.2 \text{ V}$$

$$V_{CC} = 5 \text{ V.}$$

This board is not reverse battery protected. Damage to the board may occur with incorrect connections. The NCV7703 device and C5 (aluminum electrolytic capacitor) are particularly sensitive to reverse battery conditions. See the NCV7703/D datasheet for electrical and environmental testing limits.
