# MM74HC4020 • MM74HC4040 14-Stage Binary Counter • 12-Stage Binary Counter

# **General Description**

The MM74HC4020, MM74HC4040, are high speed binary ripple carry counters. These counters are implemented utilizing advanced silicon-gate CMOS technology to achieve speed performance similar to LS-TTL logic while retaining the low power and high noise immunity of CMOS.

The MM74HC4020 is a 14 stage counter and the MM74HC4040 is a 12-stage counter. Both devices are incremented on the falling edge (negative transition) of the input clock, and all their outputs are reset to a low level by applying a logical high on their reset input.

These devices are pin equivalent to the CD4020 and CD4040 respectively. All inputs are protected from damage due to static discharge by protection diodes to  $V_{CC}$  and ground.

### **Features**

- Typical propagation delay: 16 ns
- Wide operating voltage range: 2-6V
- Low input current: 1 µA maximum
- Low quiescent current: 80 µA maximum (74HC Series)
- Output drive capability: 10 LS-TTL loads

# **Ordering Code:**

Note 4: For a power supply of 5V  $\pm$ 10% the worst case output voltages ( $V_{OH}$ , and  $V_{OL}$ ) occur for HC at 4.5V. Thus the 4.5V values should be used when designing with this supply. Worst case  $V_{IH}$  and  $V_{IL}$  occur at  $V_{CC} = 5.5V$  and 4.5V respectively. (The  $V_{IH}$  value at 5.5V is 3.85V.) The worst case leakage current ( $I_{IN}$ ,  $I_{CC}$ , and  $I_{OZ}$ ) occur for CMOS at the higher voltage and so the 6.0V values should be used.
