## 1-Bit 20 Mb/s Dual-Supply Level Translator

The NLSX4401DFT2G is a 1-bit configurable dual-supply bidirectional auto sensing translator that does not require a directional control pin. The I/O  $V_{CC}$  and I/O  $V_L$  ports are designed to track two different power supply rails,  $V_{CC}$  and  $V_L$  respectively. Both the  $V_{CC}$  and  $V_L$  supply rails are configurable from 1.65 V to 5.5 V. This allows voltage logic signals on the  $V_L$  side to be translated into lower, higher or equal value voltage logic signals on the  $V_{CC}$  side, and vice-versa.

The NLSX4401DFT2G translator has integrated 10 k $\Omega$  pull-up resistors on the I/O lines. The integrated pull-up resistors are used to pull up the I/O lines to either  $V_L$  or  $V_{CC}$ . The NLSX4401 is an excellent match for open-drain applications such as the I<sup>2</sup>C communication bus.

### Features

- $V_L$  can be Less than, Greater than or Equal to  $V_{CC}$
- Wide  $V_{CC}$  Operating Range: 1.65 V to 5.5 V  
Wide  $V_L$  Operating Range: 1.65 V to 5.5 V
- High Speed with 24 Mb/s Guaranteed Data Rate
- Low Bit-to-Bit Skew
- Enable Input and I/O Pins are Overvoltage Tolerant (OVT) to 5.5 V
- Non-preferential Powerup Sequencing
- Partial Power-Off Protection – I/Os at High Impedance with Either Supply at 0 V
- Integrated 10 k $\Omega$  Pull-up Resistors
- Small Space Saving Packages:  
SC-88/SC70-6/SOT-363 Package
- These Devices are Pb-Free and are RoHS Compliant

### Typical Applications

- I<sup>2</sup>C, SMBus, PMBus
- Low Voltage ASIC Level Translation
- Mobile Phones, PDAs, Cameras

### Important Information

- ESD Protection for All Pins  
– Human Body Model (HBM) > 5000 V

## PIN ASSIGNMENT

Pins	Description
V <sub>CC</sub>	V <sub>CC</sub> Supply Voltage
V <sub>L</sub>	V <sub>L</sub> Supply Voltage
GND	Ground
EN	Output Enable, Referenced to V <sub>L</sub>
I/O V <sub>CC</sub>	I/O Port, Referenced to V <sub>CC</sub>
I/O V <sub>L</sub>	I/O Port, Referenced to V <sub>L</sub>

## FUNCTION TABLE

EN	Operating Mode
L	Hi-Z
H	I/O Buses Connected

# NLSX4401DFT2G

## MAXIMUM RATINGS

Symbol	Parameter	Value	Condition	Unit
V <sub>CC</sub>	DC Supply Voltage	-0.5 to +7.0		V
V <sub>L</sub>	DC Supply Voltage	-0.5 to +7.0		V
I/O V <sub>CC</sub>	V <sub>CC</sub> -Referenced DC Input/Output Voltage	-0.5 to +7.0		V
I/O V <sub>L</sub>	V <sub>L</sub> -Referenced DC Input/Output Voltage	-0.5 to +7.0		V
V <sub>EN</sub>	Enable Control Pin DC Input Voltage	-0.5 to +7.0		V
I <sub>I/O_SC</sub>	Short-Circuit Duration (I/O V <sub>L</sub> and I/O V <sub>CC</sub> to GND)	±50	Continuous	mA
I <sub>I/OK</sub>	Input/Output Clamping Current (I/O V <sub>L</sub> and I/O V <sub>CC</sub> )	-50	V <sub>I/O</sub> < 0	mA
T <sub>STG</sub>	Storage Temperature	-65 to +150		°C

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

## RECOMMENDED OPERATING CONDITIONS

Symbol	Parameter	Min	Max	Unit
V <sub>CC</sub>	Positive DC Supply Voltage	1.5	5.5	V
V <sub>L</sub>	Positive DC Supply Voltage	1.5	5.5	V
V <sub>EN</sub>	Enable Control Pin Voltage	GND	5.5	V
V <sub>IO_VCC</sub>	I/O Pin Voltage (Side referred to V <sub>CC</sub> )	GND	5.5	V
V <sub>IO_VL</sub>	I/O Pin Voltage (Side referred to V <sub>L</sub> )	GND	5.5	V
Δt/ΔV	Input Transition Rise and Fall Rate A- or B-Ports, Push-Pull Driving Control Input		10 10	ns/V
T <sub>A</sub>	Operating Temperature Range	-55	+125	°C

Functional operation above the stresses listed in the Recommended Operating Ranges is not implied. Extended exposure to stresses beyond the Recommended Operating Ranges limits may affect device reliability.

$t_{RVCC}$	I/O $V_{CC}$ Rise Time			8	12	ns
------------	------------------------	--	--	---	----	----

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

3. Typical values are for the specified  $V_L$  and  $V_{CC}$  at  $T_A = +25^\circ\text{C}$ . All units are production tested at  $T_A = +25^\circ\text{C}$ .

4. Limits over the operating temperature range are guaranteed by design.

5. Skew is the variation of propagation delay between output signals and applies only to output signals on the same port (I/O\_VLn or I/O\_VCCn) and switching with the same polarity (LOW-to-HIGH or HIGH-to-LOW). Skew is defined by applying a single input to the two input channels and measuring the difference in propagation delays between the output channels.

$t_{PDVL-VCC}$	Propagation Delay (Driving I/O $V_L$ , $V_L$ to $V_{CC}$ )			10	17	ns

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

6. Typical values are for the specified  $V_L$  and  $V_{CC}$  at  $T_A = +25^\circ\text{C}$ . All units are production tested at  $T_A = +25^\circ\text{C}$ .

7. Limits over the operating temperature range are guaranteed by design.

8. Skew is the variation of propagation delay between output signals and applies only to output signals on the same port (I/O\_VLn or I/O\_VCCn) and switching with the same polarity (LOW-to-HIGH or HIGH-to-LOW). Skew is defined by applying a single input to the two input channels and measuring the difference in propagation delays between the output channels.

## APPLICATIONS INFORMATION

### Level Translator Architecture

The NLSX4401 auto sense translator provides bi-directional voltage level shifting to transfer data in multiple supply voltage systems. This device has two supply voltages,  $V_L$  and  $V_{CC}$ , which set the logic levels on the input and output sides of the translator. When used to transfer data from the I/O  $V_L$  to the I/O  $V_{CC}$  ports, input signals referenced to the  $V_L$  supply are translated to output signals with a logic level matched to  $V_{CC}$ . In a similar manner, the I/O  $V_{CC}$  to I/O  $V_L$  translation shifts input signals with a logic level compatible to  $V_{CC}$  to an output signal matched to  $V_L$ .

The NLSX4401 consists of a bi-directional channels that independently determines the direction of the data flow without requiring a directional pin. The one-shot circuits are used to detect the rising input signals. In addition, the one shots decrease the rise time of the output signal for low-to-high transitions.

Each input/output channel has an internal 10 k $\Omega$  pull-up. The magnitude of the pull-up resistors can be reduced by connecting external resistors in parallel to the internal 10 k $\Omega$  resistors.

### Input Driver Requirements

The rise ( $t_R$ ) and fall ( $t_F$ ) timing parameters of the open drain outputs depend on the magnitude of the pull-up resistors. In addition, the propagation times ( $t_{PHL}$  /  $t_{PLH}$ ), skew ( $t_{PSKEW}$ ) and maximum data rate depend on the

impedance of the device that is connected to the translator. The timing parameters listed in the data sheet assume that the output impedance of the drivers connected to the translator is less than 50 k $\Omega$ .

### Enable Input (EN)

The NLSX4401 has an Enable pin (EN) that provides tri-state operation at the I/O pins. Driving the Enable pin to a low logic level minimizes the power consumption of the device and drives the I/O  $V_{CC}$  and I/O  $V_L$  pins to a high impedance state. Normal translation operation occurs when the EN pin is equal to a logic high signal. The EN pin is referenced to the  $V_L$  supply and has Overvoltage Tolerant (OVT) protection.

### Power Supply Guidelines

During normal operation, supply voltage  $V_L$  can be greater than, less than or equal to  $V_{CC}$ . The sequencing of the power supplies will not damage the device during the power up operation.

For optimal performance, 0.01  $\mu$ F to 0.1  $\mu$ F decoupling capacitors should be used on the  $V_{CCA}$  and  $V_{CCB}$  power supply pins. Ceramic capacitors are a good design choice to filter and bypass any noise signals on the voltage lines to the ground plane of the PCB. The noise immunity will be maximized by placing the capacitors as close as possible to the supply and ground pins, along with minimizing the PCB connection traces.

 ISSUE Y

DATE 11 DEC 2012

- NOTES:
1. DIMENSIONING AND TOLERANCING PER ASME Y14.5M, 1994.
  2. CONTROLLING DIMENSION: MILLIMETERS.
  3. DIMENSIONS D AND E1 DO NOT INCLUDE MOLD FLASH, PROTRUSIONS, OR GATE BURRS. MOLD FLASH, PROTRUSIONS, OR GATE BURRS SHALL NOT EXCEED 0.20 PER END.
  4. DIMENSIONS D AND E1 AT THE OUTERMOST EXTREMES OF THE PLASTIC BODY AND DATUM H.
  5. DATUMS A AND B ARE DETERMINED AT DATUM H.
  6. DIMENSIONS b AND c APPLY TO THE FLAT SECTION OF THE LEAD BETWEEN 0.08 AND 0.15 FROM THE TIP.
  7. DIMENSION b DOES NOT INCLUDE DAMBAR PROTRUSION. ALLOWABLE DAMBAR PROTRUSION SHALL BE 0.08 TOTAL IN EXCESS OF DIMENSION b AT MAXIMUM MATERIAL CONDITION. THE DAMBAR CANNOT BE LOCATED ON THE LOWER RADIUS OF THE FOOT.
