## MC10ELT21, MC100ELT21

## 5 V Differential PECL to TTL Translator

## Description

The MC10ELT/100ELT21 is a differential PECL to TTL translator. Because PECL (Positive ECL) levels are used, only +5 V and ground are required. The small outline 8 -lead package and the single gate of the ELT21 makes it ideal for those applications where space, performance and low power are at a premium.

The $\mathrm{V}_{\mathrm{BB}}$ pin, an internally generated voltage supply, is available to this device only. For single-ended input conditions, the unused differential input is connected to $\mathrm{V}_{\mathrm{BB}}$ as a switching reference voltage. $\mathrm{V}_{\mathrm{BB}}$ may also rebias AC coupled inputs. When used, decouple $\mathrm{V}_{\mathrm{BB}}$ and $\mathrm{V}_{\mathrm{CC}}$ via a $0.01 \mu \mathrm{~F}$ capacitor and limit current sourcing or sinking to 0.5 mA . When not used, $\mathrm{V}_{\mathrm{BB}}$ should be left open.

The 100 Series contains temperature compensation.
