### DESCRIPTION

The STP08C596A is a monolithic, medium-voltage, low current power 8-bit shift register designed for LED panel display. The STP08C596A contains a 8-bit serial-in, parallel-out shift register that feeds a 8-bit D-type storage register. In the output stage, sixteen regulated current sources were designed to provide 15-120mA constant current to drive the LEDs.

Compared with the STPIC6C595, the device provides great flexibility and improved performance in LED panel system design.

Trough an external resistor, users may adjust the STP08C596A output current, controlling in this way the light intensity of LEDs.

The STP08C596A guarantees 16V output driving capability, allowing users to connect more LEDs in series. The high clock frequency, 25 MHz, also satisfies the system requirement of high volume data transmission.
