## TinyLogic UHS D-Type Flip-Flop with 3-STATE Output

NC7SZ374

## Description

The NC7SZ374 is a single positive edge-triggered D-type CMOS Flip-Flop with 3-STATE output from onsemi's Ultra High Speed Series of TinyLogic in the space saving SC-88 6-lead package. The device is fabricated with advanced CMOS technology to achieve ultra high speed with high output drive while maintaining low static power dissipation over a very broad $\mathrm{V}_{\mathrm{CC}}$ operating range. The device is specified to operate over the 1.65 V to $5.5 \mathrm{~V} \mathrm{~V}_{\mathrm{CC}}$ range. The inputs and output are high impedance when $\mathrm{V}_{\mathrm{CC}}$ is 0 V . Inputs tolerate voltages up to 5.5 V independent of $\mathrm{V}_{\mathrm{CC}}$ operating voltage. This single flip-flop will store the state of the D input that meets the setup and hold time requirements on the LOW-to-HIGH Clock (CP) transition. The output tolerates voltages above $\mathrm{V}_{\mathrm{CC}}$ in the 3-STATE condition.
