#### **Description**

The FSA839 is a high-performance Single-Pole / Double-Throw (SPDT) analog switch for audio applications driven by low-voltage (1.8 V) baseband processors or ASICs. The device features ultra-low  $R_{\text{ON}}$  of  $0.8\,\Omega$  (maximum) at 4.5 V  $V_{\text{CC}}$  and operates over the wide  $V_{\text{CC}}$  range of 1.65 V to 5.5 V. The device is fabricated with sub-micron CMOS technology to achieve fast switching speeds and is designed for break-before-make operation.

The FSA839 interfaces between the low-voltage ASIC and regular audio amplifiers and CODECs operating up to a 5.5 V supply range. The control circuitry allows for 1.8 V (typical) signals on the control pin (Sel).

#### Notes:

- 2. On resistance is determined by the voltage drop between A and B pins at the indicated current through the switch.
- 3.  $\Delta R_{ON} = R_{ON}$  maximum  $R_{ON}$  minimum; measured at identical  $V_{CC}$ , temperature, and voltage.
- 4. Flatness is defined as the difference between the maximum and minimum value of on resistance over the specified range of conditions.
- 5. Guaranteed by characterization, not production tested for  $V_{CC}$ =1.65 1.95 V.
