MC100LVEP111

2.5V / 3.3V 1:10 Differential ECL/PECL/HSTL Clock Driver

ON Semiconductor®

http://onsemi.com

Description

The MC100LVEP111 is a low skew 1–to–10 differential driver, designed with clock distribution in mind, accepting two clock sources into an input multiplexer. The PECL input signals can be either differential or single–ended (if the V_{BB} output is used). HSTL inputs can be used when the LVEP111 is operating under PECL conditions.

The LVEP111 specifically guarantees low output–to–output skew. Optimal design, layout, and processing minimize skew within a device and from device to device.

To ensure tightest skew, both sides of differential outputs identically terminate into 50 Ω even if only one output is being used. If an output pair is unused, both outputs may be left open (unterminated) without affecting skew.

The MC100LVEP111, as with most other ECL devices, can be operated from a positive V_{CC} supply in PECL mode. This allows the LVEP111 to be used for high performance clock distribution in +3.3 V or +2.5 V systems. Single–ended CLK input operation is limited to a $V_{CC} \geq$ 3.0 V in PECL mode, or $V_{EE} \leq$ –3.0 V in NECL mode when using VBB (See Figure 11). Full operating range is available when using an external voltage reference (See Figure 10). Designers can take advantage of the LVEP111's performance to distribute low skew clocks across the backplane or the board.

Features

- 85 ps Typical Device–to–Device Skew
- 20 ps Typical Output–to–Output Skew
- Jitter Less than 1 ps RMS
- Maximum Frequency > 3 GHz Typical
- V_{BB} Output
- 430 ps Typical Propagation Delay
- The 100 Series Contains Temperature Compensation
- PECL and HSTL Mode Operating Range: V_{CC} = 2.375 V to 3.8 V with V_{EE} = 0 V
- NECL Mode Operating Range: V_{CC} = 0 V with V_{EE} = –2.375 V to –3.8 V
- Open Input Default State
- LVDS Input Compatible
- Fully Compatible with MC100EP111
- Pb–Free Packages are Available

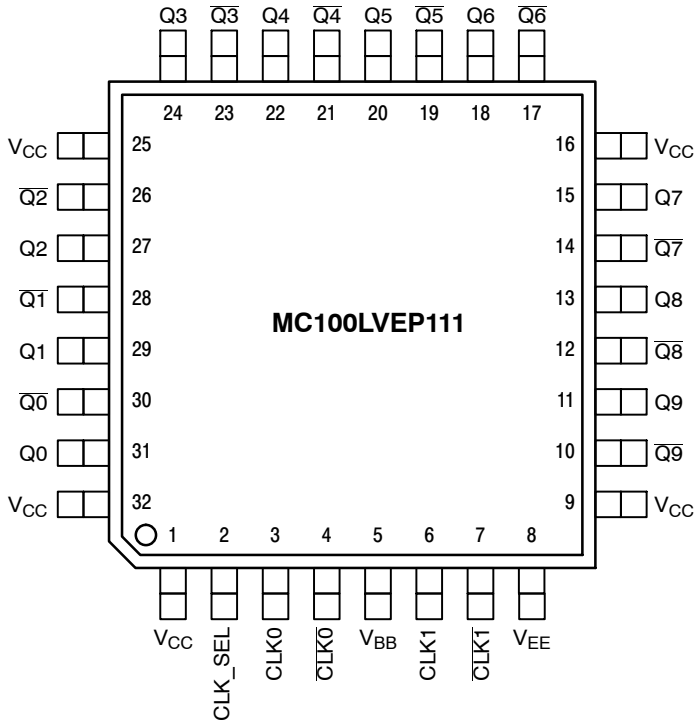
ORDERING INFORMATION

See detailed ordering and shipping information in the package dimensions section on page 10 of this data sheet.



Warning: All V_{CC} and V_{EE} pins must be externally connected to Power Supply to guarantee proper operation.
