Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore (\_), the underscore (\_) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (\_). Please check the ON Semiconductor website to verify the updated device numbers. The most current and up-to-date ordering information can be found at <a href="https://www.onsemi.com">www.onsemi.com</a>. Please email any questions regarding the system integration to <a href="https://www.onsemi.com">Fairchild\_questions@onsemi.com</a>.

# SerDes FIN212AC 12-Bit Serializer / Deserializer Supporting Cameras and Small Displays

#### Features

Data & Control Bits	12-Bit
Frequency	40MHz
Capability	Camera or LCD
Interface	Microcontroller, RGB, YUV
µController Usage	m68 & i86
Selectable Edge Rates	Yes
Standby Current	<10 µA
Core Voltage (V <sub>DDA/S</sub> )	2.5 to 3.6V
I/O Voltage (V <sub>DDP</sub> )	1.65 to 3.6V
ESD (I/O to GND)	14kV
Dookogo	32-Terminal MLP
Package	42-Ball USS-BGA
Ordering Information	FIN212ACMLX
Ordering Information	FIN212ACGFX

### Description

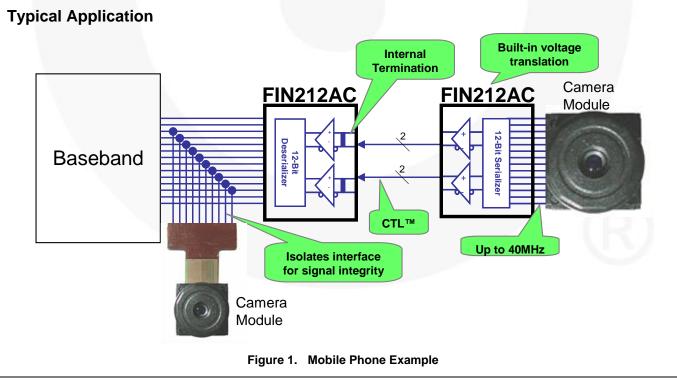

The FIN212AC  $\mu$ SerDes<sup>TM</sup> is a low-power serializer / deserializer optimized for use in cell phone displays and camera paths. The device reduces a 12-bit data path to four wires. For camera applications, an additional master clock can be passed in the opposite direction of data flow. The device utilizes Fairchild's proprietary ultra-low power, low-EMI technology.

#### **Applications**

- Slider, Folder, & Clamshell Mobile Handsets
- Printers
- Security Cameras

#### **Related Resources**

#### Table 2: Deserializer (DIRI=0) Control Pin

µSerDes ™ FIN212AC — 12-Bit Serializer / Deserializer Supporting Cameras and Small Displays

CKP Pulse Width Low Time=(PLL Multiplier * Pwidth Multiplier) / (CKREF*14)	

*Example:* CKREF=26MHz; PLL Multiplier=2; Pwidth Multiplier=13

CKP Pulse width=(2 \* 13) / (26MHz \* 14)=71.4ns

#### (2)

(1)

#### **Power-Down States**

When both S1 and S0 signals are 0, regardless of the state of the DIRI signal, the FIN212AC resets and powers down. The power-down mode shuts down all internal analog circuitry, disables the serial input and output of the device, and resets all internal digital logic. Table 3: Power-Down indicates the state of the input states and output buffers in Power-Down mode.

Signal Pins	DIRI=1 (Serializer)	DIRI=0 (Deserializer)
DP[12:1]	Inputs Disabled	High-Z
СКР	HIGH	High-Z
STROBE	Input Disabled	Input Disabled
CKREF	Input Disabled	Input Disabled
/DIRO	0	1

Table 3: Power-Down

#### **Clock Pass-Through Mode**

Clock pass-through mode allows a harmonic rich clock source to be sent to the serializer in a CTL format to reduce the overall harmonic content of the phone, and can reduce the need for EMI filters. The Master Clock Pass through mode performs a translation to the clock in the CTL link, and does not serialize this signal. The following describes how to enable this functionality for an image sensor (See Figure 6).

Deserializer Configuration (DIRI=0)

- 1. Connect CKREF(BGA pin A6) to GROUND
- 2. Connect master clock to STROBE (BGA pin B5)

Serializer Configuration (DIRI=1)

1. CKSI passes master clock to CKP output (BGA pin C1)

#### **CKREF and STROBE Signals**

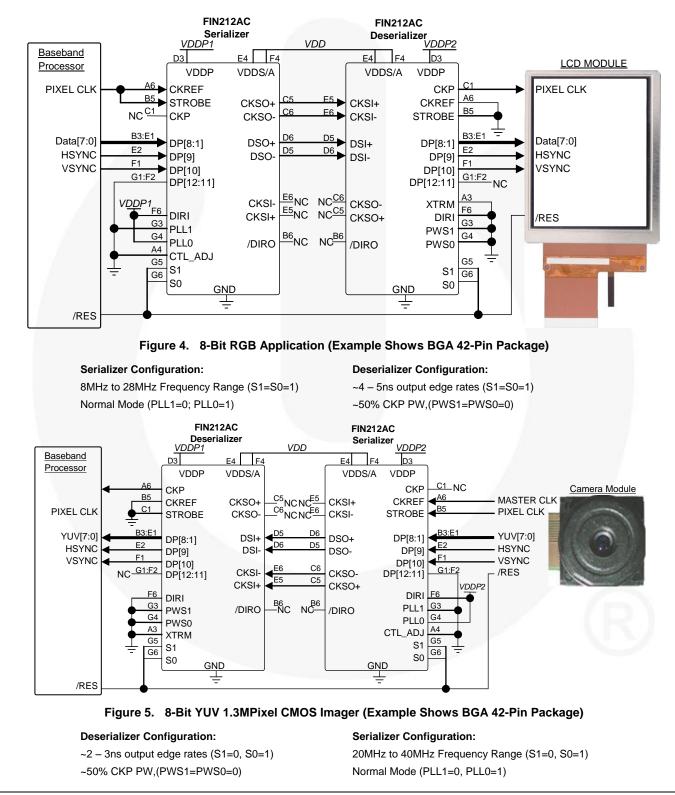

Please note that there is a setup and hold time between STROBE and data that must be met as seen on the electrical characteristics section. The relationship between CKREF and STROBE can be synchronous or asynchronous depending on what is available in the system. It is suggested that if the signals are synchronous and in normal operation that CKREF is tied to STROBE as close to the chip as possible. If you are running an asynchronous or spread spectrum setup, please be aware this may result on cycle jitter on the CKP signal. They cycle jitter does not effect the output data and clock relationship, the display or end application should continue to work as normal.

#### **PLL Note**

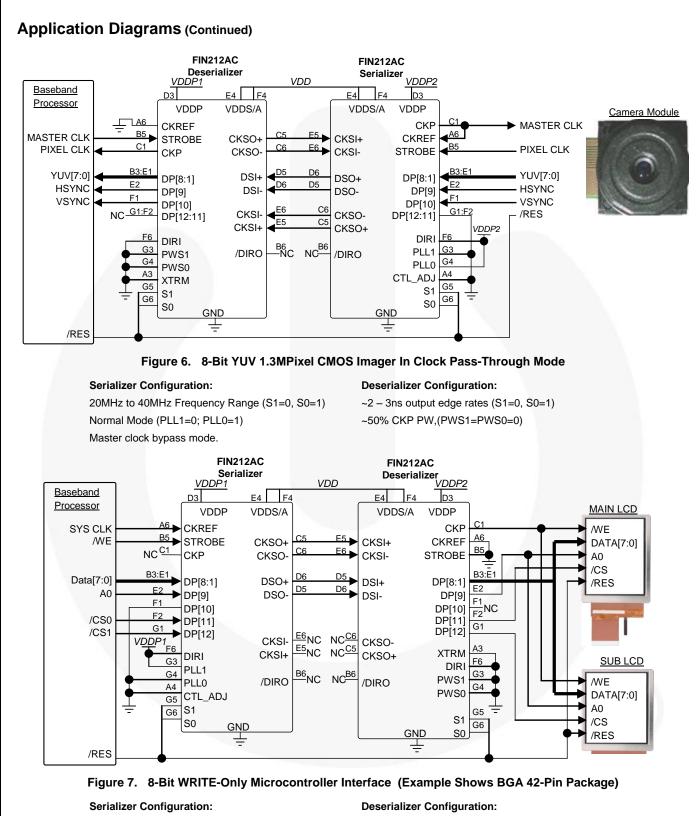

Please note that the PLL ranges can overlap, power consumption can be reduced by selecting the operation in the lower end of the higher speed PLL range.

#### **Application Diagrams**

The following application diagrams illustrate the most typical applications for the FIN212 device. Specific configurations of the control pins may vary based on the needs of a given system. The following recommendations are valid for all of the applications shown.

µSerDes™ FIN212AC —

20MHz to 40MHz Frequency Range (S1=0, S0=1) CKREF is twice as fast STROBE (PLL1=1; PLL0=0) CKREF=26MHz & STROBE Frequency=10 MHz

~7 - 8ns output edge rates (S1=1, S0=0) ~50% CKP PW,(PWS1=PWS0=0)

#### Additional Application Information

**Flex Cabling:** The serial I/O information is transmitted at a high serial rate. Care must be taken implementing this serial I/O flex cable. The following best practices should be used when developing the flex cabling or Flex PCB.

- Keep all four differential Serial Wires the same length.
- Do not allow noisy signals over or near differential serial wires. Example: No LVCMOS traces over differential serial wires.
- Use only one ground plane or wire over the differential serial wires. Do not run ground over top and bottom.
- Design goal of 100Ω differential characteristic impedance.
- Do not place test points on differential serial wires.
- Use differential serial wires a minimum of 2cm away from the antenna.
- For additional applications notes or flex guidelines see your sales representative or contact Fairchild directly.
- For samples and questions, please contact: <u>Interface@fairchildsemi.com</u>.

#### **Absolute Maximum Ratings**

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

Symbol	Paramet	er	Min.	Max.	Unit

	Charged Device Model, JESD22-C10	Charged Device Model, JESD22-C101			kV

#### **Recommended Operating Conditions**

The Recommended Operating Conditions table defines the conditions for actual device operation. Recommended operating conditions are specified to ensure optimal performance to the datasheet specifications. Fairchild does not recommend exceeding them or designing to Absolute Maximum Ratings.

Symbol	Parameter	Min.	Max.	Unit
$V_{DDA}, V_{DDS}$	Supply Voltage	2.5	3.6	V

#### Notes:

 Typical values are given for V<sub>DD</sub>=2.775V and T<sub>A</sub>=25°C. Positive current values refer to the current flowing into the device and negative values refer to the current flowing out of pins. Voltages are referenced to GROUND unless otherwise specified (except ΔV<sub>OD</sub> and V<sub>OD</sub>).

4. V<sub>GO</sub> is the difference in device ground levels between the CTL driver and the CTL receiver.

μSerDes™ FIN212AC — 12-Bit Serializer / Deserializer Supporting Cameras and Small Displays

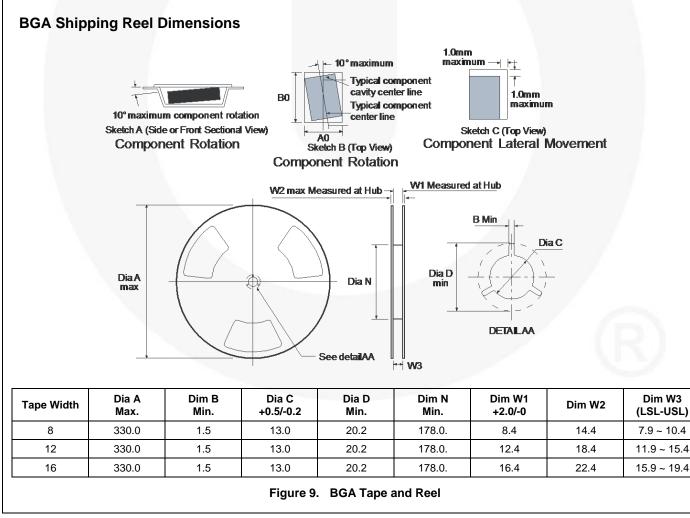

#### Tape and Reel Specifications (Continued)

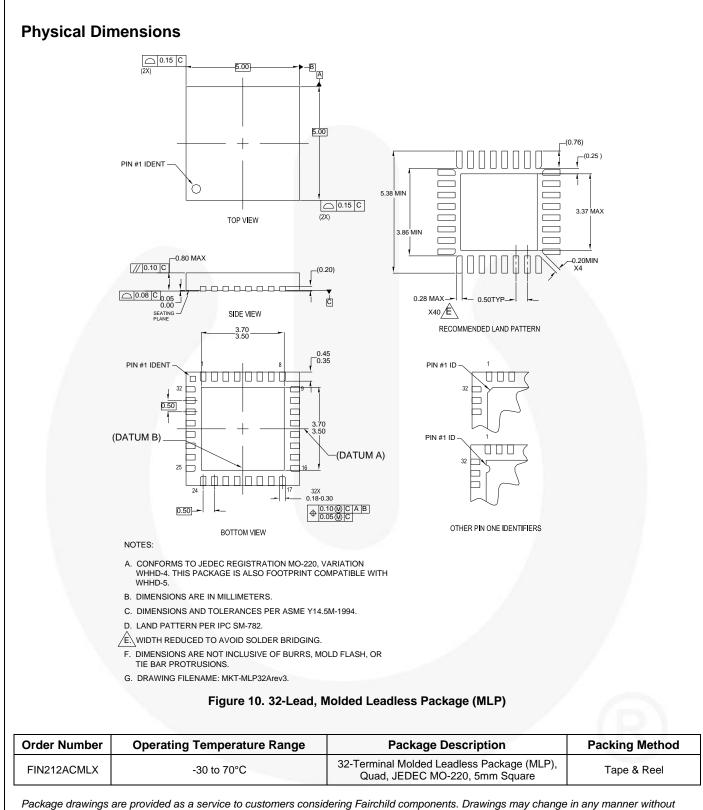

#### **BGA Embossed Tape Dimensions**

#### Notes:

A<sub>0</sub>, B<sub>0</sub>, and K<sub>0</sub> dimensions are determined with respect to the EIA/JEDEC RS-481 rotational and lateral movement requirements (see sketches A, B, and C).

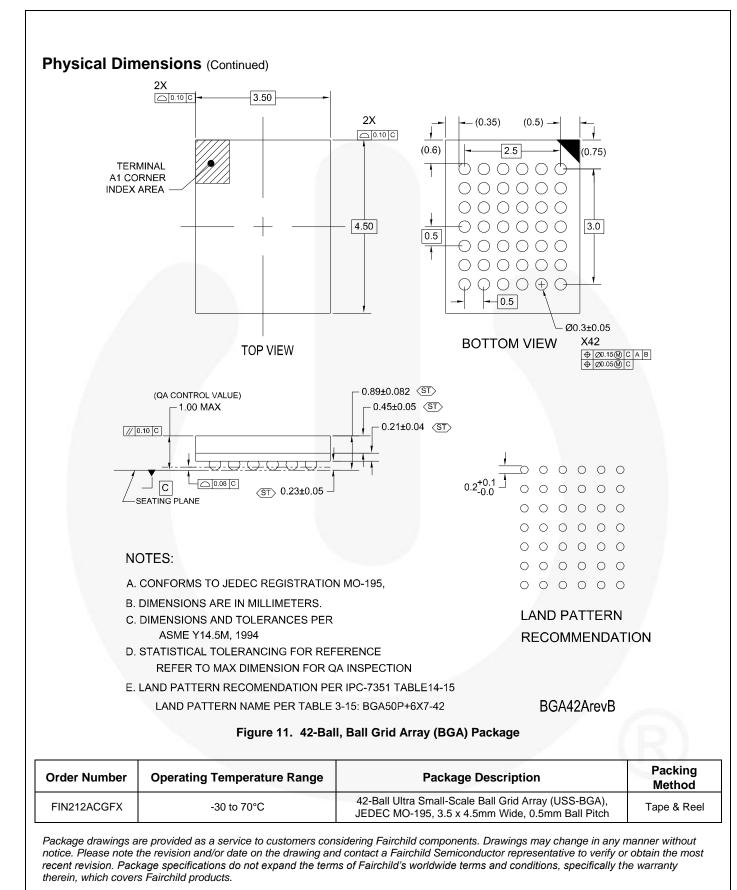

Package drawings are provided as a service to customers considering Fairchild components. Drawings may change in any manner without notice. Please note the revision and/or date on the drawing and contact a Fairchild Semiconductor representative to verify or obtain the most recent revision. Package specifications do not expand the terms of Fairchild's worldwide terms and conditions, specifically the warranty therein, which covers Fairchild products.

Always visit Fairchild Semiconductor's online packaging area for the most recent package drawings: http://www.fairchildsemi.com/packaging/.

#### FAIRCHILD SEMICONDUCTOR TRADEMARKS The following includes registered and unregistered trademarks and service marks, owned by Fairchild Semiconductor and/or its global subsidiaries, and is not intended to be an exhaustive list of all such trademarks. 2Cool™ FPS™ Svnc-Lock™ AccuPower™ F-PFS™ FRFET® AX-CAP® PowerTrench<sup>®</sup> Global Power Resource BitSiC™ TinyBoost™ PowerXS<sup>™</sup> GreenBridge™ Build it Now™ TinvBuck™ Programmable Active Droop™ CorePLUS™ Green FPS™ TinvCalc™ OFFT Green FPS™ e-Series™ **CorePOWER™** TinyLogic® OS™ Gmax⊤ TINYOPTO **CROSSVOLT**™ Quiet Series™ GTO™ CTI ™ TinvPower™ RapidConfigure™ TinyPWM™ IntelliMAX™ Current Transfer Logic™ 0 DEUXPEED **ISOPLANAR**<sup>TM</sup> TinyWire™ Saving our world, 1mW/W/kW at a time™ Dual Cool™ Making Small Speakers Sound Louder TranSiC™ SignalWise™ EcoSPARK<sup>®</sup> and Better TriFault Detect™ SmartMax™ EfficientMax™ MegaBuck™ TRUECURRENT®\* SMART START MICROCOUPLER ESBC™ μSerDes™ Solutions for Your Success™ R MicroFET™ F $\mu_{\scriptscriptstyle{\mathsf{Ser}}}$ SPM MicroPak™ Fairchild® STEAL THT MicroPak2™ UHC Fairchild Semiconductor® SuperFET<sup>®</sup> MillerDrive™ Ultra FRFET™ FACT Quiet Series™ SuperSOT™-3 MotionMax™ UniFET SuperSOT™-6 FACT mWSaver™ FAST® VCX™ SuperSOT™-8 OptoHiT™ VisualMax™ FastvCore™ SupreMOS<sup>®</sup> OPTOLOGIC® VoltagePlus™ SyncFET™ FETBench™ **OPTOPLANAR®** XS™ \* Trademarks of System General Corporation, used under license by Fairchild Semiconductor. DISCLAIMER FAIRCHILD SEMICONDUCTOR RESERVES THE RIGHT TO MAKE CHANGES WITHOUT FURTHER NOTICE TO ANY PRODUCTS HEREIN TO IMPROVE RELIABILITY, FUNCTION, OR DESIGN. FAIRCHILD DOES NOT ASSUME ANY LIABILITY ARISING OUT OF THE APPLICATION OR USE OF ANY PRODUCT OR CIRCUIT DESCRIBED HEREIN; NEITHER DOES IT CONVEY ANY LICENSE UNDER ITS PATENT RIGHTS, NOR THE RIGHTS OF OTHERS. THESE SPECIFICATIONS DO NOT EXPAND THE TERMS OF FAIRCHILD'S WORLDWIDE TERMS AND CONDITIONS. SPECIFICALLY THE WARRANTY THEREIN. WHICH COVERS THESE PRODUCTS. LIFE SUPPORT POLICY FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein: 1. Life support devices or systems are devices or systems which, (a) are 2. A critical component in any component of a life support, device, or intended for surgical implant into the body or (b) support or sustain system whose failure to perform can be reasonably expected to life, and (c) whose failure to perform when properly used in cause the failure of the life support device or system, or to affect its accordance with instructions for use provided in the labeling, can be safety or effectiveness. reasonably expected to result in a significant injury of the user.

#### ANTI-COUNTERFEITING POLICY

Fairchild Semiconductor Corporation's Anti-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our external website, www.fairchildsemi.com, under Sales Support.

Counterfeiting of semiconductor parts is a growing problem in the industry. All manufacturers of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed applications, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly from Fairchild or from Authorized Fairchild Distributors who are listed by country on our web page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceability, meet Fairchild's quality standards for handling and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and will appropriately address any warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is committed to combat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.

#### PRODUCT STATUS DEFINITIONS

Datasheet Identification	Product Status	Definition
Advance Information	Formative / In Design	Datasheet contains the design specifications for product development. Specifications may change in any manner without notice.
Preliminary     First Production       No Identification Needed     Full Production		Datasheet contains preliminary data; supplementary data will be published at a later date. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve design.
		Datasheet contains final specifications. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve the design.
Obsolete	Not In Production	Datasheet contains specifications on a product that is discontinued by Fairchild Semiconductor. The datasheet is for reference information only.
