# ON Semiconductor®

# To learn more about ON Semiconductor, please visit our website at www.onsemi.com

Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore (\_), the underscore (\_) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (\_). Please check the ON Semiconductor website to verify the updated device numbers. The most current and up-to-date ordering information can be found at <a href="www.onsemi.com">www.onsemi.com</a>. Please email any questions regarding the system integration to <a href="mailto:Fairchild\_questions@onsemi.com">Fairchild\_questions@onsemi.com</a>.

### 74LCX16501

# **Low Voltage 18-Bit Universal Bus Transceivers** with 5V Tolerant Inputs and Outputs

### **General Description**

The LCX16501 is an 18-bit universal bus transceiver combining D-type latches and D-type flip-flops to allow data flow in transparent, latched, and clocked modes.

Data flow in <u>each</u> direction is controlled by output-enable (OEAB and OEBA), latch-enable (LEAB and LEBA), and clock (CLKAB and CLKBA) inputs.

The LCX16501 is designed for low voltage (2.5V or 3.3V)  $V_{CC}$  applications with capability of interfacing to a 5V signal environment

The LCX16501 is fabricated with an advanced CMOS technology to achieve high speed operation while maintaining CMOS low power.

### **Features**

- 5V tolerant inputs and outputs
- 2.3V-3.6V V<sub>CC</sub> specifications provided
- 6.0 ns  $t_{PD}$  max ( $V_{CC} = 3.3V$ ), 20  $\mu$ A  $I_{CC}$  max
- Power down high impedance inputs and outputs
- Supports live insertion/withdrawal (Note 1)
- $\pm$ 24 mA Output Drive (V<sub>CC</sub> = 3.0V)
- Implements patented noise/EMI reduction circuitry
- Latch-up performance exceeds 500 mA
- ESD performance:

Human body model > 2000V Machine model < 200V

**Note 1:** To ensure the high-impedance state during power up or down,  $\overline{\text{OE}}$  should be tied to  $V_{CC}$  and  $\overline{\text{OE}}$  tied to GND through a resistor: the minimum value or the resistor is determined by the current-sourcing capability of the driver.

### **Ordering Code:**

| Order Number  | Package Number | Package Description   |
|---------------|----------------|---|
| 74LCX16501MEA | MS56A          | 56-Lead Shrink Small Outline Package (SSOP), JEDEC MO-118, 0.300 Wide       |
| 74LCX16501MTD | MTD56          | 56-Lead Thin Shrink Small Outline Package (TSSOP), JEDEC MO-153, 6.1mm Wide |

Devices also available on Tape and Reel. Specify by appending the suffix letter "X" to the ordering code.

### **Connection Diagram**

### **Truth Table**

(Note 2)

|      | Inputs |            |    |                         |  |
|------|--------|------------|----|-------------------------|--|
| OEAB | LEAB   | CLKAB      | An | B <sub>n</sub>          |  |
| L    | Х      | Х          | Х  | Z                       |  |
| Н    | Н      | Х          | L  | L                       |  |
| Н    | Н      | Х          | Н  | Н                       |  |
| Н    | L      | $\uparrow$ | L  | L                       |  |
| Н    | L      | $\uparrow$ | Н  | Н                       |  |
| Н    | L      | Н          | Х  | B <sub>0</sub> (Note 3) |  |
| Н    | L      | L          | Х  | B <sub>0</sub> (Note 4) |  |

Note 2: A-to-B data flow is shown: B-to-A flow is similar but uses OEBA, LEBA, and CLKBA.

Note 3: Output level before the indicated steady-state input conditions were established, provided that CLKAB was HIGH before LEAB went LOW.

Note 4: Output level before the indicated steady-state input conditions were established.

### **Functional Description**

For A-to-B data flow, the LCX16501 operates in the transparent mode when LEAB is HIGH. When LEAB is LOW, the A data is latched if CLKAB is held at a high or low logic level. If LEAB is LOW, the A bus data is stored in the latch/flip-flop on the LOW-to-HIGH transition of CLKAB. When

<code>OEAB</code> is HIGH, the outputs are active. When <code>OEAB</code> is LOW, the outputs are in the high impedance state.

 $\overline{\text{Data}}$  flow for B to A is similar to that of A to B but uses  $\overline{\text{OEBA}}$ , LEBA, and CLKBA. The output enables are complementary (OEAB is active HIGH and  $\overline{\text{OEBA}}$  is active LOW).

Note 5: The Absolute Maximum Ratings are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the Absolute Maximum Ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

Note 6: I<sub>O</sub> Absolute Maximum Rating must be observed.

Note 7: Unused (inputs or I/Os) must be held HIGH or LOW. They may not float.

| toshl             | Output to Output Skew   |                      | 1.0  |                        |        |                        |           |       |
| t <sub>OSLH</sub> | (Note 9)                |                      | 1.0  |                        |        |                        |           | ns    |

Note 9: Skew is defined as the absolute value of the difference between the actual propagation delay for any two separate outputs of the same device. The specification applies to any outputs switching in the same direction, either HIGH-to-LOW (toSHL), or LOW-to-HIGH (toSLH).

## **Dynamic Switching Characteristics**

### LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

- Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
- A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
