Overview

This kit includes all components of OM5569-NT322E and on top an NFC reader. Use the PC demo application with the external reader to communicate with the NTAG I²C plus Explorer board instead of using an NFC-enabled phone.
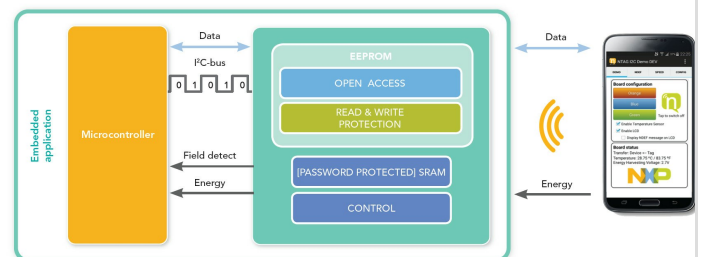

NXP's NTAG I²C *plus* Explorer Kit is an all-in-one demonstration and development resource for NFC connected tags. Designed to emulate using an NTAG I²C *plus* tag chip in an embedded electronic system, the kit centers around a multi-purpose microprocessor-based development/demo board, and includes a full complement of hardware and software tools to support investigation of the NTAG I²C chip operation, the NFC RF communication link, and the I²C serial bus connected link; perform a variety of demonstrations; and develop/test your own applications.
Features

▸ NFC Explorer Board with PCB antenna board
