# Precision 8-Ch/Dual 4-Ch Low Voltage Analog Multiplexers 

## DESCRIPTION

The DG3408, DG3409 uses BiCMOS wafer fabrication technology that allows the DG3408/3409 to operate on single and dual supplies. Single supply voltage ranges from 3 V to 12 V while dual supply operation is recommended with $\pm 3 \mathrm{~V}$ to $\pm 6 \mathrm{~V}$.

The DG3408 is an 8-channel single-ended analog multiplexer designed to connect one of eight inputs to a common output as determined by a 3-bit binary address ( $A_{0}, A_{1}, A_{2}$ ). The DG3409 is a dual 4-channel differential analog multiplexer designed to connect one of four differential inputs to a common dual output as determined by its 2-bit binary address ( $A_{0}, A_{1}$ ). Break-before-make switching action to protect against momentary crosstalk between adjacent channels.

## FEATURES

- 2.7 V to 12 V single supply or $\pm 3$ to $\pm 6 \mathrm{~V}$ dual supply operation

- Low on-resistance - $\mathrm{R}_{\mathrm{ON}}: 3.9 \Omega$ typ.

RoHS

- Fast switching: $\mathrm{t}_{\mathrm{ON}}-42 \mathrm{~ns}, \mathrm{t}_{\text {OFF }}-24 \mathrm{~ns}$ COMPLIANT
- Break-before-make guaranteed
- Low leakage
- TTL, CMOS, LV logic (3 V) compatible
- 2000 V ESD protection (HBM)
- MICRO FOOT ${ }^{\circledR}$ package
- Lead (Pb)-free solder bumps
- Compliant to RoHS Directive 2002/95/EC

## BENEFITS

- High accuracy
- Single and dual power rail capacity
- Wide operating voltage range
- Simple logic interface

## APPLICATIONS

- Data acquisition systems
- Battery operated equipment
- Portable test equipment
- Sample and hold circuits
- Communication systems
- SDSL, DSLAM
- Audio and video signal routing

## Notes:

a. Leakage parameters are guaranteed by worst case test condition and not subject to production test.
b. Room $=25^{\circ} \mathrm{C}$, Full = as determined by the operating temperature suffix.
c. The algebraic convention whereby the most negative value is a minimum and the most positive a maximum, is used in this data sheet.
d. Typical values are for DESIGN AID ONLY, not guaranteed nor subject to production testing.
e. Guaranteed by design, not subject to production test.
f. $\mathrm{V}_{\mathbb{I N}}=$ input voltage to perform proper function.
g. $\Delta R_{\text {DON }}=R_{\text {DON }}$ Max $-R_{\text {DON }}$ Min.
h. Worst case isolation occurs on Channel 4 due to proximity to the drain pin.
i. $R_{\text {DON }}$ flatness is measured as the difference between the minimum and maximum measured values across a defined Analog signal.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
