

# Smart high-side NMOS-power switch

ITS4200S-SJ-D

## Features

- CMOS compatible input
- Switching all types of resistive, inductive and capacitive loads
- Fast demagnetization of inductive loads
- Very low standby current
- Optimized electromagnetic compatibility (EMC)
- Open drain diagnostic output for overtemperature and short circuit
- Open load detection in OFF-state with external resistor
- Overload protection
- Current limitation
- Short circuit protection
- Thermal shutdown with restart
- Overvoltage protection (including load dump)
- Reverse battery protection with external resistor
- Loss of GND and loss of Vbb protection
- Electrostatic discharge protection (ESD)
- Green Product (RoHS compliant)

## Potential applications

- All types of resistive, inductive and capacitive loads
- Power switch for 12V, 24V and 45V DC applications with CMOS compatible control interface
- Open drain diagnosis feedback for overtemperature and short circuit
- Driver for electromagnetic relays
- Power management for high-side-switching with low current consumption in OFF-mode

## Product validation

Qualified for industrial applications according to the relevant tests of JEDEC.

## Description

The ITS4200S-SJ-D is a protected 200m  $\Omega$  single channel Smart High-Side NMOS-Power Switch in a PG-DSO-8 package with charge pump, CMOS compatible input and diagnostic feedback.

1) Not subject to production test, specified by design.

2) Device on 50mm\*50mm\*1.5mm epoxy PCB FR4 with 6 cm<sup>2</sup> (one layer, 70mm thick) copper area for Vbb connection. PCB is vertical without blown air.

3) Not subject to production test, specified by design.

4) ESD susceptibility HBM according to ANSI/ESDA/JEDEC JS001 (1.5 k $\Omega$ , 100 pF)

*Note: Exposure to absolute maximum rating conditions for extended periods may affect device reliability. Integrated protection functions are designed to prevent IC destruction under fault conditions described in the data sheet. Fault conditions are considered as “outside” the normal operating range. Protection functions are neither designed for continuous nor repetitive operation.*

1) Not subject to production test, specified by design

2) Specified  $R_{thJA}$  value is according to Jedec JESD51-3 at natural convection on FR4 1s0p board, footprint; the product (Chip+Package) was simulated on a 76.2 x 114.3 x 1.5 mm board with 1x 70µm Cu.

3) Specified  $R_{thJA}$  value is according to Jedec JESD51-3 at natural convection on FR4 1s0p board, Cu, 300mm<sup>2</sup>; the Product (Chip+Package) was simulated on a 76.2 x 114.3 x 1.5 mm board with 1x 70µm Cu.

4) Specified  $R_{thJA}$  value is according to Jedec JESD51-3 at natural convection on FR4 1s0p board, 600mm<sup>2</sup>; the product (Chip+Package) was simulated on a 76.2 x 114.3 x 1.5 mm board with 1x 70µm Cu.

5) Specified  $R_{thJA}$  value is according to Jedec JESD51-2,-5,-7 at natural convection on FR4 2s2p board; the product (Chip+Package) was simulated on a 76.2 x 114.3 x 1.5 mm board with 2 inner copper layers (2 x 70µm Cu, 2 x 35µm Cu).

6) Specified  $R_{thJA}$  value is according to Jedec JESD51-2,-5,-7 at natural convection on FR4 2s2p board with two thermal vias; the Product (Chip+Package) was simulated on a 76.2 x 114.3 x 1.5 mm board with 2 inner copper layers (2 x 70µm Cu, 2 x 35µm Cu). The diameter of the two vias are equal 0.3mm and have a plating of 25µm with a copper heatsink area of 3mm x 2mm). JEDEC51-7: The two plated-through hole vias should have a solder land of no less than 1.25 mm diameter with a drill hole of no less than 0.85 mm diameter.

- 1) Device on 50mm x 50mm x 1,5mm epoxy FR4 PCB with 6cm<sup>2</sup> (one layer copper 70um thick) copper area for supply voltage connection. PCB in vertical position without blown air.
- 2) Timing values only with high slewrate input signal; otherwise slower.
- 3) Integrated protection functions are designed to prevent IC destruction under fault conditions described in the data sheet. Fault conditions are considered as “outside” normal operating range. Protection functions are not designed for continuous repetitive operation.
- 4) No subject to production test; specified by design.
- 5) Requires a 150  $\Omega$  resistor in GND connection. The reverse load current through the intrinsic drain-source diode of the power-MOS has to be limited by the connected load. Power dissipation is higher compared to normal operation due to the voltage drop across the drain-source diode. The temperature protection is not functional during reverse current operation! Input current has to be limited (see max ratings).

## 6 Application information

### 6.1 Application diagram

The following information is given as a hint for the implementation of the device only and shall not be regarded as a description or warranty for a certain functionality, condition or quality of the device.

**Figure 4 Application diagram**

The ITS4200S-SJ-D can be connected directly to the battery of a supply network. It is recommended to place a ceramic capacitor (e.g.  $C_s = 220\text{nF}$ ) between supply and GND of the ECU to avoid line disturbances. Wire harness inductors/resistors are sketched in the application circuit above.

The complex load (resistive, capacitive or inductive) must be connected to the output pin OUT.

A built-in current limit protects the device against destruction.

The ITS4200S-SJ-D can be switched on and off with standard logic ground related logic signal at pin IN.

In standby mode (IN=L) the ITS4200S-SJ-D is deactivated with very low current consumption.

The output voltage slope is controlled during on and off transition to minimize emissions. Only a small ceramic capacitor  $C_{OUT}=1\text{nF}$  is recommended to attenuate RF noise.

In the following chapters the main features, some typical waveforms and the protection behavior of the ITS4200S-SJ-D is shown. For further details please refer to application notes on the Infineon homepage.

Application information

6.2 Diagnosis description

For diagnostic purpose the device provides a digital output pin ST in order to indicate fault conditions. The status output (ST) of the ITS4200S-SJ-D is a high voltage open drain output. In “normal” operation mode the NMOS open drain transistor is switched OFF. The following truth table defines the status output.

**Table 6 Truth table of diagnosis feature**

Green Product (RoHS compliant)

To meet the world-wide customer requirements for environmentally friendly products and to be compliant with government regulations the device is available as a green product. Green products are RoHS-Compliant (i.e Pb-free finish on leads and suitable for Pb-free soldering according to IPC/JEDEC J-STD-020).
