Description

The PI6C10807 is a 1.8V, or 2.5V high-speed, low-noise 1-10 non-inverting clock buffer. The key goal in designing the PI6C10807 is to target networking applications that require low-skew, low-jitter, and high-frequency clock distribution.

Providing output-to-output skew as low as 60ps, the PI6C10807 is an ideal clock distribution device for synchronous systems. Designing synchronous networking systems requires a tight level of skew from a large number of outputs.
