# High Voltage X7R Dielectric, 500 – 3,000 VDC (Commercial & Automotive Grade)

#### **Overview**

KEMET's high voltage surface mount MLCCs in X7R Dielectric feature a 125°C maximum operating temperature and are considered "temperature stable." The Electronics Industries Alliance (EIA) characterizes X7R dielectric as a Class II material. Components of this classification are fixed, ceramic dielectric capacitors suited for bypass and decoupling applications or for frequency discriminating circuits where Q and stability of capacitance characteristics are not critical. X7R exhibits a predictable change in capacitance with respect to time and voltage and boasts a minimal change in capacitance with reference to ambient temperature. Capacitance change is limited to ±15% from -55°C to +125°C.

Available in a variety of case sizes and industry leading CV values (capacitance/voltage), these devices exhibit low leakage current and low ESR at high frequencies. Conventional uses include both snubbers and filters in applications such as switching power supplies and lighting ballasts. Their exceptional performance at high frequencies has made high voltage MLCC's the preferred dielectric choice of design engineers worldwide. In addition to their use in power supplies, these capacitors are widely used in industries related to automotive (hybrid), telecommunications, medical, military, aerospace, semiconductors and test/diagnostic equipment.

Automotive Grade is available for applications requiring proven, reliable performance in harsh environments. Whether under-hood or in-cabin, these capacitors are designed for mission and safety critical automotive circuits. Stricter testing protocol and inspection criteria have been established for automotive grade products in recognition of potentially harsh environmental conditions. KEMET automotive grade series capacitors meet the demanding Automotive Electronics Council's AEC-Q200 qualification requirements.

## **Ordering Information**

| C       | 1210   | С                        | 154  | K                               | С   | R          | Α                       | С  | TU  |

<sup>&</sup>lt;sup>1</sup> Additional termination finish options may be available. Contact KEMET for details.

One world. One KEMET

<sup>&</sup>lt;sup>1,2</sup> SnPb termination finish option is not available on Automotive Grade product.

<sup>&</sup>lt;sup>2</sup> Additional reeling or packaging options may be available. Contact KEMET for details.

## **Packaging C-Spec Ordering Options Table**

| Packaging Type            | Packaging/Grade<br>Ordering Code (C-Spec) |
|---------------------------|---|
| Commerc                   | ial Grade <sup>1</sup>                    |
| Bulk Bag                  | Blank                                     |
| 7" Tape & Reel/Unmarked   | TU  |
| 7" Tape & Reel/Marked     | TM  |
| Automoti                  | ve Grade <sup>2</sup>                     |
| 7" Reel                   | AUTO                                      |
| 13" Reel/Punched Paper    | AUTO 7411                                 |
| 13" Reel/Embossed Plastic | AUTO 7210                                 |

<sup>&</sup>lt;sup>1</sup> C-Spec not required when ordering "Bulk Bag" packaging option.

#### **Benefits**

- -55°C to +125°C operating temperature range
- Industry-leading CV values
- · Exceptional performance at high frequencies
- · Lead (Pb)-Free, RoHS and REACH compliant
- EIA 0805, 1206, 1210, 1808, 1812, 1825, 2220, and 2225 case sizes
- DC voltage ratings of 500 V, 630 V, 1 KV, 1.5 KV, 2 KV, 2.5 KV, and 3 KV
- Capacitance offerings ranging from 10 pF to 0.33 μF

- Available capacitance tolerances of ±5%, ±10%, and ±20%
- · Low ESR and ESL
- · Non-polar device, minimizing installation concerns
- Commercial and Automotive (AEC–Q200) grades available
- 100% pure matte tin-plated termination finish allowing for excellent solderability
- SnPb plated termination finish option available upon request (5% minimum)

## **Applications**

Typical applications include switch mode power supplies (input filters, resonators, tank circuits, snubber circuits, output filters), high voltage coupling and DC blocking, lighting ballasts, voltage multiplier circuits, DC/DC converters and coupling capacitors in Ćuk converters. Markets include power supply, LCD fluorescent backlight ballasts, HID lighting, telecom equipment, industrial and medical equipment/control, LAN/WAN interface, analog and digital modems, and automotive (electric and hybrid vehicles, charging stations and lighting) applications.

## **Application Note**

X7R dielectric is not recommended for AC line filtering or pulse applications. These capacitors and/or the assembled circuit board containing these capacitors may require a protective surface coating to prevent external surface arcing.

<sup>&</sup>lt;sup>1</sup> The terms "Marked" and "Unmarked" pertain to laser marking option of components.

<sup>&</sup>lt;sup>2</sup> Reeling tape options (Paper or Plastic) are dependent on capacitor case size (L"x W") and thickness dimension. See "Chip Thickness/Packaging Quantities" and "Tape & Reel Packaging Information" sections of this document.

<sup>&</sup>lt;sup>2</sup> For additional Information regarding "AUTO" C-Spec options, see "Automotive C-Spec Information" section of this document.

<sup>&</sup>lt;sup>2</sup> All Automotive packaging C-Specs listed exclude packaging of laser mark components. Please contact KEMET if you require a laser marked option.

#### **Automotive C-Spec Information**

KEMET Automotive Grade products meet or exceed the requirements outlined by the Automotive Electronics Council. Details regarding test methods and conditions are referenced in document AEC–Q200, Stress Test Qualification for Passive Components. These products are supported by a Product Change Notification (PCN) and Production Part Approval Process warrant (PPAP).

Automotive products offered through our distribution channel have been assigned an inclusive ordering code C-Spec, "AUTO". This C-Spec was developed in order to better serve small and medium sized companies that prefer an automotive grade component without the requirement to submit a customer Source Controlled Drawing (SCD) or specification for review by a KEMET engineering specialist. This C-Spec is therefore not intended for use by KEMET's OEM Automotive customers and are not granted the same "privileges" as other automotive C-Specs. Customer PCN approval and PPAP request levels are limited (see details below).

#### **Product Change Notification (PCN)**

The KEMET Product Change Notification system is used to communicate primarily the following types of changes:

- Product/process changes that affect product form, fit, function, and /or reliability
- · Changes in manufacturing site
- Product obsolescence

| KEMET Automotive            | Customer Noti                    | fication due to: | Days prior to    |
|-----------------------------|----------------------------------|------------------|------------------|
| C-Spec                      | Process/Product change           | Obsolescence*    | implementation   |
| KEMET assigned <sup>1</sup> | Yes (with approval and sign off) | Yes              | 180 days Minimum |
| AUTO                        | Yes (without approval)           | Yes              | 90 days Minimum  |

<sup>&</sup>lt;sup>1</sup> KEMET assigned C-Specs require the submittal of a customer SCD or customer specification for review. For additional information contact KEMET.

#### **Production Part Approval Process (PPAP)**

The purpose of the Production Part Approval Process is:

- To ensure that supplier can meet the manufacturability and quality requirements for the purchased parts.
- To provide the evidence that all customer engineering design record and specification requirements are properly understood and fulfilled by the manufacturing organization.
- To demonstrate that the established manufacturing process has the potential to produce the part

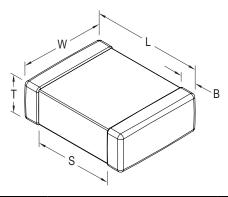

| KEMET<br>Automotive            |   | PPAP (Product | Part Approval | Process) Level |   |
|--------------------------------|---|---------------|---------------|----------------|---|
| C-Spec                         | 1 | 2             | 3             | 4              | 5 |
| KEMET<br>assigned <sup>1</sup> | • | •             | •             | •              | • |
| AUTO                           | 0 |               | 0             |                |   |

<sup>&</sup>lt;sup>1</sup> KEMET assigned C-Specs require the submittal of a customer SCD or customer specification for review. For additional information contact KEMET.

- Part Number specific PPAP available
- Product family PPAP only

## **Dimensions – Millimeters (Inches)**

| EIA<br>Size<br>Code | Metric<br>Size<br>Code | L<br>Length               | W<br>Width                | T<br>Thickness  | B<br>Bandwidth            | S<br>Separation<br>Minimum | Mounting<br>Technique |

| 1825                | 4564                   | 4.50 (.177) ± 0.30 (.012) | 6.40 (.252) ± 0.40 (.016) |                 | 0.60 (.024) ± 0.35 (.014) |                            | Solder Reflow Only    |
| 2220                | 5650                   | 5.70 (.224) ± 0.40 (.016) | 5.00 (.197) ± 0.40 (.016) |                 | 0.60 (.024) ± 0.35 (.014) |                            |                       |
| 2225                | 5664                   | 5.60 (.220) ± 0.40 (.016) | 6.40 (.248) ± 0.40 (.016) |                 | 0.60 (.024) ± 0.35 (.014) |                            |                       |

#### **Qualification/Certification**

Commercial Grade products are subject to internal qualification. Details regarding test methods and conditions are referenced in Table 4, Performance & Reliability.

Automotive Grade products meet or exceed the requirements outlined by the Automotive Electronics Council. Details regarding test methods and conditions are referenced in document AEC–Q200, Stress Test Qualification for Passive Components. For additional information regarding the Automotive Electronics Council and AEC–Q200, please visit their website at www.aecouncil.com.

## **Environmental Compliance**

Lead (Pb)-Free, RoHS, and REACH compliant without exemptions (excluding SnPb termination finish option).

RoHS Compliant

#### **Electrical Parameters/Characteristics**

| Item   | Parameters/Characteristics   |
|--|--|
| Operating Temperature Range  | -55°C to +125°C  |
| Capacitance Change with Reference to +25°C and 0 VDC Applied (TCC) | ±15%   |
| Aging Rate (Maximum % Capacitance Loss/Decade Hour)                | 3.0%   |
| Dielectric Withstanding Voltage (DWV)                              | 150% of rated voltage for voltage rating of < 1,000 V 120% of rated voltage for voltage rating of ≥ 1,000 V (5 ±1 second and charge/discharge not exceeding 50 mA) |
| Dissipation Factor (DF) Maximum Limit @ 25°C                       | 2.5%   |
| Insulation Resistance (IR) Limit @ 25°C                            | See Insulation Resistance Limit Table (500 VDC applied for 120 ±5 seconds @ 25°C)  |

Regarding aging rate: Capacitance measurements (including tolerance) are indexed to a referee time of 1,000 hours.

To obtain IR limit, divide  $M\Omega$ - $\mu$ F value by the capacitance and compare to  $G\Omega$  limit. Select the lower of the two limits.

Capacitance and dissipation factor (DF) measured under the following conditions:

1 kHz  $\pm 50$  Hz and 1.0  $\pm 0.2$  Vrms if capacitance  $\leq 10~\mu F$ 

120 Hz  $\pm$ 10 Hz and 0.5  $\pm$ 0.1 Vrms if capacitance > 10  $\mu$ F

Note: When measuring capacitance it is important to ensure the set voltage level is held constant. The HP4284 and Agilent E4980 have a feature known as Automatic Level Control (ALC). The ALC feature should be switched to "ON."

#### **Post Environmental Limits**

|            | High Temperatu      | ıre Life, Biased     | <b>Humidity, Mois</b>          | ture Resistance      |                          |

KEMET reserves the right to substitute product with an improved temperature characteristic, tighter capacitance tolerance and/or higher voltage capability within the same form factor (configuration and dimensions).

<sup>&</sup>lt;sup>1</sup> Only for capacitance values ≥ 22 μF

**Density Level A:** For low-density product applications. Recommended for wave solder applications and provides a wider process window for reflow solder processes. KEMET only recommends wave soldering of EIA 0603, 0805 and 1206 case sizes.

**Density Level B:** For products with a moderate level of component density. Provides a robust solder attachment condition for reflow solder processes. **Density Level C:** For high component density product applications. Before adapting the minimum land pattern variations the user should perform qualification testing based on the conditions outlined in IPC Standard 7351 (IPC–7351).

Image below based on Density Level B for an EIA 1210 case size.

## **Soldering Process**

#### **Recommended Soldering Technique:**

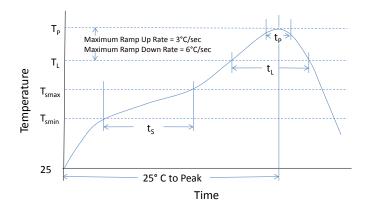

- Solder wave or solder reflow for EIA case sizes 0603, 0805 and 1206
- · All other EIA case sizes are limited to solder reflow only

#### **Recommended Reflow Soldering Profile:**

KEMET's families of surface mount multilayer ceramic capacitors (SMD MLCCs) are compatible with wave (single or dual), convection, IR or vapor phase reflow techniques. Preheating of these components is recommended to avoid extreme thermal stress. KEMET's recommended profile conditions for convection and IR reflow reflect the profile conditions of the IPC/J-STD-020 standard for moisture sensitivity testing. These devices can safely withstand a maximum of three reflow passes at these conditions.

| Drofile Feeture  | Terminati          | on Finish          |
|--|--------------------|--------------------|
| Profile Feature  | SnPb               | 100% Matte Sn      |

| Temperature Minimum (T <sub>Smin</sub> )                         | 100°C              | 150°C              |
| Temperature Maximum (T <sub>Smax</sub> )                         | 150°C              | 200°C              |
| Time $(t_s)$ from $T_{smin}$ to $T_{smax}$                       | 60 – 120 seconds   | 60 – 120 seconds   |
| Ramp-Up Rate (T <sub>L</sub> to T <sub>P</sub> )                 | 3°C/second maximum | 3°C/second maximum |
| Liquidous Temperature (T <sub>L</sub> )                          | 183°C              | 217°C              |
| Time Above Liquidous (t <sub>L</sub> )                           | 60 – 150 seconds   | 60 – 150 seconds   |
| Peak Temperature (T <sub>P</sub> )                               | 235°C              | 260°C              |
| Time Within 5°C of Maximum<br>Peak Temperature (t <sub>P</sub> ) | 20 seconds maximum | 30 seconds maximum |
| Ramp-Down Rate (T <sub>P</sub> to T <sub>L</sub> )               | 6°C/second maximum | 6°C/second maximum |
| Time 25°C to Peak<br>Temperature                                 | 6 minutes maximum  | 8 minutes maximum  |

Note 1: All temperatures refer to the center of the package, measured on the capacitor body surface that is facing up during assembly reflow.

## Table 4 - Performance & Reliability: Test Methods and Conditions

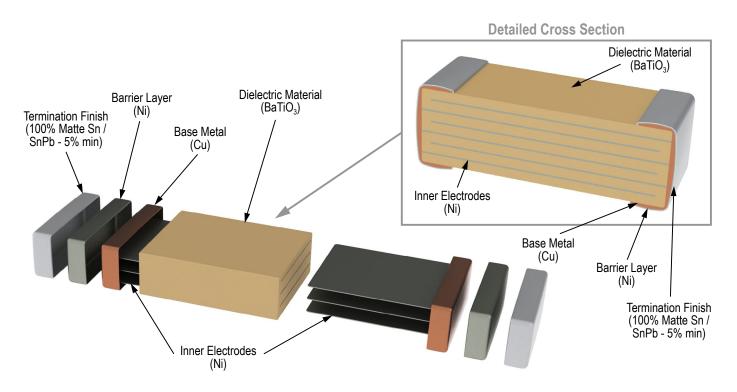

| Stress                 | Reference              | Test or Inspection Method  |
|------------------------|------------------------|--|
| Terminal Strength      | JIS-C-6429             | Appendix 1, Note: Force of 1.8 kg for 60 seconds.  |
| Board Flex             | JIS-C-6429             | Appendix 2, Note: Standard termination system – 2.0 mm (minimum) for all except 3 mm for C0G. Flexible termination system – 3.0 mm (minimum).  |
|                        |                        | Magnification 50 X. Conditions:  |
| Solderability          | J-STD-002              | a) Method B, 4 hours @ 155°C, dry heat @ 235°C   |
| Solderability          | J-31D-002              | b) Method B @ 215°C category 3   |
|                        |                        | c) Method D, category 3 @ 260°C  |
| Temperature Cycling    | JESD22 Method JA-104   | 1,000 cycles (-55°C to +125°C). Measurement at 24 hours +/- 2 hours after test conclusion.   |
| Digged Humidity        | MIL-STD-202 Method 103 | Load Humidity: 1,000 hours 85°C/85% RH and 200 VDC maximum. Add 100 K ohm resistor. Measurement at 24 hours +/- 2 hours after test conclusion.   |
| Biased Humidity        | MIL-STD-202 Method 103 | Low Volt Humidity: 1,000 hours 85°C/85% RH and 1.5 V. Add 100 K ohm resistor. Measurement at 24 hours +/- 2 hours after test conclusion.   |
| Moisture Resistance    | MIL-STD-202 Method 106 | t = 24 hours/cycle. Steps 7a and 7b not required. Unpowered. Measurement at 24 hours +/- 2 hours after test conclusion.  |
| Thermal Shock          | MIL-STD-202 Method 107 | -55°C/+125°C. Note: Number of cycles required – 300. Maximum transfer time – 20 seconds. Dwell time – 15 minutes. Air – Air.   |
| High Temperature Life  | MIL-STD-202 Method 108 | 1,000 hours at 125°C (85°C for X5R, Z5U and Y5V) with 1.2 X rated voltage applied.   |
| Storage Life           | MIL-STD-202 Method 108 | 150°C, 0 VDC for 1,000 hours.  |
| Vibration              | MIL-STD-202 Method 204 | 5 g's for 20 minutes, 12 cycles each of 3 orientations. Note: Use 8" X 5" PCB 0.031" thick, 7 secure points on one long side and 2 secure points at corners of opposite sides. Parts mounted within 2" from any secure point. Test from 10 – 2,000 Hz. |
| Mechanical Shock       | MIL-STD-202 Method 213 | Figure 1 of Method 213, Condition F.   |
| Resistance to Solvents | MIL-STD-202 Method 215 | Add aqueous wash chemical, OKEM Clean or equivalent.   |

## **Storage and Handling**

Ceramic chip capacitors should be stored in normal working environments. While the chips themselves are quite robust in other environments, solderability will be degraded by exposure to high temperatures, high humidity, corrosive atmospheres, and long term storage. In addition, packaging materials will be degraded by high temperature—reels may soften or warp and tape peel force may increase. KEMET recommends that maximum storage temperature not exceed 40°C and maximum storage humidity not exceed 70% relative humidity. Temperature fluctuations should be minimized to avoid condensation on the parts and atmospheres should be free of chlorine and sulfur bearing compounds. For optimized solderability chip stock should be used promptly, preferably within 1.5 years of receipt.

#### Construction

#### **Capacitor Marking (Optional):**

These surface mount multilayer ceramic capacitors are normally supplied unmarked. If required, they can be marked as an extra cost option. Marking is available on most KEMET devices but must be requested using the correct ordering code identifier(s). If this option is requested, two sides of the ceramic body will be laser marked with a "K" to identify KEMET, followed by two characters (per EIA–198 - see table below) to identify the capacitance value. EIA 0603 case size devices are limited to the "K" character only.

Laser marking option is not available on:

- C0G, Ultra Stable X8R and Y5V dielectric devices
- EIA 0402 case size devices
- EIA 0603 case size devices with Flexible Termination option.
- · KPS Commercial and Automotive Grade stacked devices.
- · X7R dielectric products in capacitance values outlined below

| EIA Case Size | <b>Metric Size Code</b> | Capacitance |
|---------------|-------------------------|-------------|
| 0603          | 1608                    | ≤ 170 pF    |
| 0805          | 2012                    | ≤ 150 pF    |
| 1206          | 3216                    | ≤ 910 pF    |
| 1210          | 3225                    | ≤ 2,000 pF  |
| 1808          | 4520                    | ≤ 3,900 pF  |
| 1812          | 4532                    | ≤ 6,700 pF  |
| 1825          | 4564                    | ≤ 0.018 µF  |
| 2220          | 5650                    | ≤ 0.027 µF  |
| 2225          | 5664                    | ≤ 0.033 µF  |

Marking appears in legible contrast. Illustrated below is an example of an MLCC with laser marking of "KA8", which designates a KEMET device with rated capacitance of 100  $\mu$ F. Orientation of marking is vendor optional.

## Capacitor Marking (Optional) cont'd

## **Tape & Reel Packaging Information**

KEMET offers multilayer ceramic chip capacitors packaged in 8, 12 and 16 mm tape on 7" and 13" reels in accordance with EIA Standard 481. This packaging system is compatible with all tape-fed automatic pick and place systems. See Table 2 for details on reeling quantities for commercial chips.

- 1. The embossment hole location shall be measured from the sprocket hole controlling the location of the embossment. Dimensions of embossment location and hole location shall be applied independent of each other.
- 2. The tape with or without components shall pass around R without damage (see Figure 6).
- 3. If S<sub>4</sub> < 1.0 mm, there may not be enough area for cover tape to be properly applied (see EIA Standard 481 paragraph 4.3 section b).
- 4. B, dimension is a reference dimension for tape feeder clearance only.
- 5. The cavity defined by A<sub>n</sub>, B<sub>n</sub> and K<sub>n</sub> shall surround the component with sufficient clearance that:
  - (a) the component does not protrude above the top surface of the carrier tape.
  - (b) the component can be removed from the cavity in a vertical direction without mechanical restriction, after the top cover tape has been removed.
  - (c) rotation of the component is limited to 20° maximum for 8 and 12 mm tapes and 10° maximum for 16 mm tapes (see Figure 3).
  - (d) lateral movement of the component is restricted to 0.5 mm maximum for 8 and 12 mm wide tape and to 1.0 mm maximum for 16 mm tape (see Figure 4).
  - (e) for KPS Series product,  $A_0$  and  $B_0$  are measured on a plane 0.3 mm above the bottom of the pocket.
  - (f) see Addendum in EIA Standard 481 for standards relating to more precise taping requirements.

- 1. The cavity defined by  $A_{\alpha}$ ,  $B_{\alpha}$  and T shall surround the component with sufficient clearance that:
  - a) the component does not protrude beyond either surface of the carrier tape.
  - b) the component can be removed from the cavity in a vertical direction without mechanical restriction, after the top cover tape has been removed.
  - c) rotation of the component is limited to 20° maximum (see Figure 3).
  - d) lateral movement of the component is restricted to 0.5 mm maximum (see Figure 4).
  - e) see Addendum in EIA Standard 481 for standards relating to more precise taping requirements.
- 2. The tape with or without components shall pass around R without damage (see Figure 6).

## **Packaging Information Performance Notes**

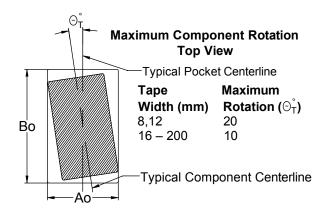

- 1. Cover Tape Break Force: 1.0 Kg minimum.
- 2. Cover Tape Peel Strength: The total peel strength of the cover tape from the carrier tape shall be:

| Tape Width   | Peel Strength                    |
|--------------|----------------------------------|
| 8 mm         | 0.1 to 1.0 Newton (10 to 100 gf) |
| 12 and 16 mm | 0.1 to 1.3 Newton (10 to 130 gf) |

The direction of the pull shall be opposite the direction of the carrier tape travel. The pull angle of the carrier tape shall be 165 $^{\circ}$  to 180 $^{\circ}$  from the plane of the carrier tape. During peeling, the carrier and/or cover tape shall be pulled at a velocity of 300  $\pm$ 10 mm/minute.

**3. Labeling:** Bar code labeling (standard or custom) shall be on the side of the reel opposite the sprocket holes. *Refer to EIA Standards 556 and 624.*

#### **Disclaimer**

All product specifications, statements, information and data (collectively, the "Information") in this datasheet are subject to change. The customer is responsible for checking and verifying the extent to which the Information contained in this publication is applicable to an order at the time the order is placed.

All Information given herein is believed to be accurate and reliable, but it is presented without guarantee, warranty, or responsibility of any kind, expressed or implied.

Statements of suitability for certain applications are based on KEMET Electronics Corporation's ("KEMET") knowledge of typical operating conditions for such applications, but are not intended to constitute – and KEMET specifically disclaims – any warranty concerning suitability for a specific customer application or use. The Information is intended for use only by customers who have the requisite experience and capability to determine the correct products for their application. Any technical advice inferred from this Information or otherwise provided by KEMET with reference to the use of KEMET's products is given gratis, and KEMET assumes no obligation or liability for the advice given or results obtained.

Although KEMET designs and manufactures its products to the most stringent quality and safety standards, given the current state of the art, isolated component failures may still occur. Accordingly, customer applications which require a high degree of reliability or safety should employ suitable designs or other safeguards (such as installation of protective circuitry or redundancies) in order to ensure that the failure of an electrical component does not result in a risk of personal injury or property damage.

Although all product—related warnings, cautions and notes must be observed, the customer should not assume that all safety measures are indicted or that other measures may not be required.
