

CYPRESS

COMLINK™ SERIES

CY2CC1810

# 1:10 Clock Fanout Buffer with Output Enable

## Features

- Low-voltage operation
- $V_{DD}$  range from 2.5 to 3.3V
- 1:10 fanout
- Drives either a 50-ohm or 75-ohm transmission line
- Over voltage tolerant input hot swappable
- Low input capacitance
- Low output skew
- Low propagation delay
- Typical (tpd < 4 ns)
- High-speed operation > 200 MHz
- LVTTTL-/LVCMOS-compatible input
  - Output disable to three-state
- Industrial versions available
- Packages available include: SOIC/SSOP

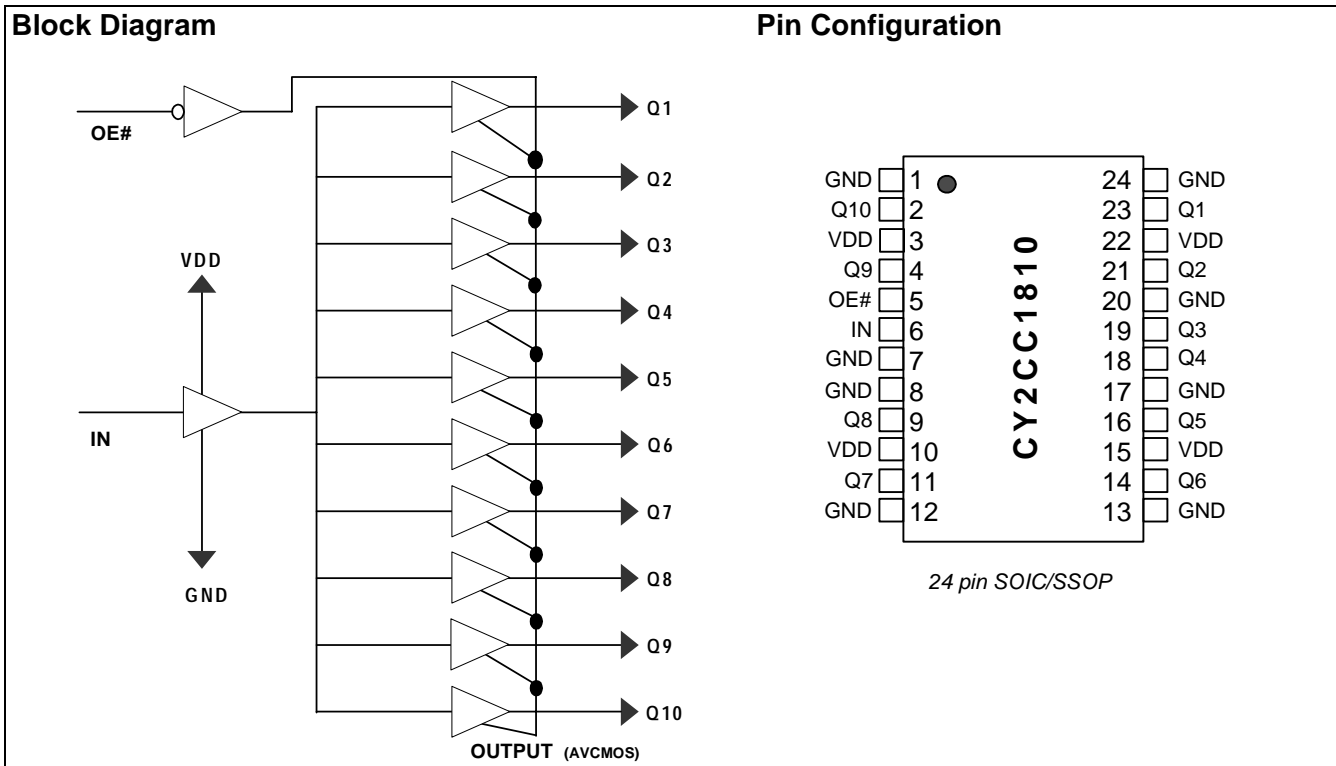

## Description

The Cypress series of network circuits is produced using advanced 0.35-micron CMOS technology, achieving the industries fastest logic and buffers.

The Cypress CY2CC1810 fanout buffer features one input and ten three-state outputs.

Designed for data communications clock management applications, the large fanout from a single input reduces loading on the input clock.

AVCMOS-type outputs dynamically adjust for variable impedance-matching and eliminate the need for series-damping resistors; they also reduce noise overall.

## Pin Description

Pin Number	Pin Name	Pin Description	
1,7,8,12,13,17,20,24	$G_{ND}$	Ground	Power
3,10,15,22	$V_{DD}$	Power Supply	Power

**Note:**

1. Stresses greater than those listed under absolute maximum ratings may cause permanent damage to the device. This is intended to be a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operation sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
2. Multiple Supplies: The voltage on any input or I/O pin cannot exceed the power pin during power-up. Power supply sequencing is NOT required.
